Kyriakopoulos, 2024-02-13 For the second year in a row we are very happy to offer our readership an ebook of 10 articles that have achieved widespread acceptance within our core audience and beyond This time it concerns articles published in 2023 a landmark year for this journal as it was officially awarded its first impact factor These papers are among the large number that attained significant interest last year but we selected just 10 which we consider to be the best These articles have already made an impact in the form of original research or comprehensive reviews As the Field Chief Editor I would like to stand alongside our journal staff to honor all authors who contributed very high level papers to the journal last year and are contributing to our success We also thank the editors and reviewers of these papers and of all papers this past year for Computational Geometry Mark de Berg, Marc van Kreveld, Mark Overmars, Otfried their invaluable contribution Schwarzkopf, 2013-03-09 Computational geometry emerged from the field of algorithms design and analysis in the late 1970s It has grown into a recognized discipline with its own journals conferences and a large community of active researchers The suc cess of the field as a research discipline can on the one hand be explained from the beauty of the problems studied and the solutions obtained and on the other hand by the many application domains computer graphics geographic in formation systems GIS robotics and others in which geometric algorithms play a fundamental role For many geometric problems the early algorithmic solutions were either slow or difficult to understand and implement In recent years a number of new algorithmic techniques have been developed that improved and simplified many of the previous approaches In this textbook

we have tried to make these modem algorithmic solutions accessible to a large audience. The book has been written as a textbook for a course in computational geometry but it can also be used for self study. Human Factors and Cognitive Ergonomics in Advanced Industrial Human-Robot Interaction. Luca Gualtieri, Federico Fraboni, Erik A. Billing, Peter Thorvald, Patricia Helen Rosen, 2025-03-13. Advanced collaborative robotics will be one of the most promising technologies in future industry e.g. in manufacturing logistics or construction. Human robot interaction and collaboration will be crucial for enhancing the operator's work conditions and wellbeing as well as production performance. In that regard human factors with a special emphasis on cognitive ergonomics are fundamental to implementing safe fluent and efficient collaborative applications. Associated challenges and opportunities as well as design recommendations for interactive robotic systems must be considered likewise. The general target of the present Research Topic is to contribute to the expansion of knowledge in this field promoting research focused on the study of human factors and cognitive ergonomics in user centered and collaborative applications in industrial settings. In particular it aims to enhance the benefits related to human robot interaction by limiting as much as possible the negative effects on the user's safety and wellbeing that can arise from an improper design and management of collaborative applications as well as optimizing production system performances.
