Seabirds Of Hawaii Natural History And Conservation:

Seabirds of Hawaii Craig S. Harrison, 2019-05-15 Hawaii is known throughout the world for its uniquely hospitable climate and people. Because of its geographical isolation and tropical subtropical location, it harbors numerous animals that are unknown elsewhere in the United States. Unfortunately, Hawaii is special in another respect: it is the endangered species capital of the world. Many of its birds are in jeopardy of extinction. This book, the first to portray a tropical seabird community, treats the 22 species of seabirds of the Hawaiian archipelago from a conservationist point of view. Craig S. Harrison first establishes the setting, describing Hawaii's birth from undersea volcanoes, its marine biology, and the effects of Polynesians and Westerners on its pristine island ecosystem. He summarizes current knowledge of albatrosses, shearwaters, petrels, frigatebirds, boobies, tropicbirds, terns, and noddies, explaining their similarities and differences with respect to nesting, food habits, migration at sea, and adaptation to a tropical environment. *Regional Seabird Conservation Plan*, 2005

Hawaiian Natural History, Ecology, and Evolution Alan C. Ziegler, 2002-09-30 Not since William A. Bryan's 1915 landmark compendium *Hawaiian Natural History* has there been a single volume work that offers such extensive coverage of this complex but fascinating subject. Illustrated with more than two dozen color plates and a hundred photographs and line drawings, *Hawaiian Natural History: Ecology and Evolution* updates both the earlier publication and subsequent works by compiling and synthesizing in a uniform and accessible fashion the widely scattered information now available. Readers can trace the natural history of the Hawaiian Archipelago through the book's twenty-eight chapters or focus on specific topics such as island formation by plate tectonics, plant and animal evolution, flightless birds, and their fossil sites; Polynesian migrational history and ecology; the effects of humans and exotic animals on the environment; current conservation efforts; and the contributions of the many naturalists who visited the islands over the centuries and the stories behind their discoveries. An extensive annotated bibliography and a list of audio-visual materials will help readers locate additional sources of information. *Conservation of Marine Birds* Lindsay Young, Eric VanderWerf, 2022-09-27 *Conservation of Marine Birds* is the first book to outline and synthesize the myriad of threats faced by one of the most imperiled groups of birds on earth. With more than half of all 346 seabird species worldwide experiencing population declines and 29% of species recognized as globally threatened by the International Union for Conservation of Nature, the timing to determine solutions to threats could not be more urgent. Written by a diverse team of international experts on marine birds, this book explores the environmental and biogeographical factors that influence seabird conservation and provides concrete recommendations for mounting climate change issues. This book will be an important resource for researchers and conservationists as well as ecologists and students who want to understand seabirds, the threats they are facing, and tactics to help conserve and protect them. Outlines both threats and solutions in the marine and terrestrial realm. Synthesizes information to provide a comprehensive strategy moving forward, especially considering climate change. Hawai'i's White Tern Susan Scott, 2018-11-15 White Terns are native throughout the world's tropics and subtropics where they breed almost exclusively on remote islands that are free of predators like cats dogs rats and mongooses Historically this was also true in Hawai'i but in 1961 a pair of White Terns laid an egg and raised a chick near Hanauma Bay Since then their numbers in the city of Honolulu have steadily increased and in 2007 the White Tern also known by its Hawaiian name Manu o K was designated the official bird of the City and County of Honolulu Other native seabirds nest on Oahu and its nearby islands but the graceful White Tern is the only species known to lay its eggs in the city's nonnative trees on window ledges and on other man made structures making Honolulu unique among world cities People who live in apartment buildings and work in office towers can watch parents brooding eggs and feeding chicks An energetic fishing bird the Manu o K can fly far from land in its search for fish and squid Sailors on traditional voyaging canoes keep a close eye on them as the sun starts to go down the birds head home effectively providing the bearing of nearby islands Today White Terns are a common sight in Honolulu from downtown parks to Nuuanu and Mouna valleys to bustling Waikiki and the photogenic birds are gaining in popularity as their range increases In bringing together data about White Terns from here and abroad marine biologist Susan Scott has crafted a reliable informative resource filled with remarkable photographs for anyone curious about Manu o K Honolulu's official bird
