Baby Boomers Naomi Woodspring,2016-07-01 This ground breaking study of the baby boomer generation who are now entering old age breaks new ground in ageing research This post war cohort has experienced a range of social cultural and medical changes in regard to their notions of body from the introduction of the Pill and the decoupling of sex and procreation to the H Bomb and Earthrise Yet paradoxically ageing is also universal This exciting book reflects the intersection of time ageing body and identity to give a more nuanced and enlightened understanding of the ageing process

Springer Handbook of Nanotechnology Bharat Bhushan,2004-01-19 This major work has established itself as the definitive reference in the nanoscience and nanotechnology area in one volume In presents nanostructures micro nanofabrication and micro nanodevices Special emphasis is on scanning probe microscopy nanotribology and nanomechanics molecularly thick films industrial applications and microdevice reliability and on social aspects Reflecting further developments the new edition has grown from six to eight parts The latest information is added to fields such as bionanotechnology nanorobotics and NEMS

MEMS reliability This classic reference book is orchestrated by a highly experienced editor and written by a team of distinguished experts for those learning about the field of nanotechnology *Biology of Aging* Robert Arking, 2006-02-02 Robert Arking's *Biology of Aging* 3rd edition is an introductory text to the biology of aging which gives advanced undergraduate and graduate students a thorough review of the entire field His prior two editions have also served admirably as a reference text for clinicians and scientists This new edition captures the extraordinary recent advances in our knowledge of the ultimate and proximal mechanisms underlying the phenomenon of aging As a result six important conceptual changes are included here Clarified distinctions between the biological mechanisms involved in longevity determination and those involved in senescent processes A new conceptual framework around which we can organize all the new facts about aging This will assist readers to make sense of the information and use the data to form their own ideas Increased knowledge of aging cells has led to new ideas on how a cell transits from a healthy state to a senescent state while still allowing for high levels of intra and inter specific variability Discussion of senescent mechanisms assists the reader to understand that aging is a non programmatic loss of function likely arising from the loss of regulatory signals and so is modifiable in the laboratory Because the standard evolutionary story does not fully explain the evolution of social organisms this edition also includes recent work dealing with intergenerational resource transfers Lastly if aging mechanisms are plastic then the demand to move these anti aging interventions into the human arena will inevitably grow A discussion of the biological and ethical arguments on both sides of the question frames the question in an appropriate manner The mass of data related to aging is summarized into fifteen focused chapters each dealing with some particular aspect of the problem The last two chapters integrate all this material into a coherent view of how the relevant biological processes change over the life span This view is expressed in two non technical figures you might say that the whole book exists to fully support Figs 9 4 14 9 whose meanings are elucidated as the reader progresses through the book

Global Ageing in the Twenty-First Century Zachary Zimmer, 2016-04-22 Population ageing a growth in the proportion of a population that is in older age is now occurring in every region and nearly every country of the world Indeed the growth of older populations is among the important global phenomena of the twenty first century It poses both opportunities and challenges for societies and policy makers but these are far from uniform worldwide Dynamic factors are at work impacting on how ageing will influence people places and policies and there are large variations in the rate and timing of population ageing across countries owing to differing social health and economic circumstances and a variety of policy options from which to choose Given this variation in the context of global ageing as a backdrop this edited book focuses on three overarching themes that are among the most critical to understand if societies are to age successfully in the twenty first century and beyond Healthy ageing and health care the ageing workforce retirement and the provision of pensions shifting intergenerational relations These three themes are cross cut by other dimensions that are intertwined with the dynamic processes of ageing such as immigration emigration contrasting policy regimes and global and national

Katz,2001 Readers Reading and Librarians reaffirms librarians enthusiasm for books and readers in the midst of the evolution of libraries from reading centers to information centers where librarians are now Web masters information scientists and media experts It explores the future of the book as a medium and examines reasons for the decline in pleasure reading and the need for librarians to sponsor book groups With nearly two hundred open ended interviews with readers who read for pleasure this book looks at how and why they choose or reject certain books **A Public Health Perspective on End of Life Care** Joachim Cohen,Luc Deliens,2012-01-19 Worldwide more than 50 million people die each year and it is estimated on the basis of the conditions leading to death that up to 60% of them could benefit from some form of palliative care It is a public health challenge to ensure that these people can access good palliative or end of life care Pursuing good population health essentially also implies striving for a good enough death and a good quality of care at the end of life Safeguarding a good quality of the end of life for patient populations for whom it is appropriate requires a public health approach In most developed countries

ageing populations that increasingly die from chronic diseases after a prolonged often degenerative dying trajectory make up the public health challenges for palliative care. The very large baby boom generation will soon reach old age and can be expected to pose strong demands regarding the circumstances and care at their end of life. Only by applying a public health approach to palliative care instead of individual patient perspectives can societies successfully help to organize and plan end of life care in accordance with these aspirations. A Public Health Perspective on End of Life Care presents a synthesis and overview of relevant research and empirical data on the end of life that can bear a basis for a more systematic public health of the end of life. The book focuses on population health rather than clinical interventions or other aspects of individual health and discusses studies using different methodologies not only epidemiological research. The focus is on the quality of the end of life of populations in particular from social sciences, environmental sciences and humanities perspectives.
