Munsey, 1899      **The Seven Deadly Sins of Psychology** Chris Chambers, 2017-04-25 Why psychology is in peril as a scientific discipline and how to save it Psychological science has made extraordinary discoveries about the human mind but can we trust everything its practitioners are telling us In recent years it has become increasingly apparent that a lot of

research in psychology is based on weak evidence questionable practices and sometimes even fraud The Seven Deadly Sins of Psychology diagnoses the ills besetting the discipline today and proposes sensible practical solutions to ensure that it remains a legitimate and reliable science in the years ahead In this unflinchingly candid manifesto Chris Chambers draws on his own experiences as a working scientist to reveal a dark side to psychology that few of us ever see Using the seven deadly sins as a metaphor he shows how practitioners are vulnerable to powerful biases that undercut the scientific method how they routinely torture data until it produces outcomes that can be published in prestigious journals and how studies are much less reliable than advertised He reveals how a culture of secrecy denies the public and other researchers access to the results of psychology experiments how fraudulent academics can operate with impunity and how an obsession with bean counting creates perverse incentives for academics Left unchecked these problems threaten the very future of psychology as a science but help is here Outlining a core set of best practices that can be applied across the sciences Chambers demonstrates how all these sins can be corrected by embracing open science an emerging philosophy that seeks to make research and its outcomes as transparent as possible
