Scaling Relations In Experimental Ecology R. H. Gardner, W.M. Kemp, Kennedy, S. Victor, J.E. Petersen, 2001

Scaling Relations in Experimental Ecology R. H. Gardner, 2001 This book discusses the impact of recent advances in the theory of scaling relationships and identifies critical issues that must be considered if experimental results are used to understand the temporal and spatial scales of actual ecosystems The complexity of ecosystems complicates experimental design How for example does a scientist draw boundaries when studying species effects and interactions Once these boundaries are drawn how does one treat factors external to that study Will the failure to consider external factors affect one's ability to extrapolate information across temporal and spatial scales This volume provides a compilation from a broad range of ecologists with extensive experimental research experience that addresses these and other questions of scaling relations

Scaling Relations in Experimental Ecology Robert H. Gardner, W. Michael. Kemp, Victor S. Kennedy, John E.

Petersen, 2012-08-14 Ecology *Plant Disease Epidemiology: Facing Challenges of the 21st Century* S. Savary, B.M.

Cooke, 2007-12-13 Plant disease epidemiologists have a strong scientific tradition in studying climate pathogen disease relationships Biodiversity is also of global concern The decline of global biodiversity that is currently taking place has been referred to as the sixth great extinction process our planet has experienced during its history but this time it is man made Generations of plant pathologists and especially of plant disease epidemiologists have been dealing with biodiversity It is from this diversity that presumably the most potent instrument for disease management has been developed by plant pathologists host plant resistance Host plant diversity and the disease resistance genes it harbours can be deployed over time and space according to epidemiological principles Sustainable production and protection systems also need to be devised which could exploit scarcer resources sparingly and if possible enhance the resource base Plant disease epidemiologists alone cannot provide answers to such questions but certainly could significantly contribute to these new strategies This book provides an overview of some of the latest research in plant disease epidemiology from researchers at the cutting edge of this important discipline **Advances in Ecological Research**, 2003-01-07 Advances in Ecological

Research presents a wide range of papers on all aspects of ecology Topics include the physiology populations and communities of plants and animals as well as landscape and ecosystem ecology The evolutionary ecology of carnivorous plants Trophic interactions in population cycles of voles and lemmings Scale effects and extrapolation in ecological experiments **Scaling and Uncertainty Analysis in Ecology** Jianguo Wu, K. Bruce Jones, Harbin Li, Orie L.

Loucks, 2006-07-02 Primarily the book draws together a series of important case studies to provide a comprehensive review and synthesis of the most recent concepts theories and methods in scaling and uncertainty analysis It compares current definitions and ideas concerning scale within a coherent framework and examines two key scaling approaches similarity based scaling which is rooted in the idea of similitude or self similarity and dynamic model based scaling which emphasizes

processes and mechanisms With case studies focusing on issues ranging from population to ecosystem processes from biodiversity to landscape patterns and from basic research to multidisciplinary management and policy making the book will appeal to both researchers and practitioners working on landscape issues It will also provide a valuable resource for graduate students and professional trainees in ecology environmental policy resource management and global change science

Marine Macroecology Jon D. Witman, Kaustuv Roy, 2009-10-15 Pioneered in the late 1980s the concept of macroecology a framework for studying ecological communities with a focus on patterns and processes revolutionized the field Although this approach has been applied mainly to terrestrial ecosystems there is increasing interest in quantifying macroecological patterns in the sea and understanding the processes that generate them Taking stock of the current work in the field and advocating a research agenda for the decades ahead *Marine Macroecology* draws together insights and approaches from a diverse group of scientists to show how marine ecology can benefit from the adoption of macroecological approaches Divided into three parts *Marine Macroecology* first provides an overview of marine diversity patterns and offers case studies of specific habitats and taxonomic groups In the second part contributors focus on process based explanations for marine ecological patterns The third part presents new approaches to understanding processes driving the macroecological patterns in the sea Uniting unique insights from different perspectives with the common goal of identifying and understanding large scale biodiversity patterns *Marine Macroecology* will inspire the next wave of marine ecologists to approach their research from a macroecological perspective

The Routledge Handbook of Landscape Ecology Robert A. Francis, James D.A. Millington, George L.W. Perry, Emily S. Minor, 2021-09-08 The Handbook provides a supporting guide to key aspects and applications of landscape ecology to underpin its research and teaching A wide range of contributions written by expert researchers in the field summarize the latest knowledge on landscape ecology theory and concepts landscape processes methods and tools and emerging frontiers Landscape ecology is an interdisciplinary and holistic discipline and this is reflected in the chapters contained in this Handbook Authors from varying disciplinary backgrounds tackle key concepts such as landscape structure and function scale and connectivity landscape processes such as disturbance flows and fragmentation methods such as remote sensing and mapping fieldwork pattern analysis modelling and participation and engagement in landscape planning and emerging frontiers such as ecosystem services landscape approaches to biodiversity conservation and climate change Each chapter provides a blend of the latest scientific understanding of its focal topics along with considerations and examples of their application from around the world An invaluable guide to the concepts methods and applications of landscape ecology this book will be an important reference text for a wide range of students and academics in ecology geography biology and interdisciplinary environmental studies

Global Change in Multispecies Systems: Part III, 2013-09-06 *Advances in Ecological Research* is one of the most successful series in the highly competitive field of ecology Each volume publishes topical and important reviews interpreting

ecology as widely as in the past to include all material that contributes to our understanding of the field Topics in this invaluable series include the physiology populations and communities of plants and animals as well as landscape and ecosystem ecology Topical and important reviews Interpreting ecology as widely as in the past to include all material that contributes to our understanding of the field Topics include the physiology populations and communities of plants and animals as well as landscape and ecosystem ecology **Confronting Scale in Archaeology** Gary Lock, Brian Molyneaux, 2007-11-15 Without realizing most archaeologists shift within a scale of interpretation of material culture Material data is interpreted from the scale of an individual in a specific place and time then shifted to the complex dynamics of cultural groups spread over time and place This book discusses the cultural social and spatial aspects of scale and its impact on archaeology and shows how an improved awareness of scale offers new and exciting interpretations
