Seamounts Tony J. Pitcher, Telmo Morato, Paul J. B. Hart, Malcolm R. Clark, Nigel Haggan, Ricardo S. Santos, 2008-04-15 Seamounts are ubiquitous undersea mountains rising from the ocean seafloor that do not reach the surface There are likely many hundreds of thousands of seamounts they are usually formed from volcanoes in the deep sea and are defined by oceanographers as independent features that rise to at least 0.5 km above the seafloor although smaller features may have the same origin This book follows a logical progression from geological and physical processes ecology biology and biogeography to exploitation management and conservation concerns In 21 Chapters written by 57 of the world's leading seamount experts the book reviews all aspects of their geology ecology biology exploitation conservation and management In Section I of this book several detection and estimation techniques for tallying seamounts are reviewed along with a history of seamount research This book represents a unique and fresh synthesis of knowledge of seamounts and their biota and is an essential reference work on the topic It is an essential purchase for all fisheries scientists and managers fish biologists marine biologists and ecologists environmental scientists conservation biologists and oceanographers It will also be of interest to members of fish and wildlife agencies and government departments covering conservation and management Supplementary material is available at www seamountsbook info Geophysical Monograph, 1956 approach to management of seamounts in the Southern Indian Ocean: volume 2: anthropogenic threats to seamount ecosystems and biodiversity. Tribble, 1997 Tsunami Edward Bryant, 2008-01-29 Tsunamis are underrated as major hazards mainly due to the misconceptions that they occur infrequently and happen along some distant shoreline However evidence for past great tsunami has recently been discovered along apparently aseismic and protected coastlines such as those of Australia and Western Europe This is a comprehensive and well illustrated textbook on all aspects of tsunami It can be used by a student or layperson to gain encyclopedic knowledge about tsunami Deep-Sea Biology John D. Gage, Paul A. Tyler, 1991-04-18 This timely volume provides a comprehensive account of the natural history of the organisms associated with the deep sea floor and examines their relationship with this inhospitable environment perhaps the most remote and least accessible location on the planet The authors begin by describing the physical and chemical nature of the deep sea floor and the methods used to collect and study its fauna Then they discuss the ecology of the deep sea by exploring spatial patterns diversity biomass vertical zonation and large scale distribution of organisms Subsequent chapters review current knowledge of feeding respiration reproduction and growth processes in these communities The unique fauna of hypothermal vents and seeps are considered separately Finally there is a pertinent discussion of human exploitation of deep sea resources and potential use of this environment for waste

disposal In Deeper Waters Edith H. Chave, Alexander Malahoff, 1998-03-01 Thousands of meters beneath the surface of Hawaii s warm sunlit waters lies the vast Hawaiian Ridge a dark cold region more than 2 600 kilometers in length Its undersea mountains sediment plains lava flows and volcanic vent fields are home to a variety of unusual deep sea organisms Since 1965 the ridge's unique geological features and animal communities have been studied with the aid of submersibles This copiously illustrated volume describes 200 animals and geological formations photographed and collected by the University of Hawaii s HURL Hawaii Undersea Research Laboratory submersibles around the Hawaiian Islands Cross Seamount Loihi Volcano and Johnston Atoll In Deeper Waters is a valuable record for the professional and amateur marine biologist and geologist alike and adds substantially to our knowledge of deep sea floor features and the distribution and behavior of their inhabitants Island Dynamical Systems: Atmosphere, Ocean and Biogeochemical Processes Rui Caldeira, Miguel A.
