Integrated Assessment of Scale Impacts of Watershed

Intervention V. Ratna Reddy, Geoffrey J. Syme, 2014-10-06 Integrated Assessment of Scale Impacts of Watershed

Interventions is the outcome of a multi-disciplinary research team of social scientists, hydrologists, groundwater and surface water modellers and biophysical scientists who have worked together over five years to develop an integrated model of the sustainability of biophysical, economic and social impacts of watersheds. Impacts of watershed interventions are assessed at upstream, mid-stream and downstream locations of two hydrological units that are characterised with differential biophysical attributes. The editors propose that watershed interventions when integrated with hydrogeology and biophysical aspects have greater influence on the resilience of the socio-ecological system. This book takes these aspects into consideration and in the process provides insights into watershed design and implementation. Integrates hydrogeology, biophysical and socioeconomic aspects of watersheds in a hydrological context. Provides a comprehensive understanding of the impacts of watershed interventions. Assesses the role of watershed interventions in enhancing household resilience. Provides hydrological and socioeconomic methodologies for design of sustainable watershed interventions including scale and institutional arrangements for implementing and sustaining watershed interventions.

Bridging Scales and Knowledge

Systems Walter World Resources Institute, Millennium Ecosystem Assessment, 2013-04-09 Bridging the gap between local knowledge and western science is essential to understanding the world's ecosystems and the ways in which humans interact with and shape those ecosystems. This book brings together a group of world-class scientists in an unprecedented effort to build a formal framework for linking local and indigenous knowledge with the global scientific enterprise. Contributors explore the challenges, costs and benefits of bridging scales and knowledge systems in assessment processes and in resource management. Case studies look at a variety of efforts to bridge scales, providing important lessons concerning what has worked, what has not, and the costs and benefits associated with those efforts. Drawing on the groundbreaking work of the Millennium Ecosystem Assessment, *Bridging Scales and Knowledge Systems* will be indispensable for future efforts to conduct ecosystem assessments around the world.

Water Treatment in Urban Environments: A Guide for the

Implementation and Scaling of Nature-based Solutions Veeriah Jegatheesan, Perlie Velasco, Nevelina Pachova, 2024-03-02 The value of implementing nature-based solutions (NbS) for water treatment in urban environments is increasingly recognized due

to the multiple ecosystem services and societal benefits they provide. The successful implementation of NbS for urban water treatment however depends on a range of diverse technical and societal factors that need to be taken into account. Those vary by the type of NbS implemented, the societal challenges the NbS are designed to address and the local ecological, socio-economic and political context in which the solutions are implemented. This book provides a collection of guidelines for the implementation of three types of NbS for water treatment in urban environments across cities in South Southeast Asia: namely constructed wetlands, green roofs and floating treatment wetlands. The guides were developed based on existing experiences with the establishment, operation and maintenance of those three types of NbS in three different countries in South Southeast Asia and the lessons learnt from their implementation. They provide detailed outlines of suggested steps for ensuring successful implementation in the respective local contexts. Those include overall planning, schemes, surveys for socio-economic evaluations, suggested methods for construction and associated costs, required maintenance as well as a range of operational monitoring parameters. It also includes examples of approaches for the scaling of the three types of NbS discussed in the book in their respective local contexts. This book is expected to benefit local government units and contractors and other stakeholders involved in NbS implementation and up scaling as well as researchers and postgraduate students who plan to conduct pilot scale studies on NbS.

Scale-Sensitive Governance of the Environment Frans Padt, Paul Opdam, Nico Polman, Catrien Termeer, 2014-03-10

Sensitivity to scales is one of the key challenges in environmental governance. Climate change, food production, energy supply and natural resource management are examples of environmental challenges that stretch across scales and require action at multiple levels. Governance systems are typically ill equipped for this task due to organisational and jurisdictional specialisation and short term planning horizons. Further to this, scientific knowledge is fragmented along disciplinary lines and research traditions in academia and research institutions. State of the art *Scale Sensitive Governance of the Environment* addresses these challenges by establishing the foundation for a new trans disciplinary research field. It brings together and reframes a variety of disciplinary approaches using the idea of scales to create a conceptual and methodological basis for scale sensitive governance of the environment from both a natural and social science perspective. This volume presents new visions, methods and innovative applications of thinking and decision making across scales in space and time to develop a holistic view on the subject. It is unique in providing an analysis on how spatial, temporal and governance scales are constructed, politically and scientifically defined, institutionalized in governance practices and strategically used in policy discourses. It details on how current environmental governance practices can be enriched by the use of theory on scale with specific research themes to show the benefits of recognizing scales in empirical research. It includes insightful case studies drawn from countries in the Americas, Eastern and Southern Africa, Europe and South and Southeastern Asia covering a wide range of environmental topics including biodiversity, climate change, commodities, tea and palm oil, cultural landscapes, energy, forestry, natural resource management, pesticides, urban development and water.

management With its comprehensive coverage of scale and scaling issues and convergence of widely different scientific approaches this book is essential for environmental scientists policy makers and planners also conservation biologists and ecologists who are involved in modeling climate change impacts and sustainability This reference will also benefit students of environmental studies and all those who seek a response to the urgent environmental governance challenges for the decades ahead *Scaling and Uncertainty Analysis in Ecology* Jianguo Wu,K. Bruce Jones,Harbin Li,Orie L. Loucks,2006-07-02

Primarily the book draws together a series of important case studies to provide a comprehensive review and synthesis of the most recent concepts theories and methods in scaling and uncertainty analysis It compares current definitions and ideas concerning scale within a coherent framework and examines two key scaling approaches similarity based scaling which is rooted in the idea of similitude or self similarity and dynamic model based scaling which emphasizes processes and mechanisms With case studies focusing on issues ranging from population to ecosystem processes from biodiversity to landscape patterns and from basic research to multidisciplinary management and policy making the book will appeal to both researchers and practitioners working on landscape issues It will also provide a valuable resource for graduate students and professional trainees in ecology environmental policy resource management and global change science

Approaches and frameworks for management and research in small-scale fisheries in the developing world , Integrating Scale in Remote Sensing and GIS Dale A. Quattrochi,Elizabeth Wentz,Nina Siu-Ngan Lam,Charles W. Emerson,2017-01-06

Integrating Scale in Remote Sensing and GIS serves as the most comprehensive documentation of the scientific and methodological advances that have taken place in integrating scale and remote sensing data This work addresses the invariants of scale the ability to change scale measures of the impact of scale scale as a parameter in process models and the implementation of multiscale approaches as methods and techniques for integrating multiple kinds of remote sensing data collected at varying spatial temporal and radiometric scales Researchers instructors and students alike will benefit from a guide that has been pragmatically divided into four thematic groups scale issues and multiple scaling physical scale as applied to natural resources urban scale and human health social scale Teeming with insights that elucidate the significance of scale as a foundation for geographic analysis this book is a vital resource to those seriously involved in the field of GIScience
