*Research Grants Index* National Institutes of Health (U.S.). Division of Research Grants, 1972      *Scientific and Technical Aerospace Reports*, 1966      **Research Awards Index**,      *The Jahn-Teller Effect and Vibronic Interactions in Modern Chemistry* Isaac Bersuker, 2013-06-29 The first half of the title of this book may delude the uninitiated reader The term Jahn Teller effect taken literally refers to a special effect inherent in particular molecular systems Actually this term implies a new approach to the general problem of correlations between the structure and properties of any molecular polyatomic system including solids Just such a new approach or concept in some sense a new outlook or even a new way of thinking which leads not to one special effect but to a series of different effects and laws is embodied in the many 4000 studies devoted to the investigation and application of the Jahn Teller effect The term vibronic interactions seems to be most appropriate to the new concept and this explains the origin of the second half of the title The primary objective of this book is to present a systematic development of the concept of vibronic interactions and its applications and to illustrate its possibilities and significance in modern chemistry In the first three chapters covering about one third of the book the theoretical background of the vibronic concept and Jahn Teller effect is given The basic ideas are illustrated fully although a comprehensive presentation of the theory with all related mathematical deductions is beyond the scope of this book In the last three chapters the applications of theory to spectroscopy stereochemistry and crystal chemistry reactivity and catalysis are illustrated by a series of effects and laws      **Characterization of Biological Membranes** Mu-Ping Nieh, Frederick A. Heberle, John Katsaras, 2019-07-22 The study of membranes has become of high importance in the fields of biology pharmaceutical chemistry and medicine since much of what happens in a cell or in a virus involves biological membranes The current book is an excellent introduction to the area which explains how modern analytical methods can be applied to study biological membranes and membrane proteins and the bioprocesses they are involved to      **BLL Conference Index, 1964-1973** British Library. Mechanism in Heterogeneous Catalysis The first of these was held in Lyon France in 1986 the second in Krakow Poland in 1988 and the third in Berkeley California in 1990 The organising committee of the present meeting was Bernard Bigot France Tony Farragher Netherlands Richard Joyner UK Mme Danielle Olivier France and Rutger van Santen Netherlands Chairman We wish to thank all members of the committee but in particular Bernard Bigot who undertook the very extensive work involved in the local organisation with consummate skill and made our stay in Provence a great pleasure Bernard Bigot s secretary Mme Marie Noelle Coscat and Richard Joyner s secretary Mrs Pat Gibbs also deserve our considerable thanks There were fifty four participants from eleven countries

Cell Function and Disease L. Canedo,2012-12-06 The new experimental tools and approaches of modern biology have allowed us to better understand many fundamental properties of the eukaryotic cells These significant discoveries have drastically changed the diagnostic and therapeutic approaches of

modern clinical practice On April 18 22 1988 an International Symposium on Cell Function and Disease was held in Monterrey Nuevo Leon Mexico aimed at reviewing some of the most recent advances made in the following five areas Genes and Human Diseases Cellular and Molecular Pathology Infectious Diseases Brain Transplants and the New Approaches and Techniques with Potential Application to Cell Function and Disease This book is based on the contributed papers of the symposium To underline the importance of the clinical approach to the study of cell function and disease a section on this subject was added at the end of the book The chapters in this volume include contributions by some of the leading scientists of the international scientific community and Mexico During the course of this international conference numerous discussions were held by the local and international representatives of the scientific community concerning the creation of an International Center of Molecular Medicine aimed at stimulating further interaction between molecular biologists biochemists biophysicists and clinicians Such ideas received the endorsement and support of the Director General of the United Nations Educational and Scientific Organization UNESCO Federico Mayor the Governor of the State of Nuevo Leon Jorge Trevino and the Secretary of Health of Mexico Guillermo Soberon

*Topics in Fluorescence Spectroscopy* Joseph R. Lakowicz, 2006-04-18 Fluorescence spectroscopy and its applications to the physical and life sciences have evolved rapidly during the past decade The increased interest in fluorescence appears to be due to advances in time resolution methods of data analysis and improved instrumentation With these advances it is now practical to perform time resolved measurements with enough resolution to compare the results with the structural and dynamic features of macromolecules to probe the structures of proteins membranes and nucleic acids and to acquire two dimensional microscopic images of chemical or protein distributions in cell cultures Advances in laser and detector technology have also resulted in renewed interest in fluorescence for clinical and analytical chemistry Because of these numerous developments and the rapid appearance of new methods it has become difficult to remain current on the science of fluorescence and its many applications Consequently I have asked the experts in particular areas of fluorescence to summarize their knowledge and the current state of the art This has resulted in the initial two volumes of *Topics in Fluorescence Spectroscopy* which is intended to be an ongoing series which summarizes in one location the vast literature on fluorescence spectroscopy The third volume will appear shortly The first three volumes are designed to serve as an advanced text These volumes describe the more recent techniques and technologies Volume 1 the principles governing fluorescence and the experimental observables Volume 2 and applications in biochemistry and biophysics Volume 3

Bukiya, 2019-01-16 In this book renowned scientists describe the role of steroid chirality and modification of lipid membrane physical properties in the modulation of G protein coupled receptors and ion channels The application of commonly used technical approaches such as mass spectrometry and nucleic magnetic resonance transfer spectroscopy for studies on cholesterol distribution and alteration of lipid bilayer characteristics is also discussed This book offers comprehensive insights into the current understanding of cholesterol driven modulation of protein function via mechanisms that extend beyond lipid protein direct interactions In the first part the chapters introduce the reader to the use of the chemical derivatives of cholesterol as a valuable laboratory tool in the studies of cholesterol driven modulation of protein function In the second part examples of cholesterol induced changes in membrane physical characteristics are presented and discussed in light of their multifaceted contribution to the effect of cholesterol on protein function The book will be of interest to undergraduate and graduate students as well as basic science and medical researchers with a keen interest in the biophysical properties of cholesterol and physiological consequences of cholesterol presence in biological systems Applied Science & Technology Index ,1979

**Manganese in Soils and Plants** R.D. Graham, R.J. Hannam, N.C. Uren, 2012-12-06 Sixty years ago at the Waite Agricultural Research Institute G Samuel a plant pathologist and C S Piper a chemist published their conclusion that the cause of roadside take all a disease of oats was manganese deficiency This report together with the concurrent and independent studies of W M Carne in Western Australia were the first records of manganese deficiency in Australia and came only six years after McHargue s paper which is generally accepted as the final proof of the essentiality of this element There must have been a few doubts for some people at the time however as the CAB publication *The Minor Elements of the Soil* 1940 expressed the view that further evidence to this effect was provided by Samuel and Piper Their historic contributions are recognised by the International Symposium on Manganese in Soils and Plants as it meets on the site of their early labours to celebrate the 60th anniversary This year Australians also acknowledge 200 years of European settlement in this country and so the Symposium is both a Bicentennial and a diamond jubilee event which recognises the impact of trace elements on agricultural development in Australia In a broader sense a symposium such as this celebrates as it reviews the efforts of all who over the ages have contributed to our knowledge of manganese in soils and plants
