**Magic and the Mind** Eugene Subbotsky, 2010-03-31 Magical thinking and behavior have traditionally been viewed as immature misleading alternatives to scientific thought that in children inevitably diminish with age In adults these inclinations have been labeled by psychologists largely as superstitions that feed on frustration uncertainty and the unpredictable nature of certain human activities In *Magic and the Mind* Eugene Subbotsky provides an overview of the mechanisms and development of magical thinking and beliefs throughout the life span while arguing that the role of this type of thought in human development should be reconsidered Rather than an impediment to scientific reasoning or a byproduct of cognitive development in children magical thinking is an important and necessary complement to these processes enhancing creativity at problem solving and reinforcing coping strategies among other benefits In adults magical thinking and beliefs perform important functions both for individuals coping with unsolvable problems and stressful situations and for society enabling mass influence and promoting social harmony Operating in realms not bound by physical causality such as emotion relationships and suggestion magical thinking is an ongoing developing psychological mechanism that Subbotsky argues is integral in the contexts of politics commercial advertising and psychotherapy and undergirds our construction and understanding of meaning in both mental and physical worlds *Magic and the Mind* represents a unique contribution to our understanding of the importance of magical thinking offering experimental evidence and conclusions

**The General Factor of Intelligence** Robert J. Sternberg, Elena L. Grigorenko, 2002-05-01. This edited volume presents a balanced approach to the ongoing debate of just how general the general factor of intelligence is. To accomplish this goal, the editors chose a number of distinct approaches to the study of intelligence: psychometric, genetic, epistemological, cognitive, biological, behavior genetic, sociocultural systems, and asked distinguished scholars to write from the standpoint of these approaches. Each approach comprises two chapters, one by a scholar leaning toward a view arguing for the greater generality of *g* and the other by a scholar leaning toward a view arguing for the lesser generality of *g*. The scholars are not simply for or against these outlooks; rather, they provide a more textured view of the general factor, attempting to explain it in psychological terms that are easily understandable. Intended for psychologists in all areas including clinical, consulting, educational, cognitive, school, developmental and industrial.
