Reflections On Hydrology Science And Practice:

Reflections in Hydrology Nathan Buras, 1997-01-23 Published by the American Geophysical Union as part of the Special Publications Series In the early 1980s the Department of Hydrology and Water Resources at the University of Arizona started a tradition an annual public lecture to perpetuate the memory of one of its most original thinkers who passed away at an early age Chester C Kisiel At that time the department was quite young a little over ten years old and so was the University of Arizona not quite a century old The overall atmosphere was extremely stimulating faculty members and students were curious and excited wishing to learn and understand more about the natural phenomena that transform precipitation into water and the possible development of regional waters for human uses The preparation and delivery of these lectures were entrusted by the department to outstanding scientists in the fields of hydrology and water resources thus attaining a double objective On the one hand the lectures became salient points on a time trajectory when specific facets of the broad agenda of scientific issues studied in the department were brought to the limelight of a public discourse On the other hand the lectures also provided opportunities for reflection on contemporary problems and on the approaches for their study and analysis

Hydropedology Henry Lin, 2012-07-09 Hydropedology is a microcosm for what is happening in Soil Science Once a staid discipline found in schools of agriculture devoted to increasing crop yield soil science is transforming itself into an interdisciplinary mulch with great significance not only for food production but also climate change ecology preservation of natural resources forestry and carbon sequestration Hydropedology brings together pedology soil characteristics with hydrology movement of water to understand and achieve the goals now associated with modern soil science The first book of its kind in the market Highly interdisciplinary involving new thinking and synergistic approaches Stimulating case studies demonstrate the need for hydropedology in various practical applications Future directions and new approaches are present to advance this emerging interdisciplinary science

Modelling Interception and Transpiration at Monthly Time Steps Maria Margaretha de Groen, 2002-06-01 The book presents improved equations for monthly water resources models in particular for interception and transpiration Most of the existing monthly models do not make a distinction between interception and transpiration while this distinction is very important for management purposes Interception is direct feedback to the atmosphere important to sustain rainfall Transpiration is a good indicator for plant growth and biomass production This distinction also contributes to the estimation of recharge and therewith of runoff The derivations are based on the Markov theory for the occurrence of rain days The methodology can be used on the basis of an analysis of a few time series of daily data at a spatial scale of 300km and not necessarily of the same period as the monthly data Zimbabwe served as the case study but derived equations can be used worldwide as long as the relationship between the monthly rainfall and the mean number of rain days

can be established *Keeping God's Earth* Noah Toly, Noah J. Toly, Daniel I. Block, 2010-05-26 Diversity of life Water resources Global climate change Cities and global environmental issues We all know being a Christian involves ethical responsibility But what exactly are our environmental obligations This unique volume teams up scientists with biblical scholars to help us discern just not that question What does the Lord require of us **Managing Urban Water Supply** D.E. Agthe, R.B. Billings, N. Buras, 2013-06-29 We the editors have long believed that a strong knowledge of relatively simple economic and engineering concepts is valuable in solving water management problems The lack of such knowledge has been apparent to us in some of the journal articles research proposals and books we have reviewed The articles which have been written concerning specific local water economies and management issues are scattered over a wide variety of journals making them hard to access Most of the extensive water resources literature is concerned with large regional water projects or with narrow technical and regional issues This book was written to make practical economic and engineering concepts readily available to urban water supply managers thereby filling a gap in the available literature It is concerned with decisions made daily monthly or annually by managers of urban water supply systems The book includes basic chapters presenting supply and cost concepts calculation of demand elasticities use of marketing concepts public goods analysis water markets industrial water demand and the use of price in water conservation The authors have included multiple examples of how these concepts can aid in managing urban water supply The water provider is generally a governmental entity or regulated private utility Most books on public utilities and their management emphasize gas electricity or telephone rather than water Water is different because of many variations in quality by source and the necessity for proper disposal of waste water **Climate Change Effects on Groundwater Resources** Holger Treidel, Jose Luis Martin-Bordes, Jason J. Gurdak, 2011-12-02 Climate change is expected to modify the hydrological cycle and affect freshwater resources Groundwater is a critical source of fresh drinking water for almost half of the world's population and it also supplies irrigated agriculture Groundwater is also important in sustaining streams lakes wetlands and associated ecosystems But despite this knowledge about the impact of climate change on groundwater quantity and quality is limited Direct impacts of climate change on natural processes groundwater recharge discharge storage saltwater intrusion biogeochemical reactions chemical fate and transport may be exacerbated by human activities indirect impacts Increased groundwater abstraction for example may be needed in areas with unsustainable or contaminated surface water resources caused by droughts and floods Climate change effects on groundwater resources are therefore closely linked to other global change drivers including population growth urbanization and land use change coupled with other socio economic and political trends Groundwater response to global changes is a complex function that depends on climate change and variability topography aquifer characteristics vegetation dynamics and human activities This volume contains case studies from diverse aquifer systems scientific methods and climatic settings that have been conducted globally under the framework of the UNESCO IHP project Groundwater

