The making of any sort of garden is not as easy as many people imagine and it is often these very people who fail to achieve their own wishes when the garden is made This is the reason why just dreaming up a garden and visualizing it whether it is an Alpine Garden a rock garden or an ordinary garden needs effort dedication and application on your part Far too frequently you plan the garden quickly You have not given the subject adequate thought You have rushed in the work with lots of haste and thus making a waste of perfectly good land The result more or less of failure is going to be a sad and annoying reminder of your lack of patience and technical knowledge Just imagine that you are making a garden in the same manner in which you are constructing your house This is a skilled job You are not going to start building your house without proper thought finances plans and timescales are you You are also going to take the expert assistance of a trained architect and contractors who are more skilled in building houses In the same manner many people fail to make their gardens what they might be just because they are too stubborn to call in an expert or because they do not possess some of the essential technical knowledge needed to make a garden When you are planning any sort of pattern of reasonable dimensions it may be wise to take some advice from an expert gardener Also remember that if you are taking professional advice you may need to look at his fees beforehand in order to prevent escalating costs right at the initial stages of the project itself This does not mean that you cannot have your own individual ideas carried out for a garden because after all it is a reflection of the heart body mind and soul of the person who plans it You want to create a thing of beauty and a joy forever *Beautiful Rock Gardens and Alpine Plants* John Warwick, 1983 *Rock Gardens and Alpine Plants* E. Typically plants found in rock gardens are small and do not grow larger than 1 meter in height though small trees and shrubs up to 6 meters may be used to create a shaded area for a woodland rock garden If used they are often grown in troughs or low to the ground to avoid obscuring the eponymous rocks The plants found in rock gardens are usually species that flourish in well drained poorly irrigated soil Some rock gardens are designed and built to look like natural outcrops of bedrock Stones are aligned to suggest a bedding plane and plants are often used to conceal the joints between said stones This type of rockery was popular in Victorian times and usually created by professional landscape architects The same approach is sometimes used in commercial or modern campus landscaping but can also be applied in smaller private gardens The Japanese rock garden often referred to as a Zen garden is a special kind of rock garden with water features moss pruned trees and bushes and very few plants Rock gardens have become increasingly popular as landscape features in tropical countries such as Thailand The combination of wet weather and heavy shade trees along with the use of heavy plastic liners to stop unwanted plant growth has made this type of arrangement ideal for both residential and commercial gardens due to its easier maintenance and drainage
