The Routledge Handbook of Pink Floyd Chris Hart, Simon A. Morrison, 2022-09-20 The Routledge Handbook of Pink Floyd is intended for scholars and researchers of popular music as well as music industry professionals and fans of the band. It brings together international researchers to assess, evaluate and reformulate approaches to the critical study and interpretation of one of the world's most important and successful bands. For the first time this Handbook will tear down the wall examining the band's collective artistic creations and the influence of social, technological, commercial and political environments over several decades on their work. Divided into five parts, the book provides a thoroughly contextualised overview of the musical works of Pink Floyd, including coverage of performance and sound media reception and fandom. Genre periods of Pink Floyd's work and aesthetics and subjectivity. Drawing on art, design, performance, culture and counterculture, emergent theoretical resources and analytical frames are evaluated and discussed from across the social sciences, humanities and creative arts. The Handbook is intended for scholars and researchers of popular music as well as music industry professionals. It will appeal across a range of related subjects from music production to cultural studies and media communication studies.

Beyond Digital Representation Andrea Giordano, Michele Russo, Roberta Spallone, 2023-09-01 This book collects contributions which showcase the impact of new augmented reality (AR) and artificial intelligence (AI) technologies considered jointly in the fields of cultural heritage and innovative design. AR is an alternative path of analysis and communication if applied to several fields of research, in particular if related to space and artifacts in it. This happens because the neural network development strengthens the relationship between augmented reality and artificial intelligence, creating processes close to human thought in shorter times. In the last years, the AR/AI expansion and the future scenarios have raised a deep transdisciplinary speculation. The disciplines of representation, drawing, surveying, visual communication as a convergence place of multidisciplinary theoretical and applicative studies related to architecture, city environment, tangible and intangible cultural heritage are called to contribute to the international debate. The book chapters deal with augmented reality and artificial intelligence, analyzing their connections as research tools for knowing the environment. In particular, the topics focus on the intersection between real and virtual world and on the heuristic role of drawing in the enhancement and management of cultural heritage in planning and monitoring the architecture, the environment or the infrastructures. Scientists involved in AR and AI research, applied separately or together in the field of cultural heritage, architectural design, urban planning and infrastructures analysis, as well as members of public and private organizations, make up interdisciplinary groups that fuel the discussion focusing on the priorities and aims of the research related to the disciplines of representation.
