Research in Collegiate Mathematics Education IV Ed Dubinsky,2000 This fourth volume of Research in Collegiate Mathematics Education RCME IV reflects the themes of student learning and calculus Included are overviews of calculus reform in France and in the U S and large scale and small scale longitudinal comparisons of students enrolled in first year reform courses and in traditional courses The work continues with detailed studies relating students understanding of calculus and associated topics Direct focus is then placed on instruction and student comprehension of courses other than calculus namely abstract algebra and number theory The volume concludes with a study of a concept that overlaps the areas of focus quantifiers The book clearly reflects the trend towards a growing community of researchers who systematically gather and distill data regarding collegiate mathematics teaching and learning This series is published in cooperation with the Mathematical Association of America

Research in Collegiate Mathematics Education Annie Selden,Ed Dubinsky,2003

The Teaching and Learning of Mathematics at University Level Derek Holton,2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All of these Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past

Volume 1: Research Syntheses M. Kathleen Heid,Glendon W. Blume,2008-07-01 According to NCTM s Principles and Standards for School mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and

learning of mathematics and these approaches have been examined by researchers world wide The first volume provides insight into what research suggests about the nature of mathematics learning in technological environments Included in this volume are syntheses of research on technology in the learning of rational number algebra elementary and secondary geometry mathematical modeling and calculus Additional chapters synthesize research on technology in the practice of teaching and on equity issues in the use of technology in mathematics instruction Instead of simply reporting achievement scores of students who use technology in their learning authors provide thoughtful analyses of bodies of research with the goal of understanding the ways in which technology affects what and how students learn Each of the chapters in this volume is written by a team of experts whose own research has provided important guidance to the field **Dude, Can You Count?**

Stories, Challenges and Adventures in Mathematics Christian Constanda, 2009-12-01 Imagine algebra class meets The Hitchhiker's Guide to the Galaxy Meet JJ an unusual character with a unique vantage position from which he can measure and monitor humanity's progress Armed with a device that compels all around it to tell the truth JJ offers a satirical evaluation of our attitudes to numeracy and logic touching upon several aspects of life on Earth along the way from the criminal justice system and people's use of language to highway driving and modern art A collection of mathematically flavored stories and jokes interlaced with puzzles paradoxes and problems fuse together in an entertaining free flowing narrative that will engage and amuse anyone with an interest in the issues confronting society today JJ demonstrates how a lack of elementary mathematical knowledge can taint our work and general thinking and reflects upon the importance of what is arguably our most valuable weapon against ignorance a sound mathematical education **Research in Collegiate**

Mathematics Education VI Fernando Hitt, Guershon Harel, Annie Selden, 2006 The sixth volume of Research in Collegiate Mathematics Education presents state of the art research on understanding teaching and learning mathematics at the postsecondary level The articles advance our understanding of collegiate mathematics education while being readable by a wide audience of mathematicians interested in issues affecting their own students This is a collection of useful and informative research regarding the ways our students think about and learn mathematics The volume opens with studies on students' experiences with calculus reform and on the effects of concept based calculus instruction The next study uses technology and the van Hiele framework to help students construct concept images of sequential convergence The volume continues with studies on developing and assessing specific competencies in real analysis on introductory complex analysis and on using geometry in teaching and learning linear algebra It closes with a study on the processes used in proof construction and another on the transition to graduate studies in mathematics Whether they are specialists in education or mathematicians interested in finding out about the field readers will obtain new insights about teaching and learning and will take away ideas that they can use Information for our distributors This series is published in cooperation with the Mathematical Association of America
