Role Of Fire In Northern Circumpolar Ecosystems:

The Role of Fire in Northern Circumpolar Ecosystems International Council of Scientific Unions. Scientific Committee on Problems of the Environment, 1983 Based on the conference Fire in northern circumpolar ecosystems held at the University of New Brunswick in 1979 Examines the role of fire in the functioning of northern ecosystems *Wildland Fire in Ecosystems*, 2000 *Fire in North American Wetland Ecosystems and Fire-wildlife Relations* Ronald E. Kirby, Stephen J. Lewis, Terry N. Sexson, 1988 *Ecology of Wildfire Residuals in Boreal Forests* Ajith Perera, Lisa Buse, 2014-09-15 Large and intense wildfires are integral to the globally important boreal forest biome While much is known about boreal wildfires the focus on forest remnants that either escape or survive these intense fires is a recent phenomenon academics now study ecological processes of wildfire residuals forest policymakers use their patterns to design harvest strategies forest managers consider their economic value and conservationists recognize their intrinsic ecological importance *Ecology of Wildfire Residuals in Boreal Forests* is the first book to explore ecological patterns and processes of what does not burn within boreal wildfires Following a brief introduction to the boreal forest biome it discusses the processes that form wildfire residuals how they are studied with various approaches and methods the types extent and ecological functions of wildfire residuals and their role in forest management applications all in the context of ecological scale This book is a reference for researchers and graduate students studying boreal forest ecology as well as for policymakers and forest managers It adopts a non reductionist perspective that will be of interest to scientists from conservation science forest ecology forest management and timber production Brings together fire behaviour ecological scale vegetation ecology and conservation biology to provide a cross disciplinary multi scale and an integrative discussion of forest fire residuals Captures the state of knowledge with a meta analysis of research trends during the past few decades with a comprehensive review of the literature a compilation of key references and a list of key topics relevant to the study of boreal wildfire residuals Identifies the major gaps and uncertainties in the present body of knowledge including a critique of study techniques and reporting practices to date and proposes a set of terms and definitions and a list of research questions and priorities Includes the authors observations and research experience from boreal Canada and information extracted from interactions with North American and European ecologists forest managers and conservationists **Biology of Dwarf Mistletoes** Frank G. Hawksworth, Robert F. Scharpf, 1984 *Landscape Function and Disturbance in Arctic Tundra* James F. Reynolds, John D. Tenhunen, 2013-04-17 Following the discovery of large petroleum reserves in northern Alaska the US Department of Energy implemented an integrated field and modeling study to help define potential impacts of energy related disturbances on tundra ecosystems This volume presents major findings from this study A broad range of basic and applied research topics are examined ranging from ecosystem physiology and biogeochemistry to landscape models that quantify the impact of road building on tundra hydrology and ecosystem structure It is an important resource for researchers and students interested in

arctic ecology as well as for environmental managers concerned with practical issues of disturbances General Technical Report SE ,1991 **Ecosystem Dynamics of the Boreal Forest : The Kluane Project** Vancouver Charles J. Krebs Professor of Zoology University of British Columbia,Edmonton Stan Boutin Professor of Zoology University of Alberta,Rudy Boonstra Professor of Physiology and Zoology University of Toronto,2001-03-31 The boreal forest is one of the world s great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world s closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada s leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9 10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest Ecosystem Dynamics of the Boreal Forest The Kluane Project summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and populations The study of the Kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there **Arctic Ecosystems in a Changing Climate** F. Stuart Chapin III,Robert L. Jefferies,James F. Reynolds,Gaius R. Shaver,Josef Svoboda,Ellen W. Chu,2012-12-02 The arctic region is predicted to experience the earliest and most pronounced global warming response to human induced climatic change This book synthesizes information on the physiological ecology of arctic plants discusses how physiological processes influence ecosystem processes and explores how climate warming will affect arctic plants plant communities and ecosystem processes Reviews the physiological ecology of arctic plants Explores biotic controls over community and ecosystems processes Provides physiological bases for predicting how the Arctic will respond to global climate change **Federal Wildland Fire Management** United States. Department of the Interior,1995 **Federal Wildland Fire Management** DIANE Publishing Company,1997-08 Managing wildland fire in the U S is a challenge increasing in complexity the use of wildland fire preparedness wildland urban interface protection coordinated program management Also presented are the guiding principle that are fundamental to wildland fire management recommendations for fire management policies Photos graphs references Research Paper PNW. ,1978 *Wildlife Review* ,1986 **General Technical Report RMRS** ,1998 *The Ecology of Fire* Robert J. Whelan,1995-08-10 Wildfires kill many animals but are populations of animals affected How do animals survive the passage of fire Why do some

