Gref, 2010 He contrasts the commonly held perception that the pace of technology is accelerating with the historical record He highlights the people and the organizations which are responsible for America's technological largesse The book follows the money to uncover the underlying trends The beginning of a decline in technology development is detected using indirect indicators for clues Impacts on the formation of companies employment and productivity provide sobering reasons to enlighten others and demand a change in course After considering the possibilities the book proposes several constructive actions which avoid the proverbial tendency to throw more money at the problem The goal of the book is to provoke discussion and promote action

where appropriate Americans standard of living is at stake Tech savvy readers will want to understand this issue so as to influence others Long range thinkers will want to factor these considerations into their prognostications The titans of the technology based companies can develop new and improved strategies based on the findings of this book And our elected officials may want to act before a catastrophic disaster confronts the nation This book will strike a chord with everyone who is interested in America s future economic health Specific audience groups include scientists engineers entrepreneurs employees in technology based companies government and corporate policymakers deciding the future of research and development R D programs government workers involved in the execution of government R D programs and those thinking about a career in R D It is complementary to such works as Politics and Economics in America The Way We Came to Be by Richard E Carmichael Krieger Publishing Company 1998 which explores political and economic history in order to explain the emergence of the United States world economic dominance Carmichael s book makes recommendations on how government could assist America s businesses in maintaining our economic leadership but it does not address any aspects of technology development and associated issues Closing the Innovation Gap by Judy Estrin McGraw Hill 2009 provides business leaders with concepts for leading their organizations so as to close the innovation gap with competitors It focuses on the innovation environment within the organization whereas Dr Gref addresses the complete technology development cycle its financing America s rise to global dominance and the specter of a national decline

*Meeting the Demands of Reason* Jay Bergman, 2011-03-15 The Soviet physicist dissident and human rights activist Andrei Sakharov 1921 1989 was awarded the Nobel Peace Prize in 1975 The first Russian to have been so recognized Sakharov in his Nobel lecture held that humanity had a sacred endeavor to create a life worthy of its potential that we must make good the demands of reason by confronting the dangers threatening the world both then and now nuclear annihilation famine pollution and the denial of human rights *Meeting the Demands of Reason* provides a comprehensive account of Sakharov s life and intellectual development focusing on his political thought and the effect his ideas had on Soviet society Jay Bergman places Sakharov s dissidence squarely within the ethical legacy of the nineteenth century Russian intelligentsia inculcated by his father and other family members from an early age In 1948 one year after receiving his doctoral candidate s degree in physics Sakharov began work on the Soviet hydrogen bomb and later received both the Stalin and the Lenin prizes for his efforts Although as a nuclear physicist he had firsthand experience of honors and privileges inaccessible to ordinary citizens Sakharov became critical of certain policies of the Soviet government in the late 1950s He never renounced his work on nuclear weaponry but eventually grew concerned about the environmental consequences of testing and feared unrestrained nuclear proliferation Bergman shows that these issues led Sakharov to see the connection between his work in science and his responsibilities to the political life of his country In the late 1960s Sakharov began to condemn the Soviet system as a whole in the name of universal human rights By the 1970s he had become with Alexander Solzhenitsyn the most recognized Soviet dissident in the

West which afforded him a measure of protection from the authorities In 1980 however he was exiled to the closed city of Gorky for protesting the Soviet invasion of Afghanistan In 1986 the new Gorbachev regime allowed him to return to Moscow where he played a central role as both supporter and critic in the years of perestroika Two years after Sakharov's death the Soviet Union collapsed and in the courageous example of his unyielding commitment to human rights skillfully recounted by Bergman Sakharov remains an enduring inspiration for all those who would tell truth to power

