

Your task is to construct an E-R diagram and the resulting normalized tables to solve the scenario below. You should present your results beginning with a Conceptual ERD (your initial impression of the scenario) and the corresponding Dependency Diagrams. From this continue to normalize until you have a complete set of related tables.

Your task is to develop the database design for a business that has multiple stores. They would like to be able to track the sale of products to customers, as well as inventory level per store.

HINTS:

- Begin by looking at the customer.
 - Customer Products (1:M)
- Take a top-down approach; start with E-R and move to attribute definition
- Look for partial and transitive dependencies
- Remember to make attributes as atomic as possible
- Feel free to add any attributes you think are necessary

Requirements:

In this assignment, you are responsible for the following:

- E-R diagram based on your initial view of the database
- Dependency diagram(s) showing your entity definition
- Entity definition; list all fields, primary key, and foreign keys