tree species survive and others die in a fire Do frequent fires cause changes in plant community composition Answering questions such as these requires an understanding of the ecological effects of fire Aimed at senior undergraduate students researchers foresters and other land managers Dr Whelan s book examines the changes wrought by fires with reference to general ecological theory The impacts of fires on individual organisms populations and communities are examined separately and emphasis is placed on the importance of fire regime Each chapter includes a listing of outstanding questions that identify gaps in current knowledge The book finishes by summarising the major aspects of ecology that are of particular relevance to management of fires both protection against wildfires and deliberate use of fire

Natural Resources Management and Biological Sciences Edward R Rhodes, Humood Naser, 2021-02-17 The natural resources of the Earth are indispensable for the survival of humans plants and animals and for the state of biodiversity The way they are managed determines the extent to which they will be preserved for future generations Climate change underscores the need for the proper use of natural resources This book brings together reviews of literature and the results of research studies on the status and management of soil water plant and wildlife resources especially as they relate to the biological sciences in Africa Asia Europe North America and Latin America It covers work on classification and inventories impacts of anthropogenic activities and exploitation and conservation The book will be of interest to scientists and practitioners of natural resource management worldwide

Chemical Ecology of Plants: Allelopathy in Aquatic and Terrestrial Ecosystems Inderjit, Azim U. Mallik, 2012-12-06 Allelochemicals play a great role in managed and natural ecosystems Apart from plant growth allelochemicals also may influence nutrient dynamics mycorrhizae soil chemical characteristics and microbial ecology Synergistic action of various factors may better explain plant growth and distribution in natural systems The book emphasizes the role of allelochemicals in shaping the structure of plant communities in a broader ecological perspective The book addresses the following questions 1 How do allelochemicals influence different components of the ecosystem in terms of shaping community structure 2 Why is it difficult to demonstrate interference by allelochemicals i e allelopathy in a natural system in its entirety Despite a large amount of existing literature on allelopathy why are ecologists still skeptical about the existence of allelopathy in nature 3 Why are there only scarce data on aquatic ecosystems 4 What role do allelochemicals play in microbial ecology

Oversight Hearings on National Environmental Policy Act United States. Congress. House. Committee on Resources. Subcommittee on Forests and Forest Health, 1998 Ecological Integrity David Pimentel, Laura Westra, Reed F. Noss, 2013-04-22 Global Integrity Project has brought together leading scientists and thinkers from around the world to examine the combined problems of threatened and unequal human well being degradation of the ecosphere and unsustainable economies Based on the proposition that healthy functioning ecosystems are a necessary prerequisite for both economic security and social justice the project is built around the concept of ecological integrity and its practical implications for policy and management Ecological Integrity presents a synthesis and findings of the project

Contributors including Robert Goodland James Karr Orie Loucks Jack Manno William Rees Mark Sagoff Robert Ulanowicz Philippe Crabbe Laura Westra David Pimentel Reed Noss and others examine the key elements of ecological integrity and consider what happens when integrity is lost or compromised The book examines historical and philosophical foundations of the concept of ecological integrity explores how integrity can be measured examines the relationships among ecological integrity human health and food production looks at economic and ethical issues that need to be considered in protecting ecological integrity offers concrete recommendations for reversing ecological degradation while promoting social and economic justice and welfare Contributors argue that there is an urgent need for rapid and fundamental change in the ecologically destructive patterns of collective human behavior if society is to survive and thrive in coming decades Ecological Integrity is a groundbreaking book that integrates environmental science economics law and ethics in problem analysis synthesis and solution and is a vital contribution for anyone concerned with interactions between human and planetary health
