

SYMPTOMS OF ROCKY MOUNTAIN SPOTTED FEVER

Symptoms of Rocky Mountain Spotted Fever

When an infected tick feeds on a human host, the *R. rickettsii* bacteria infect the cells that line blood vessels in the body. The blood vessels become more permeable and lose their ability to act as a barrier within the body. This in turn is what causes the symptoms, which can be very dangerous if not treated quickly.

Symptoms of RMSF begin to appear within a few days of a tick bite. Sometimes, however, it could take up to 14 days. At first, symptoms may seem nonspecific and include:

- Fever of 103-105 degrees F
- Chills
- Headache
- Loss of appetite
- Abdominal pain
- Vomiting
- Muscle pain
- Light sensitivity
- Hallucinations

Approximately 2-4 days later, a rash usually develops on the skin. It produces small red or pink dots that start on the wrists and ankles and then spreads over the body. Some rashes appear as larger blotches. About 10 percent of people with RMSF never develop a rash, however.
