Nobel Lecture:

Nobel Lectures In Physiology Or Medicine (2006-2010) Goran K Hansson, 2015-02-16 Physiology or medicine was the third prize area Alfred Nobel mentioned in his will Nobel had an active interest in medical research He came into contact with Swedish physiologist I ns Johansson through Karolinska Institute around 1890 Johansson worked for a brief period in Nobel's laboratory in Sevran France during the same year The Nobel Prize in Physiology or Medicine is awarded by the Nobel Assembly at Karolinska Institute This volume is a collection of the Nobel lectures delivered by the Nobel Laureates together with their biographies and the presentation speeches for the period 2006 2010 List of Laureates and their award citations 2006 Andrew Z Fire and Craig C Mello for their discovery of RNA interference gene silencing by double stranded RNA 2007 Mario R Capecchi Martin J Evans and Oliver Smithies for their discoveries of principles for introducing specific gene modifications in mice by the use of embryonic stem cells 2008 Harald zur Hausen for his discovery of human papilloma viruses causing cervical cancer and Fran oise Barr Sinoussi and Luc Montagnier for their discovery of human immunodeficiency virus 2009 Elizabeth H Blackburn Carol W Greider and Jack W Szostak for the discovery of how chromosomes are protected by telomeres and the enzyme telomerase 2010 Robert G Edwards for the development of in vitro fertilization Nobel Lectures in Peace Frederick W. Haberman, 1999 http www worldscientific com worldscibooks 10 1142 3741 **Nobel Lectures in Peace** Frederick W. Haberman, 1999 In Praise of Reading and Fiction Mario Vargas Llosa, 2011-04-12 On December 7 2010 Mario Vargas Llosa was awarded the Nobel Prize in Literature His Nobel lLecture is a resounding tribute to fiction s power to inspire readers to greater ambition to dissent and to political action We would be worse than we are without the good books we have read more conformist not as restless more submissive and the critical spirit the engine of progress would not even exist Vargas Llosa writes Like writing reading is a protest against the insufficiencies of life When we look in fiction for what is missing in life we are saying with no need to say it or even to know it that life as it is does not satisfy our thirst for the absolute the foundation of the human condition and should be better Vargas Llosa's lecture is a powerful argument for the necessity of literature in our lives today. For as he eloquently writes literature not only submerges us in the dream of beauty and happiness but alerts us to every kind of oppression The Nobel Prize and the Formation of Contemporary World Literature Paul Tenngart, 2023-10-05 An exploration of the history ambitions and impact of the Nobel Prize in literature as it gained a central position in 20th century global literary culture Few scholars would deny that the Nobel Prize is the most prestigious literary award in the world But what mechanisms made it possible for 18 Swedish intellectuals to become the world's most influential literary critics Paul Tenngart argues that the Nobel Prize in literature has become a special kind of international canonization exerted from a non central semi peripheral position the award sometimes confirms and reinforces hierarchical relations between literary languages and cultures and sometimes disturbs established patterns of dominance and dependence Drawing from a wide range of contemporary theories and

methods this multifaceted history of the Nobel Prize questions how the Swedish Academy has managed to keep the prize s global status through all the violent international crises of the last 120 years how the selection of laureates shaped the idea of universal literary values and defined literary quality across languages and cultures and what impact the prize has had on the distribution and significance of particular works literatures and languages The Nobel Prize and the Formation of Contemporary World Literature explores the history and impact of the Nobel Prize in literature from the first award in 1901 through recent controversies involving Bob Dylan and MeToo arguing that the prize is a unique performative act that has been and still is central in our continual and collective construction of world literature Legion of Peace Muhammad Yunus, Kabir Sehgal, Monica Yunus, Camille Zamora, 2018-12-11 Nobel Prize recipient Muhammad Yunus profiles 20 Nobel Peace Prize laureates with Multi Grammy winning producer and New York Times bestselling author Kabir Sehgal Monica Yunus and Camille Zamora teaching readers to incorporate lessons from each laureate s life into their own When Swedish chemist and engineer Alfred B Nobel passed in 1896 he left several millions in his will to establish the Nobel Peace Prize awarded annually in six concentrations peace literature physics chemistry physiology or medicine and economic science Since its establishment there have been over 130 Nobel Peace laureates selected each bringing his her own unique experiences and lessons forward as an example to others In LEGION OF PEACE Nobel Prize winner Muhammad Yunus Kabir Sehgal Monica Yunus and Camille Zamora profile 20 prize recipients in a narrative accompanied by songs inspired by these great leaders composed by Grammy nominated children's artist Lori Henriques Quintet and three time Grammy nominated pianist Joey Alexander Through this lyrical narrative the authors share stories of these laureates seemingly ordinary actions that transformed their lives and communities The authors assign a superpower to each laureate that exemplifies the one basic principle that guided their actions demonstrating to readers that all people from vastly different backgrounds can be connected by a common thread to come together to form a legion of peace Drawing the Map of Life Viktor K. McElheny, 2012-07-31 Drawing the Map of Life is the dramatic story of the Human Genome Project from its origins through the race to order the 3 billion subunits of DNA to the surprises emerging as scientists seek to exploit the molecule of heredity It s the first account to deal in depth with the intellectual roots of the project the motivations that drove it and the hype that often masked genuine triumphs Distinguished science journalist Victor McElheny offers vivid insightful profiles of key people such as David Botstein Eric Lander Francis Collins James Watson Michael Hunkapiller and Craig Venter McElheny also shows that the Human Genome Project is a striking example of how new techniques such as restriction enzymes and sequencing methods often arrive first shaping the questions scientists then ask Drawing on years of original interviews and reporting in the inner circles of biological science Drawing the Map of Life is the definitive up to date story of today s greatest scientific quest No one who wishes to understand genome mapping and how it is transforming our lives can afford to miss this book Quantised Vortices Tapio Simula, 2019-08-05 Vortices comprising swirling motion of matter are

