Rocket And The Reich Peenemunde And The Coming Of The Ballistic Missile Era:

The Rocket and the Reich Michael J. Neufeld, 1995 The story behind one of the greatest engineering feats of World War II The Rocket and the Reich is the paradoxical tale of the creation of a technology that would prove so valuable to Allied powers after the war but ultimately proved a failure to the Germans during it Two 8 page photo inserts 6 maps and diagrams

Britain and Ballistic Missile Defence, 1942-2002 Jeremy Stocker, 2004-08-02 Defence against ballistic missiles has been a subject of UK political policy and technical investigation since World War II this book analyses that long history **The**

Peenemünde Wind Tunnels Peter P. Wegener, 1996-01-01 In 1943 on orders from the German Air Ministry young physicist Peter P. Wegener left the Russian front and reported to the Baltic village of Peenemünde His assignment was to work at the supersonic wind tunnels of the rocket laboratories of the German Army Here Wernher von Braun led a team that developed the V 2 the world's first large rocket powered guided missile and laid much of the groundwork for postwar rocket development In this fascinating book Wegener recounts his experiences during Hitler's time World War II and his years at Peenemünde He tells how he was working one night in August 1943 when the Allies bombed the laboratories but left the wind tunnels undamaged The tunnels were moved to Bavaria and Wegener was ordered to follow in 1944 After the war the tunnels were moved again this time to the United States accompanied by the author and other German scientists Shortly before the end of the war Wegener visited Germany's underground V 2 production plant to retrieve archival material on aerodynamics that had been stored in caves for safekeeping He describes the appalling history of the concentration camps where SS guards watched over inmates who toiled underground in inhuman conditions and often did not survive A photoessay enhances this remarkable memoir **Encyclopedia of World War II** Alan Axelrod, 2007 A reference to the ideological military political

biographical and social topics surrounding World War II which is often considered the pivotal event of the twentieth century

Carrier Tom Clancy, 1999-02-01 They are floating cities with crews of thousands They are the linchpins of any military strategy for they provide what has become the key to every battle fought since World War I air superiority The mere presence of a U S naval carrier in a region is an automatic display of strength that sends a message no potential enemy can ignore Now Tom Clancy welcomes you aboard for a detailed look at how these floating behemoths function With his trademark style and eye for detail Clancy brings you naval combat strategy like no one else can Carrier includes Takeoffs and landings flying into the danger zone The aircraft onboard their range their power their weaponry The role of the carrier in modern naval warfare Exclusive photographs illustrations and diagrams Plus An interview with the U S Navy's Chief of Naval Operations Admiral Jay Johnson Organizations and Strategies in Astronomy 7 Andre HECK, 2007-09-18 Astronomy is the most ancient science humans have practiced on Earth It is a science of extremes and of large numbers extremes of time from the big bang to infinity of distances of temperatures of density and masses of magnetic field etc It is a science which is highly visible not only because stars and planets are accessible in the sky to the multitude but also cause the telescopes themselves are

easily distinguishable usually on top of scenic mountains and also because their cost usually represent a substantial proportion of the national budget and of the taxpayers contribution to that budget As such astronomy cannot pass unnoticed It touches on the origins of matter of the Universe where we live on life and on our destiny It touches on philosophy as well as on religion Astronomy is the direct contact of humankind with its origins and the immensity of universal nature It is indeed a science of observation where experimentation is practically possible and which is ruled by mathematics physics chemistry statistical analysis and modelling while offering the largest number of verifications of the most advanced theories of fundamental physics such as general relativity and gravitation At the beginning of the 21 century astronomy is clearly a multidisciplinary activity touching on all aspects of science It is therefore logical that in the past and still now astronomy has attracted the most famous scientists be they pure observers mathematicians physicists biologists experimentalists and even politicians

History of the Space Shuttle, Volume Two T. A. Heppenheimer, 2014-09-30 Basing his work on virtually untapped NASA archives T A Heppenheimer has produced the second volume of his definitive history of the space shuttle Volume Two traces the development of the shuttle through a decade of engineering setbacks and breakthroughs program management challenges and political strategizing culminating in the first launch in April 1981 The focus is on the engineering challenges propulsion thermal protection electronics onboard systems and the author covers in depth the alternative vehicles developed by the U S Air Force and European countries The first launch entailed a monumental amount of planning and preparation that Heppenheimer explains in detail *Rockets and People* Boris Evseevich Chertok, 2005 V 1 no special title v 2 Creating a rocket industry v 3 Hot days of the Cold War v 4 The moon race Space Warfare and Defense Bert Chapman, 2008-03-19 This timely resource provides a history of the development of space weapons and warfare strategies and a comprehensive reference guide to the growing literature on the subject Space Warfare and Defense A Historical Encyclopedia and Research Guide provides comprehensive coverage of the development of space as a possible arena for warfare exploring the military uses of space past present and future and specific details of actual space weapons systems The encyclopedia spans the breadth of U S military space policy comparable programs in the Soviet Union China and the European Union and the full array of international agreements designed to regulate the military uses of space In addition the encyclopedia includes an extensive reference guide nearly 40 percent of the book directing readers to the essential literature on space weapons and defense systems produced by the United States other governments research institutions and additional sources At a time when space is becoming an increasingly important place of military competition and potential conflict Space Warfare and Defense dispels the myths and examines the realities of what may become humanity's ultimate battlefield *Endless Frontier* G. Pascal Zachary, 2018-01-30 A prodigiously researched biography of Vannevar Bush one of America's most awe inspiring polymaths and the secret force behind the biggest technological breakthroughs of the twentieth century As the inventor and public entrepreneur who launched the Manhattan Project helped to create the military industrial complex

