**Natural Selection and Beyond** Charles Hyde Smith, George Beccaloni, 2010 Alfred Russel Wallace 1823 1913 was one of the late nineteenth century's most potent intellectual forces. His link to Darwin as co-discoverer of the principle of natural selection alone would have secured him a place in history but he went on to complete work entitling him to recognition as the father of modern biogeographical studies as a pioneer in the field of astrobiology and as an important contributor to subjects as far ranging as glaciology land reform anthropology and ethnography and epidemiology. Beyond this many are coming to regard Wallace as the pre eminent field biologist collector and naturalist of tropical regions. Add to that the fact that he was a vocal supporter of spiritualism socialism and the rights of the ordinary person and it quickly becomes apparent that Wallace was a man of extraordinary breadth of attention. Yet his work in many of these areas is still not well known and still less recognized is his relevance to current day research almost 100 years after his death. This rich collection of writings by more than twenty historians and scientists reviews and reflects on the work that made Wallace a famous man in his own time and a figure of extraordinary influence and continuing interest today.

**The Role of Natural Selection in Human Evolution** Francisco M. Salzano, 1975 *The Evolutionary Mechanism of Human Dysfunctional Behavior* Ivan Fuchs, 2019-04-18 Why is humanity by far the most successful animal in the animal kingdom but when it comes to survival of the fittest we pull against the impulse toward natural selection Unique among vertebrates humans develop and practice varied forms of dysfunctional or maladaptive behavior the graver of which are categorized as mental disorders which doesn't sustain our species Dr Ivan Fuchs explains why this is the case setting his discussion within the fields of psychiatry evolutionary biology and genetics marshalling a wide range research to make a compelling case In this work Dr Ivan Fuchs provides his theory on human dysfunctional behavior rooted in Darwinian evolutionary thinking His theory includes 1 An attempt to identify the basic evolutionary mechanism that leads to dysfunctional or maladaptive behavior that is increasing in human populations He proposes that this mechanism consists of progressive relaxation of selection pressures originating in the natural environment as a result of the technological and cultural development in human civilization These developments protect against many natural inconveniences and dangers such as harmful weather conditions scarce or unreliable food supplies cruel even deadly competition for life sustaining or

reproductive resources danger of predation and so on The relaxation of natural selection pressures leads to excessive diversification of innate predispositions that due to the complexities of social coexistence has both far reaching beneficial as well as harmful consequences 2 Dr Fuchs deals primarily with severe forms of dysfunctional behavior categorized as mental disorders pinpointing those genetically based behavioral complexes which predispose humans to anxiety affective and personality disorders paranoia and schizophrenia 3 Dr Fuchs also makes clear that the above innate predispositions cannot lead by themselves to the whole clinical picture of diagnosable mental disorder categories In order for full blown clinical symptomatology to develop the innate predisposition has to interact with influences after childbirth first of all learning Consequently psychiatric understanding and research has to distinguish sharply between those mental brain structures and functions which constitute the innate predisposition to a certain mental disorder versus those ones involved secondarily during the lifespan This consideration is detailed in the case of schizophrenia spectrum of disorders The above theoretical considerations have important therapeutic preventive and research implications

*Hunter-Gatherers* Robert L. Bettinger, 2013-11-11 Hunter gatherers are the quintessential anthropological topic They constitute the subject matter that in the last instance separates anthropology from its sister social science disciplines psychology sociology economics and political science In that central position hunter gatherers are the acid test to which any reasonably comprehensive anthropological theory must be applied Several such theories some narrow some broad are examined in light of the hunter

gatherer case in this book My purpose then is that of a review of ideas rather than of a literature I do not probably could not survey all that has been written about hunter gatherers Many more works are ignored than considered That is not because the ones ignored are uninteresting but because it is my broader purpose to concentrate on certain theoretical contributions to anthropology in which hunter gatherers figure most prominently The book begins with two chapters that deal with the history of anthropological research and theory in relation to hunter gatherers The point is not to present a comprehensive or even handed accounting of developments Rather I sketch a history of selected ideas that have determined the manner in which social scientists have viewed and thus studied hunter gatherers This lays the groundwork for subjects subsequently addressed and establishes two fundamental points First the social sciences have always portrayed hunter gatherers in ways that serve their theories in short hunter gatherer research has always been a theoretical enterprise Second these theoretical treatments have generally been either evolutionary or materialist or both in perspective
