Role Of Biotechnology In Countering Btw Agents:

The Role of Biotechnology in Countering BTW Agents Alexander Kelle, Malcolm R. Dando, Kathryn Nixdorff, 2012-12-06 Biotechnology is vital to counter biological and toxin weapons Without biotechnology the detection identification and diagnoses of and medical countermeasures to such weapons would be virtually impossible As biological and toxin agents occur in natural outbreaks of disease or intoxications there are both civil and military benefit to be had from the use of biotechnology in providing effective countermeasures to such agents The role of biotechnology in countering biological and toxin weapons is here addressed under seven major headings The wider political and economic contexts Enabling technologies for BTW agent detection The applicability of biotechnological methods for BTW agent detection on the battlefield in a terrorist incident and in an inspection environment Pre exposure medical countermeasures Diagnosis and identification Post exposure treatment and decontamination Contribution of biotechnology to strengthening international conventions against BTW agents

Living Weapons Gregory D. Koblenz, 2011-05-16 Biological weapons are widely feared yet rarely used Biological weapons were the first weapon prohibited by an international treaty yet the proliferation of these weapons increased after they were banned in 1972 Biological weapons are frequently called the poor man's atomic bomb yet they cannot provide the

same deterrent capability as nuclear weapons One of my goals in this book is to explain the underlying principles of these apparent paradoxes from Living Weapons Biological weapons are the least well understood of the so called weapons of mass destruction Unlike nuclear and chemical weapons biological weapons are composed of or derived from living organisms In Living Weapons Gregory D Koblentz provides a comprehensive analysis of the unique challenges that biological weapons pose for international security At a time when the United States enjoys overwhelming conventional military superiority biological weapons have emerged as an attractive means for less powerful states and terrorist groups to wage asymmetric warfare Koblentz also warns that advances in the life sciences have the potential to heighten the lethality and variety of biological weapons The considerable overlap between the equipment materials and knowledge required to develop biological weapons conduct civilian biomedical research and develop biological defenses creates a multiuse dilemma that limits the effectiveness of verification hinders civilian oversight and complicates threat assessments Living Weapons draws on the American Soviet Russian South African and Iraqi biological weapons programs to enhance our understanding of the special challenges posed by these weapons for arms control deterrence civilian military relations and intelligence Koblentz also examines the aspirations of terrorist groups to develop these weapons and the obstacles they have faced Biological weapons Koblentz argues will continue to threaten international security until defenses against such weapons are improved governments can reliably detect biological weapon activities the proliferation of materials and expertise is limited and international norms against the possession and use of biological weapons are strengthened

Decontamination of Warfare Agents Andre Richardt, Marc-Michael Blum, 2008-06-25 Based on results previously restricted for military use and inaccessible to the public this practice oriented handbook introduces the use of enzymes for fast and efficient decontamination of B C weapons in various scenarios including terrorist attacks It draws on the internationally recognized technological leadership of the German armed forces whose anti B C technology is among the most advanced worldwide The text is rounded off with a look at future perspectives

Governance of Biotechnology in Post-Soviet Russia Tatyana Novossioloova, 2017-07-19 This book provides an up to date analysis of the governance of biotechnology in post Soviet Russia The rapid advancement of the life sciences over the past few decades promises to bring tremendous benefits but also raises significant social ethical legal and security risks Nations adaptability to the twin challenges of attempting to secure the benefits while reducing the risks and threats is a large and still burgeoning governance challenge Here Novossioloova cuts across several sets of literature bringing together elements of the anthropological study of culture history of science and technology management and international governance and Soviet history and politics Due to its multidisciplinary approach in depth analysis accessible style and extensive reference list this text offers invaluable insights into the normative dimensions of the governance of biotechnology unpacking both the formal and intangible attributes and artefacts of biotechnology policy and practice in Russia

The Soviet Biological Weapons Program Milton Leitenberg, Raymond A. Zilinskas, 2012-07-25

