Referring To Space Studies In Austronesian And Papuan Languages:

Referring to Space Gunter Senft, 1997 The first aim of this anthology is to illustrate the variety of resources that Austronesian and Papuan languages offer their speakers for referring to space The languages here described are spread from Madagascar to Tonga and there are many differences between them They also offer a striking contrast to Indo European languages and call into question universalistic claims about human spatial concepts and spatial reference based solely on evidence from Indo European languages and their speakers There are however striking parallels between the kinds of systems that languages offer and that their speakers employ when referring to space Understanding the differences in the ways that coordinate systems are used requires not only linguistic but also cultural historical and geographical knowledge Thus the second aim of the collection is to illustrate the necessity of an interdisciplinary approach to the topic of space if we are to understand the underlying logic of conceptions of space manifest in verbal expressions The first three papers offer overviews of the conception of space in Austronesian languages and analyse the coordinate systems employed for spatial reference The seven papers which follow offer anthropological linguistic descriptions of directionals and locatives in Austronesian and Papuan languages and the last three contributions offer a more structurally oriented perspective The Oxford Handbook of Cognitive Linguistics Dirk Geeraerts, Hubert Cuyckens, 2010-06-09 The Oxford Handbook of Cognitive Linguistics presents a comprehensive overview of the main theoretical concepts and descriptive theoretical models of Cognitive Linguistics and covers its various subfields theoretical as well as applied The first twenty chapters give readers the opportunity to acquire a thorough knowledge of the fundamental analytic concepts and descriptive models of Cognitive Linguistics and their background The book starts with a set of chapters discussing different conceptual phenomena that are recognized as key concepts in Cognitive Linguistics prototypicality metaphor metonymy embodiment perspectivization mental spaces etc A second set of chapters deals with Cognitive Grammar Construction Grammar and Word Grammar which each in their own way bring together the basic concepts into a particular theory of grammar and a specific model for the description of grammatical phenomena Special attention is given to the interrelation between Cognitive and Construction Grammar A third set of chapters compares Cognitive Linguistics with other forms of linguistic research functional linguistics autonomous linguistics and the history of linguistics thus giving a reader a better grip on the position of Cognitive Linguistics within the landscape of linguistics at large The remaining chapters apply these basic notions to various more specific linguistic domains illustrating how Cognitive Linguistics deals with the traditional linguistic subdomains phonology morphology lexicon syntax text and discourse and demonstrating how it handles linguistic variation and change Finally they consider its importance in the domain of Applied Linguistics and look at interdisciplinary links with research fields such as philosophy and psychology With a well known cast of contributors from around the world this reference work will be of interest to researchers and advanced students in cognitive linguistics psychology cognitive science and anthropology

Neglected Aspects of Motion-Event Description Laure Sarda, Benjamin Fagard, 2022-07-15 The idea of this book on Neglected Aspects of Motion Event Description comes from the observation that over the last 30 years much attention has been devoted to the manner path divide in relation to the distinction between Verb Framed and Satellite Framed languages This mainstream focus has left aside other aspects of motion event descriptions The chapters of this volume take an in depth look at three less studied aspects of motion expression The first part of the book focuses on directional deixis especially in relation to associated motion and visual motion The second part explores variations in Source Goal asymmetries The third part investigates different types of motion event constructions e g with various types of co events Many languages are taken into consideration throughout the 11 chapters which gives the volume a clear typological dimension This book is intended for students and academics interested in motion spatial semantics typological variation and cognitive linguistics **Koromu**

(Kesawai) Carol Priestley, 2019-11-18 This book is a grammatical description of Koromu or Kesawai an endangered and previously undescribed language in Papua New Guinea s Ramu Valley Koromu belongs to the Madang subgroup of the putative Trans New Guinea family The grammar covers the structures of the language with an emphasis on information structure Geographic linguistic social and historical setting are described as well as phonology and morphophonology The book examines the morphosyntactic structures of the language covering basic clause structure word classes phrase structures and structures of spatial reference verbal morphology serial verb constructions experiencer object constructions and the various constructions of clause combining clause chaining complement clauses adverbial and relative clauses Chapters also deal with noun phrase non realisation and morphological signaling of prominence and show how links and tails are encoded grammatically Appendices contain texts and a wordlist *The Languages of the Kimberley, Western Australia*