conceived a permanent system of government support for science and engineering and anticipated both the personal computer and the Internet Vannevar Bush is the twentieth century's Ben Franklin In this engaging look at one of America's most awe-inspiring polymaths writer G Pascal Zachary brings to life an American original a man of his time ours and beyond Zachary details how Bush cofounded Raytheon and helped build one of the most powerful early computers in the world at MIT During World War II he served as Roosevelt's adviser and chief contact on all matters of military technology including the atomic bomb He launched the Manhattan Project and oversaw a collection of 6 000 civilian scientists who designed scores of new weapons After the war his attention turned to the future He wrote essays that anticipated the rise of the Internet and boldly equated national security with research strength outlining a system of permanent federal funding for university research that endures to this day However Bush's hopeful vision of science and technology was leavened by an understanding of the darker possibilities While cheering after witnessing the Trinity atomic test he warned against the perils of a nuclear arms race He led a secret appeal to convince President Truman not to test the Hydrogen Bomb and campaigned against the Red Scare Elegantly and expertly relayed by Zachary Vannevar's story is a grand tour of the digital leviathan we know as the modern American life

An Untaken Road Steven A Pomeroy, 2016-01-15 Steven A Pomeroy has authored the first history of the American mobile intercontinental ballistic missile ICBM a technology the United States spent four decades and billions of dollars creating but never deployed *An Untaken Road* showcases how the evolution of a technology that ultimately never existed and the politics that surrounded it end up significantly shaping American nuclear strategy and forces for decades Utilizing recently declassified documents years of experience and an unrivaled passion for the history of military technologies Pomeroy has created a new framework on the nature of strategic weapons technology innovation This thorough study of a road not taken is a must read for those seeking to understand the challenges and constraints on U S military weapon programs especially when inter organization competition domestic politics strategic needs and new technologies collide

How the War Was Won Phillips Payson O'Brien, 2015-02-12 An important new history of air and sea power in World War II and its decisive role in Allied victory

Doing the Impossible Arthur L. Slotkin, 2012-07-26 Apollo was known for its engineering triumphs but its success also came from a disciplined management style This excellent account of one of the most important personalities in early American human spaceflight history describes for the first time how George E Mueller the system manager of the human spaceflight program of the 1960s applied the SPO methodology and other special considerations such as all up testing resulting in the success of the Apollo Program Wernher von Braun and others did not readily accept such testing or Mueller's approach to system management but later acknowledged that without them NASA would not have landed astronauts on the Moon by 1969 While Apollo remained Mueller's priority from his earliest days at the agency he promoted a robust post Apollo Program which resulted in Skylab the Space Shuttle and the International Space Station As a result of these efforts Mueller

earned the sobriquet the father of the space shuttle Following his success at NASA Mueller returned to industry Although he did not play a leading role in human spaceflight again in 2011 the National Air and Space Museum awarded him their lifetime achievement trophy for his contributions Following the contributions of George E Mueller in this unique book Arthur L Slotkin answers such questions as exactly how did the methods developed for use in the Air Force ballistic missile programs get modified and used in the Apollo Program How did George E Mueller with the help of others manage the Apollo Program How did NASA centers coming from federal agencies with cultures of their own adapt to the new structured approach imposed from Washington George E Mueller is the ideal central character for this book He was instrumental in the creation of Apollo extension systems leading to Apollo the Shuttle and today s ISS and thus was a pivotal figure in early American human spaceflight history

The Politics of Space Security James Clay Moltz, 2023-05-25 Updated third edition An excellent work This history may be the best space summary currently in publication Journal of Military and Strategic Studies For more than sixty years countries have conducted military and civilian activities in space often for competitive purposes But they have not yet fought in this environment This book examines the international politics of the space age from 1957 to the present the reasons why strategic restraint emerged among the major military powers and how recent trends toward weaponization may challenge prior norms of conflict avoidance James Clay Moltz analyzes the competing demands of national interests in space against the shared interests of all spacefarers in preserving the safe use of space in the face of emerging threats such as man made orbital debris This new edition offers analysis of the 2011 to 2018 period including the second term of President Obama and the beginning of the Trump administration Focusing on great power competition and cooperation as well as questions related to the sustainability of current and future national space policies The Politics of Space Security is an authoritative history of the space age Praise for previous editions Most of this well written study is blessedly free from jargon a particularly valuable contribution to the space security debate given both the wide range of the historical dimensions and the incisive quality of its analysis Issues in Science and Technology An impressive and timely contribution to security studies it is difficult to find fault with this thoughtful and comprehensive volume Review of Policy Research

