**The World Yearbook of Robotics Research and Development** Sbornik Statei,2013-04-17 How quickly the technological flavour of the month changes At the beginning of the 1980 s many saw robotics as being something of a panacea for those problems in the manufacturing industries which had been exacerbated by the world recession Those working at the time in the field of robotics stressed that robots themselves were only part of the solution Yet in many quarters the hype for the new technology apparently knew few bounds resulting inexorably in many industries painfully discovering for themselves a new realism closely followed by disillusionment In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible highly sensory and integrated systems capable of handling a very diverse product range through to comparatively inflexible high volume systems which can merely handle slightly different variations of the same basic product As a result of the one buzzword referring to such a variety of actual system types the disillusionment which started to become apparent during the early 1980 s acted as something of a double edged sword A given company might consider a particular robotics based technological solution to its production problems find that it was unsuitable and so renounce all robotics approaches as inappropriate Yet just because one position on that spectrum of technological solutions was unsuitable for the company should not have led them to assume that there was no other robotics solution that was appropriate

**Computer-Integrated Manufacturing Handbook** V.D. Hunt,2012-12-06 Manufacturing has entered the early stages of a revolutionary period caused by the convergence of three powerful trends The rapid advancement and spread of manufacturing capabilities worldwide has created intense competition on a global scale The emergence of advanced manufacturing technologies is dramatically changing both the products and processes of modern manufacturing Changes in traditional management and labor practices organizational structures and decision making criteria represent new sources of competitiveness and introduce new strategic opportunities These trends are interrelated and their effects are already being felt by the u s manufacturing community Future competitiveness for manufacturers worldwide will depend on their response to these trends Based on the recent performance of u s manufacturers efforts to respond to the challenges posed by new competition technology and managerial opportunities have been slow and inadequate Domestic markets that were once secure have been assailed by a growing number of foreign competitors producing high quality goods at low prices In a number of areas such as employment capacity utilization research and development expenditures and capital investment trends in u s manufacturing over the last decade have been unfavorable or have not kept pace with major foreign competitors such as Japan There is substantial evidence that many u s manufacturers have neglected the manufacturing function have overemphasized product development at the expense of process improvements and have not begun to make the adjustments that will be necessary to be competitive

**Robot Reliability and Safety** B.S. Dhillon,2012-12-06 Robots are

increasingly being used in industry to perform various types of tasks Some of the tasks performed by robots in industry are spot welding materials handling arc welding and routing The population of robots is growing at a significant rate in various parts of the world for example in 1984 a report published by the British Robot Association indicated a robot population distribution between Japan 64 600 Western Europe 20 500 and the United States 13 000 This shows a significant number of robots in use Data available for West Germany and the United Kingdom indicate that in 1977 there were 541 and 80 robots in use respectively and in 1984 these numbers went up to 6600 and 2623 respectively Just as for other engineering products the reliability and safety of robots are important A robot has to be safe and reliable An unreliable robot may become the cause of unsafe conditions high maintenance costs inconvenience etc Robots make use of electrical mechanical pneumatic electronic and hydraulic parts This makes their reliability problem a challenging task because of the many different sources of failures According to some published literature the best mean time between failures MTBF achieved by robots is only 2500 hours This means there is definite room for further improvement in robot reliability With respect to safety there have been five fatal accidents involving robots since 1978 The McGraw-Hill Illustrated Encyclopedia of Robotics & Artificial Intelligence Stan Gibilisco,1994 Ideal for hobbyists students and experimenters this first of its kind encyclopedia offers an introductory overview of robotics and artificial intelligence It contains 500 alphabetically arranged densely illustrated articles extensive cross referencing and a comprehensive bibliography to help readers locate additional information