William B. McGregor, 2013-03-07 The Kimberley the far north west of Australia is one of the most linguistically diverse regions of the continent Some fifty five Aboriginal languages belonging to five different families are spoken within its borders Few of these languages are currently being passed on to children most of whom speak Kriol a new language that arose about half a century ago from an earlier Pidgin English or Aboriginal English a dialect of English as their mother tongue and usual language of communication This book describes the Aboriginal languages spoken today and in the recent past in this region

The Oxford Guide to the Malayo-Polynesian Languages of Southeast Asia Alexander Adelaar, Antoinette Schapper, 2024-06-27 This volume presents the most wide ranging treatment available today of the Malayo Polynesian languages of Southeast Asia and their outliers It offers a comprehensive account of the historical relations and typological diversity in the group including current debates in their prehistories and descriptive priorities for future study **Spirits**

and Ships Andrea Acri, 2017-03-13 This volume seeks to foreground a borderless history and geography of South Southeast and East Asian littoral zones that would be maritime focused and thereby explore the ancient connections and dynamics of interaction that favoured the encounters among the cultures found throughout the region stretching from the Indian Ocean

littorals to the Western Pacific from the early historical period to the present Transcending the artificial boundaries of macro regions and nation states and trying to bridge the arbitrary divide between inherently cosmopolitan high cultures e g Sanskritic Sinitic or Islamicate and local or indigenous cultures this multidisciplinary volume explores the metaphor of Monsoon Asia as a vast geo environmental area inhabited by speakers of numerous language phyla which for millennia has formed an integrated system of littorals where crops goods ideas cosmologies and ritual practices circulated on the sea routes governed by the seasonal monsoon winds The collective body of work presented in the volume describes Monsoon Asia as an ideal theatre for circulatory dynamics of cultural transfer interaction acceptance selection and avoidance and argues that despite the rich ethnic linguistic and sociocultural diversity a shared pattern of values norms and cultural models is discernible throughout the region

The Language of Mathematics Bill Barton, 2007-12-24 The book emerges from several contemporary concerns in mathematics language and mathematics education However the book takes a different stance with respect to language by combining discussion of linguistics and mathematics using examples from each to illustrate the other The picture that emerges is of a subject that is much more contingent much more relative much more subject to human experience than is usually accepted Another way of expressing this is that the thesis of the book takes the idea of mathematics as a human creation and using the evidence from language comes to more radical conclusions than most writers allow

Spatial Expression in Caac Aurélie Cauchard, 2018-07-09 In this study the author describes the linguistic expression of space in Caac an endangered and under documented Oceanic language spoken in New Caledonia from both a descriptive and theoretical perspective Part I provides a concise description of Caac grammar presenting a first formal portrait of this language to the reader Part II describes the formal and semantic features of the linguistic resources available in Caac to encode spatial relationships Part III presents the theoretical framework based on and exploring further the vector analysis developed by Bohnemeyer 2012 and Bohnemeyer Levinson 1996 2003 Bohnemeyer Levinson not dated with an analysis of deictic expressions within a single framework Special attention moreover is given to the use of Caac absolute and deictic directionals in spatial constructions involving Fictive Motion The analysis of Caac data leads us to introduce an additional category of Fictive Motion beyond those previously recognised in the literature labelled here Anticipated Paths which in turn shed new light on the nature of vectors and the relationship between location motion and orientation

Space in Language and Cognition Stephen C. Levinson, 2003-03-20 Languages differ in how they describe space and such differences between languages can be used to explore the relation between language and thought This 2003 book shows that even in a core cognitive domain like spatial thinking language influences how people think memorize and reason about spatial relations and directions After outlining a typology of spatial coordinate systems in language and cognition it is shown that not all languages use all types and that non linguistic cognition mirrors the systems available in the local language The book reports on collaborative interdisciplinary research involving anthropologists linguists and psychologists conducted in

many languages and cultures around the world which establishes this robust correlation The overall results suggest that thinking in the cognitive sciences underestimates the transformative power of language on thinking The book will be of interest to linguists psychologists anthropologists and philosophers and especially to students of spatial cognition
