Magnesium in Cellular Processes and Medicine B. M. Altura, J. Durlach, M. S. Seelig, S. Mildred, 1987-09-11 *The Cellular Basis of Cardiovascular Function in Health and Disease* Pawan K. Singal, Vincenzo Panagia, Grant N. Pierce, 2012-12-06 This special issue of Molecular and Cellular Biochemistry contains original research articles and review papers which were invited from the participants of a recent meeting organized to honour the 60th birthday of Naranjan S. Dhalla. Ph.D., M.D., Hon. The meeting organized by Drs. Morris Karmazyn (London), Grant Pierce (Winnipeg) and Balwant Tuana (Ottawa) was held at the Best Western Lakeside Inn in Kenora, Ontario, Canada, on August 23-25, 1996. The meeting was entitled "The Cellular Basis of Cardiovascular Function in Health and Disease." There were over 40 invited speakers from 15 different countries represented at the meeting attended by over 280 people. Keynote lectures were presented by Drs. Norman Alpert (Burlington, VT), Robert Jennings (Chapel Hill, NC), Makoto Nagano (Tokyo, Japan), Howard Morgan (Danville, PA), John Solaro (Chicago, IL), and Nobuskira Takeda (Tokyo, Japan). Dr. Henry Friesen, President of the Medical Research Council of Canada, presented Dr. Dhalla with a plaque at the banquet honouring his research accomplishments over his distinguished career. Dr. Dhalla's outstanding research achievements in understanding the subcellular basis of cardiovascular disease were highlighted at the meeting. One of the unique aspects of the meeting was the special effort made by 39 former trainees of Dr. Dhalla to attend the meeting to honour their mentor. The ex-students and trainees came from all over Canada, the United States, Japan, Slovakia, Germany, the Czech Republic, Estonia, and the Netherlands. The meeting was judged to be an overwhelming success in terms of the scientific content as well as collaborative interactions initiated. Biological and Medical Research in Space David Moore, Peter Bie, Heinz Oser, 2012-12-06 Life Science studies in space were initially driven by the need to explore how man could survive spaceflight conditions the effects of being launched under high accelerations exposed to weightlessness and radiation for different periods of time and returned to Earth in safety In order to substantiate the detailed knowledge of potentially adverse effects many model experiments were launched using organisms which ranged from bacteria plants invertebrates rodents and primates through to man Although no immediate life threatening effects were found these experiments can be considered today as the precursors to life science research in space Many unexplained effects on these life forms were attributed to the condition of weightlessness Most of them were poorly recorded poorly published or left simply with anecdotal information Only with the advent of Skylab and later Spacelab did the idea emerge and indeed the infrastructure permit weightlessness to be considered as an extended tool for research into some fundamental mechanisms or processes associated with the effect of gravity on organisms at all levels The initial hypothesis to extrapolate from hypergravity through 1 x g to near 0 x g effects could no longer be retained since many of the experiment results were seen to contradict the models or theories in the current textbooks of biology and physiology The past decade has been dedicated primarily to exploratory research