**The Tangled Field** Nathaniel C. COMFORT, Nathaniel C Comfort, 2009-06-30 This biographical study illuminates one of the most important yet misunderstood figures in the history of science Barbara McClintock 1902-1992 a geneticist who integrated classical genetics with microscopic observations of the behavior of chromosomes was regarded as a genius and as an unorthodox nearly incomprehensible thinker In 1946 she discovered mobile genetic elements which she called controlling elements Thirty seven years later she won a Nobel Prize for this work becoming the third woman to receive an unshared Nobel in science Since then McClintock has become an emblem of

feminine scientific thinking and the tragedy of narrow mindedness and bias in science Using McClintock s research notes newly available correspondence and dozens of interviews with McClintock and others Comfort argues that McClintock s work was neither ignored in the 1950s nor wholly accepted two decades later Nor was McClintock marginalized by scientists throughout the decades of her alleged rejection she remained a distinguished figure in her field Comfort replaces the McClintock myth with a new story rich with implications for our understanding of women in science and scientific creativity

**American Scientists** Charles W. Carey,2014-05-14 Profiles more than 200 American men and women who made significant contributions to science during the twentieth century Buried Glory Istvan Hargittai,2013-09-19 Moscow s Novodevichy Cemetery is the final resting place of some of Russia s most celebrated figures from Khrushchev and Yeltsin to Anton Chekhov Sergei Eisenstein Nikolai Gogol and Mikhail Bulgakov Using this famed cemetery as symbolic starting point Buried Glory profiles a dozen eminent Soviet scientists nine of whom are buried at Novodevichy men who illustrate both the glorious heights of Soviet research as well as the eclipse of science since the collapse of the USSR Drawing on extensive archival research and his own personal memories renowned chemist Istvan Hargittai bring these figures back to life placing their remarkable scientific achievements against the tense political backdrop of the Cold War Among the eminent scientists profiled here are Petr L Kapitza one of the most brilliant representatives of the great generation of Soviet physicists a Nobel Prize winner who risked his career and his life standing up for fellow scientists against Stalin Yulii B Khariton who ran the highly secretive Soviet nuclear weapons laboratory Arzamas 16 despite being Jewish and despite the fact that his father Boris had been sent to the labor camps And Andrei D Sakharov the father of the Soviet hydrogen bomb and a brilliant fighter for human rights for which he won the Nobel Peace Prize Along the way Hargittai shines a light on the harrowing conditions under which these brilliant researchers excelled Indeed in the post war period Stalin s anti Semitism and ongoing anti science measures devastated biology damaged chemistry and nearly destroyed physics The latter was saved only because Stalin realized that without physics and physicists there could be no nuclear weapons The extraordinary scientific talent nurtured by the Soviet regime belongs almost entirely to the past Buried Glory is both a fitting tribute to these great scientists and a fascinating account of scientific work behind the Iron Curtain **Bibliography of the History of**

Weeramantry,2021-10-11 Several years ago when this work first appeared it had become apparent that scientists who play such a key role in the nuclear enterprise needed to be alerted to the many questions of conscience and legality that were inextricably interlinked with their work These questions lay at the heart of the nuclear weapons problem for whatever the political and military leaders might ordain the manufacture of such weapons was a plain impossibility without the active assistance of the scientific profession Yet no substantive work on this topic had until then been attempted Such a work appeared at that time to be an urgent and important need If the problem was then acute and serious it is even more so now The power of nuclear science has grown and with it has grown the power of the individual scientist to initiate new developments The changes in the world order that have occurred in the intervening years enable individual scientists to hold themselves out as available for employment Those who seek their expertise may include not only governments but other entities as well The power of global destruction that these scientists command renders it imperative that they be alerted on a continuing basis to the problems of conscience that arise Hence the need for a re issue of this work for which there had been many requests from concerned scientists professional groups socially concerned organisations and also from lawyers The book is re issued in its original form but updated by the inclusion of more recent work as contained in extracts from three judicial opinions upon the matter      **Year Book** ,1982      **Current Catalog** National Library of Medicine (U.S.),1982 First multi year cumulation covers six years 1965 70
