Magnificent Foragers Smithsonian Explorations In The Natural Sciences:

The Magnificent Foragers National Museum of Natural History (Washington, D.C.), Smithsonian Institution (Washington, D.C.), 1978 *After the Vote Was Won* Katherine H. Adams, Michael L. Keene, 2014-01-10 Because scholars have traditionally examined the efforts of American suffragists only in relation to electoral politics the history books have largely missed the real story of what these women achieved far outside the realm of voting reform Though Stanton Anthony and Mott are the best known figures of the woman s suffrage movement all were dead more than a decade before women actually achieved the vote Women like Alice Paul Louisine Havemeyer and Mary Church Terrell carried on their work putting their campaign experiences to work long after the 19th Amendment was ratified This book tells the story of how these women made an indelible mark on American history in fields ranging from education to art science publishing and social activism

Scientific and Technical Books and Serials in Print , 1984 *Women in the Field* Marcia Bonta, 1991 Men generally

dominated the study of the outdoors in the late eighteenth through the early twentieth centuries. But there were women in the field too. Marcia Myers Bonta gives biographies of twenty-five of these women naturalists in this well-detailed study. Bonta divides the women by the subject of their study: naturalists, botanists, entomologists, ornithologists, and ecologists. She also describes a group of women that she considers pioneers, showing them in all their individuality as field persons, as professionals, and as friends with others in their field. A handful were recognized experts. Agnes Chase was considered the best agrostologist in the world. Alice Eastwood was made honorary president of the seventh International Botanical Congress in Sweden. Elizabeth Gertrude Knight Britton was called the mother of bryology. In the 1950s, conservationist Rachel Carson became a well-known voice in the fight against pesticides, and in 1962 she published *Silent Spring*, a chilling account of the effects of pesticides on people, wildlife, and the environment. Others were less well-known. Jane Colden did botanical work and drawing in the 1740s and 1750s with the support of her father. Martha Maxwell developed a new method of taxidermy in the 1860s, displaying animals in their habitat. Kate Brandegee of California hid her identity from the established botanical community in the East for many years, knowing they would look down on dissenting work done not only in the West but by a woman. This book provides insight and information about the history of American nature study as well as women's roles in the natural sciences.
