The World Yearbook of Robotics Research and Development Sbornik Statei, 2013-04-17 How quickly the technological flavour of the month changes. At the beginning of the 1980 s many saw robotics as being something of a panacea for those problems in the manufacturing industries which had been exacerbated by the world recession. Those working at the time in the field of robotics stressed that robots themselves were only part of the solution. Yet in many quarters the hype for the new technology apparently knew few bounds, resulting inexorably in many industries painfully discovering for themselves a new realism, closely followed by disillusionment. In its wider sense the term robotics covers an extremely broad spectrum of technologies ranging from extremely flexible, highly sensory and integrated systems capable of handling a very diverse product range through to comparatively inflexible, high volume systems which can merely handle slightly different variations of the same basic product. As a result of the one buzzword referring to such a variety of actual system types, the disillusionment which started to become apparent during the early 1980 s acted as something of a double edged sword. A given company might consider a particular robotics based technological solution to its production problems, find that it was unsuitable, and so renounce all robotics approaches as inappropriate. Yet just because one position on that spectrum of technological solutions was unsuitable for the company, should not have led them to assume that there was no other robotics solution that was appropriate.

Robots in Industry Richard Kendall Miller, 1982 Provides the plastics manufacturing engineer with an understanding of robotics from the basics to installing the first robot in a plant. Specific applications include injection molding machines, parts trimming, palletizing. Describes each potential application.

Robotic Fabrication in Architecture, Art and Design 2014 Wes McGee, Monica Ponce

de Leon,2014-03-20 Robotic automation has become ubiquitous in the modern manufacturing landscape spanning an overwhelming range of processes and applications from small scale force controlled grinding operations for orthopedic joints to large scale composite manufacturing of aircraft fuselages Smart factories seamlessly linked via industrial networks and sensing have revolutionized mass production allowing for intelligent adaptive manufacturing processes across a broad spectrum of industries Against this background an emerging group of researchers designers and fabricators have begun to apply robotic technology in the pursuit of architecture art and design implementing them in a range of processes and scales Coupled with computational design tools the technology is no longer relegated to the repetitive production of the assembly line and is instead being employed for the mass customization of non standard components This radical shift in protocol has been enabled by the development of new design to production workflows and the recognition of robotic manipulators as multi functional fabrication platforms capable of being reconfigured to suit the specific needs of a process The emerging discourse surrounding robotic fabrication seeks to question the existing norms of manufacturing and has far reaching implications for the future of how architects artists and designers engage with materialization processes This book presents the proceedings of Rob Arch2014 the second international conference on robotic fabrication in architecture art and design It includes a Foreword by Sigrid Brell Cokcan and Johannes Braumann Association for Robots in Architecture The work contained traverses a wide range of contemporary topics from methodologies for incorporating dynamic material feedback into existing fabrication processes to novel interfaces for robotic programming to new processes for large scale automated construction The latent argument behind this research is that the term file to factory must not be a reductive celebration of expediency but instead a perpetual challenge to increase the quality of feedback between design matter and making
