ABSTRACT

Every young generation needs to be able to control modern computers. Therefore, one of the first and most important tasks of school computer science is to form a clear way of thinking in students.

The form and method of teaching should be aimed at developing the thinking and creative abilities of young students. The challenge is to develop students' thinking and creativity on the one hand, and to give them an interesting and relevant knowledge of the modern computer world on the other.

This article has sufficiently revealed the current problems of teaching computer science in schools, the prospects for their solution. Information was provided on the methods of interaction between the participants of the learning process in the teaching of computer science.

KEYWORDS: school, computer science, information technology, computer science teaching, computer literacy, computer education, internet resource.

INTRODUCTION:

The main difference between the new information environment and the traditional one is that it consists of a small technological system. After all, the integration of information and communication technologies in the educational process of any educational institution is accompanied by radical changes in all other didactic, organizational, economic, theoretical and methodological subsystems of education.

In order to effectively use the opportunities of the information educational environment, the teacher as a consumer must have a full set of technical capabilities for the intended purpose.

Today, everyone is deeply concerned about the future of their child, especially the education he or she receives. By sending their children to school, they will acquire the necessary knowledge in the process of education, all-round development, and the fact that parents are responsible for the upbringing of their children by the school and teachers will determine its future. In this regard, there is a need to reconsider the current position and traditions of the educational process, to improve
