Mainstreams of Biology Gairdner Bostwick Moment, Helen Margaret Habermann, 1977 **Mainstreams of Biology** Gairdner B. Moment, Helen Haberman, 1977-02-01 *The American Biology Teacher*, 1938 Includes section Books
Pamphlets on Biology, 1889 *Biology pamphlets. supplement*, 1929 **Contributions to Biology from the Hopkins Laboratory of Biology**, 1897 **Biology Pamphlets**, 1901 *Contributions to Biology* Hopkins Marine Station, 1897
Reprints from various scientific periodicals **Life and Process** Spyridon A. Koutroufinis, 2014-05-21 Alfred North Whitehead is arguably the most original 20th century philosopher of nature and metaphysics In recent decades a number of physicists have produced ground breaking new theories in fundamental physics influenced by his process philosophy In contrast few biologists are even aware that Whitehead's radical rethinking of the Cartesian assumptions implicit in 19th century sciences might be relevant to their enterprise This book seeks to fill this gap by exploring how Whitehead's process ontology might provide a new philosophical foundation for the biosciences of the 21st century The central premise shared by all of the volume's authors is the idea that all living processes are irreducible processes Each chapter focuses on assumptions implicit in some of the core concepts of biology such as organism evolution information and teleology that play crucial explanatory roles in the biosciences but as metaphysical concepts fall outside its purview The authors each identify important shortcomings implicit in contemporary biological paradigms and show how an approach grounded in a process oriented metaphysics can avoid them *Biocivilisations* Predrag B. Slijepcevic, 2023-05-18 2024 Nautilus Book Award Gold Medal Winner Restorative Earth Practices A brilliant book that shows a way out of the destructive trap of Anthropocentric arrogance Vandana Shiva author of *Terra Viva* An unusually thought provoking and ambitious book Dr James A Shapiro author of *Evolution A View from the 21st Century* *Biocivilisations* is an important original rethinking of the mystery of life and its deep uncertainty exploring the complex civilisations that existed on Earth long before humans What is life Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Yet there is a growing army of scientists philosophers and artists who reject this view The gene metaphor is not only too simplistic but deeply misleading If there is a way to reduce life to a single principle that principle must acknowledge the creativity of life turning genetic determinism on its head The term *biocivilisations* is the acknowledgement of this uncertainty of life as opposed to a quasi certainty of the human position governed by a narrow time window of the scientific revolution Life existed without humans for more than 99.99 percent of the Earth's existence Life will also continue without humans long after our inevitable extinction In *Biocivilisations* Dr Predrag Slijepcevic shows how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but demonstrate elements of how we celebrate human civilisation complex communication agriculture science art medicine and more Humans must try to adopt this wisdom from other *biocivilisations* that have long preceded our own By rethinking the current scientific paradigm Dr Slijepcevic makes clear that

a transformation from a naive young species into a more mature species in tune with its surroundings will save us from our own violence and the violence we inflict on the rest of our living planet Read this book if you would like to understand the intelligence of living systems Dr Denis Noble University of Oxford