Resources Assessment under the Pressures of Humanity and Climate Change GRAPHIC This book presents a current and global synthesis of scientific findings and policy recommendations for scientists water managers and policy makers towards adaptive management of groundwater sustainability under future climate change and variability

Encyclopedia of Agrophysics Jan Gliński, Józef Horabik, Jerzy Lipiec, 2011-06-07 This Encyclopedia of Agrophysics will provide up to date information on the physical properties and processes affecting the quality of the environment and plant production It will be a first up volume which will nicely complement the recently published Encyclopedia of Soil Science November 2007 which was published in the same series In a single authoritative volume a collection of about 250 informative articles and ca 400 glossary terms covering all aspects of agrophysics will be presented The authors will be renowned specialists in various aspects in agrophysics from a wide variety of countries Agrophysics is important both for research and practical use not only in agriculture but also in areas like environmental science land reclamation food processing etc Agrophysics is a relatively new interdisciplinary field closely related to Agrochemistry Agrobiolology Agroclimatology and Agroecology Nowadays it has been fully accepted as an agricultural and environmental discipline As such this Encyclopedia volume will be an indispensable working tool for scientists and practitioners from different disciplines like agriculture soil science geosciences environmental science geography and engineering

Climate Change Binayak Ray, 2011-09-16 Notwithstanding denials by climate skeptics the global scientific community considers the world environment is rapidly worsening They argue that failure to adopt measures to reduce CO₂ gas emission in the atmosphere could lead to disastrous social economic politico security and environmental consequences Skeptics argue that climate changes are due to nature's own cyclical phenomenon They fail to understand that climatology as a scientific discipline is in its infancy but overwhelming evidence suggests that human activities are responsible for this Smart campaigning and some mistakes by the IPCC in its 2007 report enabled skeptics to derail the efforts to adopt a legally binding CO₂ emission target in Copenhagen in 2009 Global political leadership collectively failed to rise above their narrow national interest in Copenhagen Last moment efforts led to a resolution but a resolution without vision or teeth Given large socio economic differences between countries a legally binding CO₂ reduction resolution is anathema to many countries The leadership failed to understand that one size prescription would not fit all as internal political compulsions dominate countries policy position on climate change issues South Asia is politically complex The political and economic rivalry between China and India impacts differently on policy cooperation issues in regional countries but on climate change issues policy response require a regional approach as impacts do not stop at political boundaries Water sharing is critical for India Pakistan and Bangladesh India and Pakistan are virtually water scarce countries and most of Bangladesh's freshwater comes from outside the country These countries have been using groundwater at an unsustainable rate and in many parts it requires treatment Collectively they house largest number of poverty stricken people on earth Food production is declining rising food prices are creating a huge fiscal burden UN
