Benson,William B. Faherty,2020-10-15 The one thing for which this century will be remembered 500 years from now was This was the century when we began the exploration of space Arthur M Schlesinger Tributes to Moonport A History of Apollo Launch Facilities and Operations A thorough account of the complex scientific engineering and managerial efforts that undergirded the astounding events that the National Aeronautics and Space Administration carried out Journal of American History Another simply superb NASA official history Construction administration and technology are carefully

interwoven in an unusually candid and frank treatment of the history of America's first lunar launching facility Aerospace Historian Moon Launch re-creates the exciting story of the astronauts and engineers, scientists and technicians, politicians and public citizens who expanded the world's understanding of humanity's potential, the people responsible for the Project Apollo flights to the moon. Through their teamwork at the Kennedy Space Center, Cape Canaveral became the spaceport for the nation and in the mind of many, the gateway to the universe. A companion to *Gateway to the Moon* and also part of the 1978 NASA History Series *Moonport* volume, this illustrated book describes the seven missions to the moon launched between 1969 and 1972. With the exception of the abortive Apollo 13 flight, all landed successfully. As the story progresses, astronauts explore the moon's surface in the lunar rover, complete with bucket seats and power steering, set up experiments and bring back hundreds of pounds of lunar geological samples. The book concludes with a description of the last and most spectacular liftoff: Apollo 17, launched on a dark December night before a crowd of nearly 500,000 visitors. Charles D. Benson, a retired colonel of the U.S. Army, is the coauthor of the official history of the Skylab orbital workshop. William B. Faherty, director of the Museum of the Western Jesuit Missions in Hazelwood, Missouri, retired professor of history at St. Louis University, and archivist emeritus of the Midwest Jesuit Archives, is the author of 25 books, including the historical novel *The Call of Pope Octavian*.

Manned and Unmanned Flights to the Moon Terry C. Treadwell, 2024-10-30 This book is about how the dreams of exploring other worlds became a reality with the Mercury, Gemini, and Apollo programs. The problems encountered in the development of the spacecraft, including the disastrous fire aboard Apollo 1, which resulted in the deaths of the three American astronauts Gus Grissom, Ed White, and Roger Chaffee, are covered. When Neil Armstrong stepped out onto the surface of the Moon on 20 July 1969, many people thought that this was the first time man had visited its nearest neighbor. Although this was the first manned landing, there had been forty-one missions prior to this by both the Americans and the Russians. This book is about all those missions and the sixty-five missions that followed. Also included, although in much lesser detail, is the part the Russians played in the formative years of the space race and the problems they encountered, culminating in the successful Apollo-Soyuz program, which proved that the two super powers could work together. The laboratory in the sky, Skylab, the forerunner of the ISS station, is also covered. The book contains over 200 photographs, all of which are either credited to NASA or from the author's own collection. The sources include correspondence and the author's personal conversations with some of the astronauts involved in the early part of the space program.