This is the first attempt to understand the broad scope of the USSR's offensive biological weapons research from its inception in the 1920s. Gorbachev tried to end the program but the US and UK never obtained clear evidence he succeeded raising the question whether the means for waging biological warfare could be revived in Russia in the future. *Radiation Inactivation of Bioterrorism Agents* L.G. Gázsó, C.C. Ponta, 2005-02-25 The use of and problems associated with biological weapons have been of concern to NATO and non NATO military organizations for many years. Until recently most of the readily available literature addressed the military issues associated with the possible use of biological weapons on the battlefield the medical effects of the various agents and what was known about medical prophylaxis and treatments. Information on other needed countermeasures such as decontamination or public health issues associated with exposure of civilian populations were largely overlooked. This perspective changed dramatically after the contamination of the US Mail system with powdered anthrax spores. Among the significant problems and defensive weaknesses that the anthrax attack revealed was the importance but lack of established industrial scale decontamination methods for large volumes of heterogeneous objects or for complex physical environments. Ultimately these two microbial decontamination problems were solved in very different ways. The contaminated mail was treated with ionizing radiation while the contaminated government buildings were treated with vapor gas phase chemicals. Both the decontamination of the mail and establishing a process for prophylactic treatment of the mail were solved relatively quickly. This was in large part due to the robust radiation biology and technical base derived from the industrial use of ionizing radiation. Contributing to the speed of response was the fact that the attack occurred within the United States and in the home town of many of the technical experts and decision makers allowing official response to be coordinated rapidly.

Current Publications in Legal and Related Fields, 2002 **Scientific and Technical Means of Distinguishing Between Natural and Other Outbreaks of Disease** Malcolm R. Dando, G.S. Pearson, Bohumir Kriz, 2012-12-06 There is increasing concern over the possible use of biological weapons. If they are used an attack will manifest as a disease outbreak among humans, animals or plants. It is thus important to be able to distinguish between natural disease outbreaks and the result of such an attack. The book discusses the scientific and technical means available to investigate this question and then goes on to consider the agents of concern. The book concludes with a look forward to future developments.

Russian Views on Countering Terrorism During Eight Years of Dialogue Russian Academy of Sciences, National Research Council, Policy and Global Affairs, Development, Security, and Cooperation, Office for Central Europe and Eurasia, 2009-05-28 Few countries have endured as many attacks of terrorism during the past two decades as has Russia. From bombings on the streets of a number of cities to the disruption of pipelines in Dagestan to the taking of hundreds of hostages at a cultural center in Moscow and at a school in Beslan the Russian government has responded to many political and technical challenges to protect the population. The measures that have been undertaken to reduce vulnerabilities to terrorist attacks and to mitigate the consequences of attacks have been of widespread interest in

many other countries as well In June 1999 the Presidents of the National Academy of Sciences and the Russian Academy of Sciences initiated an inter academy program to jointly address common interests in the field of counter terrorism Four workshops were held from 2001 to 2007 and additional consultations were undertaken prior to and after the series of workshops This report includes 35 of the Russian presentations during the workshop series Collectively they provide a broad overview of activities that have been supported by Russian institutions The Finnish Yearbook of International Law 1998 Kari Takamaa, Martti Koskeniemi, 2000-08-01 Despite its Finnish initiative and pedigrees The Finnish Yearbook of International Law does not restrict itself to purely Finnish topics On the contrary it reflects the many connections in law between the national and the international The Finnish Yearbook of International Law annually publishes articles of high quality dealing with all aspects of international law including international law aspects of European law with close attention to developments that affect Finland Its offerings include longer articles of a theoretical nature exploring new avenues and approaches shorter polemics commentaries on current international law developments book reviews and documentation of relevance to Finland s foreign relations not easily available elsewhere The Finnish Yearbook offers a fertile ground for the expression of and reflection on the connections between Finnish law and international law as a whole and insight into the richness of this interaction **Radiation Inactivation of Bioterrorism Agents** L. G. Gazso, Corneliu C.
