RoboCup 2004: Robot Soccer World Cup VIII Daniele Nardi, Martin Riedmiller, Claude Sammut, José Santos-Victor, 2005-03-01 These are the proceedings of the RoboCup 2004 Symposium held at the Instituto Superior Técnico in Lisbon Portugal in conjunction with the RoboCup competition The papers presented here document the many innovations in robotics that result from RoboCup A problem in any branch of science or engineering is how to devise tests that can provide objective comparisons between alternative methods In recent years competitive engineering challenges have been established to motivate researchers to tackle difficult problems while providing a framework for the comparison of results RoboCup was one of the first such competitions and has been a model for the organization of challenges following sound scientific principles In addition to the competition the associated symposium provides a forum for researchers to present refereed papers But for RoboCup the symposium has the greater goal of encouraging the exchange of ideas between teams so that the competition as a whole progresses from year to year and strengthens its contribution to robotics One hundred and eighteen papers were submitted to the Symposium Each paper was reviewed by at least two international referees 30 papers were accepted for presentation at the Symposium as full papers and a further 38 were accepted for poster presentation The quality of the Symposium could not be maintained without the support of the authors and the generous assistance of the referees

RoboCup 2002: Robot Soccer World Cup VI Gal A. Kaminka, Pedro U. Lima, Raul Rojas, 2003-08-04 RoboCup 2002 the 6th Robot World Cup Soccer and Rescue Competitions and Conference took place during June 19-25 2002 at the Fukuoka Dome main venue in Fukuoka Japan It was by far the RoboCup event with the

largest number of registered participants 1004 persons distributed in 188 teams from 29 countries and visitors around 120 000 persons As was done in its previous editions since 1997 the event included several robotic competitions and an international symposium The papers and posters presented at the symposium constitute the main part of this book League reports in the national section describe significant advances in each league and the results The symposium organizers received 76 submissions among which 17 papers 22% were accepted for oral presentation at the symposium first section of the book and 21 papers 29% were accepted as posters second section of the book Most papers were evaluated by three reviewers each chosen from the members of the International Program Committee IPC The IPC consisted of a balanced combination of regular RoboCup participants and researchers from outside this community The reviewers worked hard to guarantee a fair review process the result of their work was a high quality symposium with very interesting presentations

Robot Soccer Vladan Papić, 2010-01-01 The idea of using soccer game for promoting science and technology of artificial intelligence and robotics was presented in the early 90s of the last century Researchers in many different scientific fields all over the world recognized this idea as an inspiring challenge Robot soccer research is interdisciplinary complex demanding but most of all fun and motivational Obtained knowledge and results of research can easily be transferred and applied to numerous applications and projects dealing with relating fields such as robotics electronics mechanical engineering artificial intelligence etc As a consequence we are witnesses of rapid advancement in this field with numerous robot soccer competitions and a vast number of teams and team members The best illustration is numbers from the RoboCup 2009 world championship held in Graz Austria which gathered around 2300 participants in over 400 teams from 44 nations Attendance numbers at various robot soccer events show that interest in robot soccer goes beyond the academic and R

Butz,Olivier Sigaud,Pierre Gérard,2004-01-21 The interdisciplinary topic of anticipation attracting attention from computer scientists psychologists philosophers neuroscientists and biologists is a rather new and often misunderstood matter of research This book attempts to establish anticipation as a research topic and encourage further research and development work First the book presents philosophical thoughts and concepts to stimulate the reader's concern about the topic Fundamental cognitive psychology experiments then confirm the existence of anticipatory behavior in animals and humans and outline a first framework of anticipatory learning

and behavior Next several distinctions and frameworks of anticipatory processes are discussed including first implementations of these concepts Finally several anticipatory systems and studies on anticipatory behavior are presented

Environments for Multi-Agent Systems Danny Weyns, H. Van Dyke Parunak, Fabien Michel, 2005-02-18 The modern field of multiagent systems has developed from two main lines of earlier research Its practitioners generally regard it as a form of artificial intelligence AI Some of its earliest work was reported in a series of workshops in the US dating from 1980 revealingly entitled Distributed Artificial Intelligence and pioneers often quoted a statement attributed to Nils Nilsson that all AI is distributed The locus of classical AI was what happens in the head of a single agent and much MAS research reflects this heritage with its emphasis on detailed modeling of the mental state and processes of individual agents From this perspective intelligence is ultimately the purview of a single mind though it can be amplified by appropriate interactions with other minds These interactions are typically mediated by structured protocols of various sorts modeled on human conversational behavior But the modern field of MAS was not born of a single parent A few searchers have persistently advocated ideas from the field of artificial life A-Life These scientists were impressed by the complex adaptive behaviors of communities of animals often extremely simple animals such as insects or even microorganisms The computational models on which they drew were often created by biologists who used them not to solve practical engineering problems but to test their hypotheses about the mechanisms used by natural systems In the artificial life model intelligence need not reside in a single agent but emerges at the level of the community from the nonlinear interactions among agents cause the individual agents are often subcognitive their interactions cannot be modeled by protocols that presume linguistic competence Reasoning, Action and Interaction in AI Theories and Systems Oliviero Stock, 2006-09-04 The present book is a festschrift in honor of Luigia Carlucci Aiello The 18 articles included are written by former students friends and international colleagues who have cooperated with Luigia Carlucci Aiello scientifically or in AI boards or committees The contributions by reputed researchers span a wide range of AI topics and reflect the breadth and depth of Aiello's own work