observable in classical systems at all scales ranging from atomic size to the scale of galaxies In quantum mechanical systems such vortices are robust entities whose behaviours are governed by the strict rules of topology The physics of quantum vortices is pivotal to basic science of quantum turbulence and high temperature superconductors and underpins emerging quantum technologies including topological quantum computation This handbook is aimed at providing a dictionary style portal to the fascinating quantum world of vortices **Introduction to Elementary Particle Physics** Alessandro Bettini,2024-06-30 This Open Access third edition reflects the progress of field as a first course in particle physics for undergraduate students Landmark Papers in Neurology Martin R. Turner, Matthew C. Kiernan, 2015-08-20 Current understanding of neurological disease has been evolving over the past 150 years With the increasing and earlier sub specialization of neurology trainees and their variable exposure to higher academic study there is little opportunity to put this development into a historical context as a whole Understanding the evidence base or appreciating the lack of it in some cases is an important part of training but this is rarely presented in a palatable entertaining form Part of the Landmark Papers in series this book brings together the ten most important papers for each sub speciality within neurology covering the full range of major neurological conditions Papers have been selected by leading international experts who not only summarize what each paper showed but place them into a wider context that makes a coherent story of how their sub **Acetylene and Its Polymers** Seth C. Rasmussen, 2018-07-21 This Brief presents for the first speciality has developed time a detailed historical overview of the development of acetylene polymers beginning with the initial discovery of acetylene in 1836 and continuing up through the 2000 Nobel Prize in Chemistry The polymerization of acetylene is most commonly associated with polyacetylene which was found to be conductive when treated with oxidizing agents such as Br2 or I2 in the mid to late 1970s In fact under the right conditions oxidized polyacetylenes can exhibit conductivities into the metallic regime thus providing the first example of an organic polymer exhibiting metallic conductivity As a consequence the 2000 Nobel Prize in Chemistry was awarded to Hideki Shirakawa Alan MacDiarmid and Alan Heeger for this pioneering research the award citation reading for the discovery and development of electrically conductive polymers Because of this most incorrectly view polyacetylene as well as conducting polymers in general to originate in the 1970s In this work the author examines the polymerization of acetylene from early thermal polymerization studies to the ultimate production of the fully conjugated polyacetylene Although true polyacetylene was not successfully produced until the 1950s by Giulio Natta the polymerization of acetylene dates back to 1866 with the work of Marcellin Berthelot These initial efforts were continued by a range of scientists to produce a polymeric material collectively given the name cuprene in 1900 by Paul Sabatier Between the initial cuprene studies and the production of true polyacetylene two related materials were also studied usually referred to as polyenes and polyvinylenes Although both of these materials could be thought of as forms of polyacetylene neither was actually generated from the direct polymerization of acetylene Readers will gain insight into the fact that polyacetylene and

Bennetzen, Sarah C. Hake, 2009-01-16 Maize is one of the world's highest value crops with a multibillion dollar annual contribution to agriculture The great adaptability and high yields available for maize as a food feed and forage crop have led to its current production on over 140 million hectares worldwide with acreage continuing to grow at the expense of other crops In terms of tons of cereal grain produced worldwide maize has been number one for many years Moreover maize is expanding its contribution to non food uses including as a major source of ethanol as a fuel additive or fuel alternative in the US In addition maize has been at the center of the transgenic plant controversy serving as the first food crop with released transgenic varieties By 2008 maize will have its genome sequence released providing the sequence of the first average size plant genome the four plant genomes that are now sequenced come from unusually tiny genomes and of the most complex genome sequenced from any organism Among plant science researchers maize has the second largest and most productive research community trailing only the Arabidopsis community in scale and significance At the applied research and commercial improvement levels maize has no peers in agriculture and consists of thousands of contributors worthwhile A