The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991 J. D. Hunley, 2013-03-15 In this definitive study J D Hunley traces the program s development from Goddard s early rockets and the German V 2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science Unique in its single volume coverage of the

evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and innovation as well as those specializing in the history of space flight

The Map in the Machine Luis F. Alvarez Leon, 2024-04-30 Digital technologies have changed how we shop work play and communicate reshaping our societies and economies To understand digital capitalism we need to grasp how advances in geospatial technologies underpin the construction operation and refinement of markets for digital goods and services In *The Map in the Machine* Luis F Alvarez Leon examines these advances from MapQuest and Google Maps to the rise of IP geolocation ridesharing and a new Earth Observation satellite ecosystem He develops a geographical theory of digital capitalism centered on the processes of location valuation and marketization to provide a new vantage point from which to better understand and intervene in the dominant techno economic paradigm of our time By centering the spatiality of digital capitalism Alvarez Leon shows how this system is the product not of seemingly intangible information clouds but rather of a vast array of technologies practices and infrastructures deeply rooted in place mediated by geography and open to contestation and change

The Complete Book of Spacecraft Michael H. Gorn, Davide Sivoletta, 2025-08-26 Marvel at the history of space exploration through its daring vehicles exhaustively chronicled in this authoritative volume featuring more than 250 artworks In 1957 the world looked on with both uncertainty and amazement as the Soviet Union launched Sputnik 1 the first man made orbiter Sputnik 1 would spend three months circling Earth every 98 minutes and cover 71 million miles in the process The world's space programs have traveled far literally and figuratively since then and the spacecraft they have developed and deployed represent almost unthinkable advances for such a relatively short period In *Spacecraft* illustrator and aerospace professional Giuseppe De Chiara teams up with aerospace historian Michael Gorn to present a huge profusely illustrated aerospace history profiling and depicting spacecraft from Sputnik 1 through the International Space Station and everything in between including concepts that have yet to actually venture outside the Earth's atmosphere This updated and revised edition includes Expertly written profiles depicting and describing the design development and deployment of manned and unmanned spacecraft from around the world including satellites capsules spaceplanes rockets and space stations now updated with the latest models Vivid scale illustrations of the many international spacecraft in multiple view sometimes cross section and in many cases shown in archival period photography to provide further historical context Earthbound and spaceborne data and intel chronicling every technological leap engineering challenge and monumental achievement from troubleshooting the lunar landers of the 60s to engineering solar driven sails to propel futuristic craft to Mars and beyond A look ahead to an era of privatized space travel and even plans for lunar and Martian space stations and settlement Dividing the book by era De Chiara and Gorn feature spacecraft not only from the United States and Soviet Union Russia but also from the European Space Agency and China The mind blowing machines examined in this volume include the rockets Energia Falcon 9 and VEGA the Hubble Space Telescope the Cassini space probe and the Mars rovers Opportunity

and Curiosity For anyone who has marveled at humankind's attempts and advances in leaving Earth Spacecraft The Complete Guide to the Rockets Satellites Capsules Shuttles and Stations That Put Us in Space is the definitive reference

The CASSIA Spy Ring in World War II Austria C. Turner, 2017-11-29 After Hitler annexed Austria in 1938 the Gestapo began silencing critics Many were shipped to concentration camps those deemed most dangerous to the Reich were executed Yet a few slipped through the Gestapo's net and organized resistance cells One group codenamed CASSIA became America's most effective spy ring in Austria during World War II This first full length account of CASSIA describes its contributions to the Allied war effort including reports on the V 2 missile Nazi death camps and advanced combat aircraft and tanks before a catastrophic intelligence failure sent key members to the guillotine firing squad or gas chamber The Politics of Space Security James Moltz, 2011-06-29 The past five decades have witnessed often fierce international rivalry in space but also surprising military restraint Now with an increasing number of countries capable of harming U S space assets experts and officials have renewed a long standing debate over the best route to space security Some argue that space defenses will be needed to protect critical military and civilian satellites Others argue that space should be a sanctuary from deployed weapons and military conflict particularly given the worsening threat posed by orbital space debris Moltz puts this debate into historical context by explaining the main trends in military space developments since Sputnik their underlying causes and the factors that are likely to influence their future course This new edition provides analysis of the Obama administration's space policy and the rise of new actors including China India and Iran His conclusion offers a unique perspective on the mutual risks militaries face in space and the need for all countries to commit to interdependent environmentally focused space security
