Acid Waters in Wales R.W. Edwards,A.S. Gee,J.H. Stoner,2012-12-06 This book brings together research into the process of stream acidification and its impact on Welsh surface waters carried out over the past decade or so It is perhaps surprising that not until the 1980 s was clear evidence of stream acidification assembled In Wales concerns over pollution had focused water quality sampling principally on the areas of traditional heavy industry and large urban popula tions served by inadequate sewerage systems and sewage disposal arrange ments Mistakenly it had been assumed that with its prevailing westerly winds Wales would receive precipitation substantially unpolluted by the industrial and urban emissions from Britain and mainland Europe Assurance of the high quality of Welsh upland streams the traditional nursery ground of salmonids was eroded particularly by studies in the vicinity of Llyn Brianne reservoir in the catchment of the River Tywi of Central Wales These demonstrated a clear correspondence between the biological quality and fisheries of streams in the catchment and aspects of stream chemistry par ticularly pH aluminium and calcium on the one hand and catchment land use on the other It is salutary to record that the first signals were of an inexplicable failure of the runs of migratory salmonids into the upper catchment occupied by the Llyn Brianne reservoir and its influent streams and the failure to restore the fishery by re stocking with eggs and fry Only then did the significance of the recent decline in some other upland lake and reservoir fisheries in Wales become apparent Jonathan Cowie,2013 The second edition of this acclaimed text has been fully updated and substantially expanded to include the considerable developments since publication of the first edition in our understanding of the science of climate change its impacts on biological and human systems and developments in climate policy Written in an accessible style it provides a broad review of past present and likely future climate change from the viewpoints of biology ecology human ecology and Earth system science It will again prove to be invaluable to a wide range of readers from students in the life sciences who need a brief overview of the basics of climate science to atmospheric

science geography geoscience and environmental science students who need to understand the biological and human ecological implications of climate change It is also a valuable reference text for those involved in environmental monitoring conservation and policy making
