Mangroves: Structure, Functions, Ecology and Biodiversity Dr. Hiren B. Soni, Dr. Kavita Thakur, Marine ecosystems are diverse habitats endowed with physical chemical and geographical variations in the ecosystems where the gradation from highly productive organisms to highly specialized organisms exists India has almost 7 517 km long coast of which 5 423 km belongs to the peninsular India and around 2 094 km to the Andaman Nicobar and Lakshadweep Islands The mainland coast of India consists of 43% sandy beaches 11% rocky coast including cliffs and 46% mudflats or marshy coast This massive coastline of India supports the human population tremendously through marine resources Nearly 250 million people live within the fringe of 50 km from the coastline of India Hence a vital role in India s economic growth is played by the ecological services that the marine and coastal ecosystems provide The MPAN Marine Protected Area Network in India regulates the natural marine resources to conserve the depleting biodiversity for the betterment of people that are dependent on these coastal resources Moreover Gujarat State is bestowed with one of the longest coastline of India 1 650 km The Gulf of Kachchh Gujarat is India s first Marine National Park MNP contributing to the ecological importance of the state s coastal ecosystem exhibiting the most vulnerable biological diversity in intertidal mudflats gulfs bays wetlands mangroves salt marshes coral reefs beaches dunes and estuaries The book Mangroves Structure Functions Ecology and Biodiversity focuses on environmental and ecological studies of Gulf of Kachchh Western Gujarat India in relation to eutrophication biotic components structure and functions of mangroves and biomonitoring of metals The book covers an in depth study of surface water and bottom sediment quality diversity density abundance commonness rarity of shells ecological structure and functions of mangrove environment including composition population dynamics community structure of floral and faunal species phytochemical constituents of selected mangrove tree species and biomonitoring of nutrients in *Avicennia marina* The book would unquestionably be the need of an hour for mangroves managers marine conservationists and policy makers or decision authorities to prevent the unrestrained exploitation of marine biodiversity destruction of potential mangrove habitats and uncontrolled interactions of man and technology with mangrove ecosystems around the world

Crop Biofortification Adnan Noor Shah, Sajid Fiaz, Muhammad Aslam, Javed Iqbal, Abdul Qayyum, 2025-06-03 Develop more nutritious crops to aid in the fight against world hunger with this timely volume One in nine people worldwide suffer from hunger or food scarcity Massively increasing food production is one of the most urgent scientific projects in the modern world particularly as a changing climate places increasing pressure on the global food supply and on sustainable food production processes Biofortification is a process in which plant breeding improved agronomic practices and or modern biotechnology are employed to increase nutrient density of crops without sacrificing any of their desirable characteristics It s an essential tool in the global fight against hunger

Crops Biofortification offers an up to the minute overview of this essential subject and its recent advances It covers all the latest methodologies and techniques deployed in biofortification as well as surveying plant responses to genetically induced biofortification and the effect of climate change on biofortified crops Designed to allow for the application of these techniques at the field level it s a significant contribution towards the search for a sustainable global food supply Crops Biofortification readers will also find Presentation of recent advances in omics particularly metabolomics which can decipher potential changes in plants caused by biofortification Detailed discussion of methods for increasing the nutritional content of edible plants to address specific nutritional deficiencies Contributions towards a road map for increasing global food production by 70% before the year 2050 Crops Biofortification is ideal for researchers policymakers and professionals interested in the potential biofortification of crop plants as well as graduate and advanced undergraduate students in agronomy plant physiology plant breeding and genetics agricultural biotechnology and related fields
