Rock From Mars A True Detective Story On Two Planets:

The Rock From Mars Kathy Sawyer, 2006-02-14 In this riveting book acclaimed journalist Kathy Sawyer reveals the deepest mysteries of space and some of the most disturbing truths on Earth The Rock from Mars is the story of how two planets and the spheres of politics and science all collided at the end of the twentieth century It began sixteen million years ago An asteroid crashing into Mars sent fragments flying into space and eons later one was pulled by the Earth's gravity onto an icy wilderness near the southern pole There in 1984 a geologist named Roberta Score spotted it launching it on a roundabout path to fame and controversy In its new home at NASA's Johnson Space Center in Houston the rock languished on a shelf for nine years a victim of mistaken identity Then in 1993 the geochemist Donald Duck Mittlefehldt unmasked the rock as a Martian meteorite Before long specialist Chris Romanek detected signs of once living organisms on the meteorite And the obscure rock became a rock star But how did nine respected investigators come to make such startling claims about the rock that they triggered one of the most venomous scientific battles in modern memory The narrative traces the steps that led to this risky move and follows the rippling impact on the scientists' lives the future of space exploration the search for life on Mars and the struggle to understand the origins of life on Earth From the second the story broke in Science magazine in 1996 it spawned waves of excitement envy competitive zeal and calculation In academia in government agencies in laboratories around the world and even in the Oval Office where an inquisitive President Clinton had received the news in secret players of all kinds plotted their next moves Among them David McKay the dynamic geologist associated with the first moon landing who labored to achieve at long last a second success Bill Schopf of UCLA a researcher determined to remain at the top of his field and the first to challenge McKay's claims Dan Goldin the boss of NASA and Dick Morris the controversial presidential adviser who wanted to use the story for Clinton's reelection and unfortunately made sure it ended up in the diary of a 200 an hour call girl Impeccably researched and thrillingly involving Kathy Sawyer's *The Rock from Mars* is an exemplary work of modern nonfiction a vivid account of the all too human high stakes drive to learn our true place in the cosmic scheme

Origins of 21st-century Space Travel Glen R. Asner, Stephen J. Garber, 2019 As early as April 1999 NASA Administrator Dan Goldin established the Decadal Planning Team DPT to provide a

forum for future Agency leaders to begin considering goals more ambitious than sending humans on missions to near Earth destinations and robotic spacecraft to far off destinations with no relation between the two Goldin charged DPT with devising a long term strategy that would integrate the entire range of the Agency's capabilities in science and engineering robotic and human spaceflight to reach destinations beyond low Earth orbit When the Bush administration initiated interagency discussions in 2003 to consider a new spaceflight strategy NASA was prepared with technical and policy options as well as a team of individuals who had spent years preparing for the moment Although elements of the policy that President Bush announced at NASA Headquarters in January 2004 the Vision for Space Exploration VSE differed from the plans developed by DPT and its successor the NASA Exploration Team NeXT the benefits of preparation were unmistakable From the moment President Bush announced the VSE NASA stood ready to implement it Key decisions such as setting a termination date for Shuttle flights and initiating development of technologies for deep space exploration heralded a paradigm shift allowing both NASA and the U S space community to move beyond the infrastructure technologies and institutional arrangements that had sustained low Earth orbit operations for more than two decades This book provides a detailed historical account of the plans debates and decisions that opened the way for a new generation of spaceflight at the start of the 21st Century **American**
