Atlantis, Ragnarok, Fire in the Sky Riddick Dawson, 2025-10-08

In *Atlantis Ragnarok* the calm mask of Earth's history is stripped away to reveal the chaos beneath From the great ice sheets of the Pleistocene to the shattered gravels of forgotten continents this work revisits the nineteenth century debate between gradualism and catastrophe through modern eyes Ignatius Donnelly's once ridiculed vision of a world consumed by cosmic fire becomes the entry point for a sweeping investigation of impacts floods and mythic memory a scientific and poetic synthesis that connects geology archaeology and ancient storytelling Across pages of gravel glass and flame the reader journeys from Victorian laboratories to the edges of the solar system tracing how celestial events have repeatedly rewritten the face of the planet Drawing on new research in impact stratigraphy palaeoclimatology and myth archaeology *Atlantis Ragnarok* shows that the legends of floods

and falling stars were not mere metaphors but recollections of real catastrophe The Norse twilight the biblical deluge the Hopi fire rain all are woven into one planetary chronicle of destruction and renewal Combining historical scholarship modern science and literary eloquence this volume restores awe to geology and meaning to myth Atlantis Ragnarok is both a meditation on humanity's amnesia and a rediscovery of the cosmic forces that shaped our world a reminder that stability is illusion and that within every layer of Earth lies the memory of the sky's fire

Catalogue of the Circulating Department Free Public Library (Worcester, Mass.), 1884 **Catastrophic Thinking** David Sepkoski, 2020-09-24 A history of scientific ideas about extinction that explains why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction We live in an age in which we are repeatedly reminded by scientists by the media by popular culture of the looming threat of mass extinction We're told that human activity is currently producing a sixth mass extinction perhaps of even greater magnitude than the five previous geological catastrophes that drastically altered life on Earth Indeed there is a very real concern that the human species may itself be poised to go the way of the dinosaurs victims of the most recent mass extinction some 65 million years ago How we interpret the causes and consequences of extinction and their ensuing moral imperatives is deeply embedded in the cultural values of any given historical moment And as David Sepkoski reveals the history of scientific ideas about extinction over the past two hundred years as both a past and a current process is implicated in major changes in the way Western society has approached biological and cultural diversity It seems self-evident to most of us that diverse ecosystems and societies are intrinsically valuable but the current fascination with diversity is a relatively recent phenomenon In fact the way we value diversity depends crucially on our sense that it is precarious that it is something actively threatened and that its loss could have profound consequences In *Catastrophic Thinking* Sepkoski uncovers how and why we learned to value diversity as a precious resource at the same time as we learned to think catastrophically about extinction
