Robotics and Cognitive Approaches to Spatial Mapping Margaret E. Jefferies, Wai-Kiang Yeap, 2008-01-10 This important work is an attempt to synthesize two areas that need to be treated in tandem The book brings together the fields of robot spatial mapping and cognitive spatial mapping which share some common core problems One would expect some cross fertilization of research between the two areas to have occurred yet this has begun only recently There are now signs that some synthesis is happening so this work is a timely one for students and engineers in robotics *Robot Navigation from Nature* Michael John Milford, 2008-02-11 This pioneering book describes the development of a robot mapping and navigation system inspired by models of the neural mechanisms underlying spatial navigation in the rodent hippocampus Computational models of animal navigation systems have traditionally had limited performance when implemented on robots This is the first research to test existing models of rodent spatial mapping and navigation on robots in large challenging real world environments *ROMANSY 16* Teresa Zielinska, Cezary Zielinski, 2013-11-22 The aim of this publication is to present the research results in robotics that are now state of the art and indicate the possible future lines of development To effectively work and cooperate with us robots must exhibit abilities that are comparable to those of humans The book describes the ongoing efforts to design and develop human friendly robotic systems that can safely and effectively interact and work with humans Techniques for 3-D Machine Perception A.
