Scarcity Or Abundance A Debate On The Environment:

Scarcity Or Abundance? Norman Myers, Julian Lincoln Simon, 1994-01-01 A debate between an environmentalist and a critic of the environmental movement covers population growth biodiversity soil erosion and the economics of environmental protection Scarcity Or Abundance?: A Debate on the Environment Norman Myers, Julian L. Simon, 1994-08-01 These and

other questions are discussed by environmentalist Norman Myers and Julian Simon an economist and outspoken sceptic on environmentalism This book is a transcript of their provocative exchange in a debate held at Columbia University in October 1992 The authors also provide position statements and replies that let readers judge for themselves whose arguments are more persuasive **Environmental Security** Rita Floyd, Richard Matthew, 2013-01-04 Economic development population

growth and poor resource management have combined to alter the planet's natural environment in dramatic and alarming ways For over twenty years considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security At one extreme lie sceptics who contend that the linkages are weak or even non-existent they are simply attempts to harness the resources of the security arena to an environmental agenda At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century indeed the very future of humankind may be at stake This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security It provides a framework for representing and understanding key areas of intellectual convergence and disagreement clarifying achievements of the research as well as identifying its weaknesses and gaps Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage Part II explores the linkage through analysis of key issue areas such as climate change energy water food population and development Finally the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future This volume is the first to provide a comprehensive overview of the field With contributions from around the world it combines established and emerging scholars to offer a platform for the next wave of research and policy activity It is invaluable for both students and practitioners interested in international relations environment studies and human geography **Property Rights and the Environment** Susan

Hanna, Mohan Munasinghe, 1995 The collection of papers in this book and its companion volume Property Rights in Social and Ecological Context Case Studies and Design Applications 6 examine the relationships between people the environment and property rights and the ways in which a given social and ecological context affects those relationships The papers are products of a research program at the Royal Swedish Academy of Sciences Stockholm The main objective of the program was to convene social scientists and natural scientists to address research questions in their full social and ecological dimensions The program's participants addressed five general issues related to property rights and the environment 1 the design of

governance systems for sustainability 2 the relationship between equity stewardship and environmental resilience 3 the use of traditional knowledge in resource management 4 the mechanisms that link people to their environments and 5 the role played by population and poverty The companion volume presents case studies that address questions of design application in those five areas 6 Also available Property Rights in a Social and Ecological Context Case Studies and Design Applications ISBN 0 8213 3416 6 Stock No 13416 **Principles of Environmental Economics and Sustainability** Ahmed

Hussen,2012-11-12 Recent years have witnessed considerable consolidation between the disciplines of environmental and ecological economics at research level but until now textbooks in the area have done little to reflect this Ahmed Hussen's book is to date the only one to reconcile the two standpoints The central focus of the book will continue to be on this systematic integration of both mainstream and ecological approaches to environmental economics and an acknowledgement that enduring solutions to major contemporary environmental challenges can be obtained through studies based on a well conceived and balanced interdisciplinary approach However this third edition also contains much that is new Chiefly brand new chapters appear covering the following topics The economics of climate change The economics of biodiversity and ecosystem services Green accounting and alternative economic and social indicators of sustainability The business case for environmental sustainability An Appendix that provides a brief historical account of the development of ecological economics The result is a comprehensive introduction to the main facets of environmental and ecological economics a text that boldly refuses to put up barriers between disciplines and takes a holistic approach to vital issues This student friendly textbook contains a variety of study tools including learning points boxed features case studies revision questions and discussion questions and an Appendix that provides students with a review of basic economic principles relevant to the study of the environment and its management Written in a clear and accessible style this book will prove an excellent choice for introducing both students and academics to the world of environmental economics **Responding to Environmental**

Conflicts: Implications for Theory and Practice Eileen Petzold-Bradley,Alexander Carius,Árpád Vincze,2012-12-06 A comprehensive tour d horizon of the debate on the environment and security focusing on the various policy options for building peace and preventing environmental conflict Experts from the areas survey the key environmental challenges in Eastern and Central European states and those of the former Soviet Union extending the debate to such regions as the Balkans the Black Sea and Central Europe This is the first time such extensive case study research has been reported for these regions Both practical and theoretical approaches to the debate are presented within a multi disciplinary framework the contributors ranging from academic experts involved with peace and conflict research to actual policy makers active in the fields of environmental and security policy Readership Experts already working in the relevant disciplines both academic and governmental as well as those seeking an introduction to the various policy fields A graduate level study text excellent survey for policy makers and an academic contribution to ongoing studies **Environmental Change and Security**

Project Report ,2002 Environmental Security and Gender Nicole Detraz,2014-08-21 Over the past 20 years scholars policymakers and the media have increasingly recognized the links between both traditional and non traditional security issues and the changing condition of the global environment Concepts such as environmental security and resource conflict have been used to hint at these significant linkages While there has been a good deal of scholarly work conducted that seeks to identify the ways that actors link these concepts there has been little examination of the intersection between approaches to environmental security and gender This book explores this intersection to provide an insight into the gendered nature of both global environmental politics and security studies It examines how the issues of security and the environment are linked to theory and practice and the extent to which gender informs these discussions By adopting a feminist environmental security discourse this book provides crucial redefinitions of key concepts and offers new insights into the ways we understand security environment connections Case studies evaluate if and how environment and security discourses are being used to understand a range of environmental issues and how a feminist environmental security discourse contributes to our understanding of security environment connections This multidisciplinary volume draws on literature from the environmental sciences security studies and sociology to highlight the complex human insecurities that often accompany environmental change As conceptualizations of security continue to shift and broaden to include environmental issues and concerns it is imperative that gender informs the debate *On Borrowed Time* John E. Tilton,2010-09-30 The sharp rise in mineral use has revived concern about scarcity Economist John Tilton responds by analyzing recent trends in the consumption and availability of minerals that are most integral to the needs of modern civilization He reminds readers that if the arguments about scarcity sound familiar it is because the story of minerals scarcity is almost as old as human history and so too is substitution and technological innovation The issue at hand is the unprecedented acceleration in exploitation and use Given global population growth rising living standards and environmental concerns how seriously should today s society take the threat of mineral exhaustion *On Borrowed Time* provides general interest and student readers with an accessible framework for understanding scarcity Tilton defines important concepts and explores the methods used to study mineral scarcity including physical measures of known reserves and the total resource base and economic measures such as extraction and end user costs He notes the increasing emphasis on the social and environmental costs of mineral production and use placing the scarcity debate in context of broader concerns about sustainability and equity He adds a history of thought about scarcity from Malthus and Ricardo to Harold Hotelling Donella Meadows to the present day *Security and Environment in the Mediterranean* Hans Günter Brauch,Peter H. Liotta,Antonio Marquina,Paul F. Rogers,Mohammad El-Sayed Selim,2012-12-06 In this volume security specialists peace researchers environmental scholars demographers as well as climate desertification water food and urbanisation specialists from the Middle East and North Africa Europe and North America review security and conflict prevention in the Mediterranean They also analyse NATO s Mediterranean

security dialogue and offer conceptualisations on security and perceptions of security challenges as seen in North and South. The latter half of the book analyses environmental security and conflicts in the Mediterranean and environmental consequences of World War II, the Gulf War, the Balkan wars and the Middle East conflict. It also examines factors of global environmental change, population growth, climate change, desertification, water scarcity, food and urbanisation issues as well as natural disasters. Furthermore, it draws conceptual conclusions for a fourth phase of research on human and environmental security and peace as well as policy conclusions for cooperation and partnership in the Mediterranean in the 21st century.
