Proceedings of the EAA Joint Symposium on Auralization and Ambisonics 2014 Weinzierl, Stefan , Vorländer, Michael , Zotter, Franz, Maempel, Hans-Joachim , Lindau, Alexander ,2014 In consideration of the remarkable intensity of research in the field of Virtual Acoustics including different areas such as sound field analysis and synthesis spatial audio technologies and room acoustical modeling and auralization it seemed about time to organize a second international symposium following the model of the first EAA Auralization Symposium initiated in 2009 by the acoustics group of the former Helsinki University of Technology now Aalto University Additionally research communities which are focused on different approaches to sound field synthesis such as Ambisonics or Wave Field Synthesis have in the meantime moved closer together by using increasingly consistent theoretical frameworks Finally the quality of virtual acoustic environments is often considered as a result of all processing stages mentioned above increasing the need for discussions on consistent strategies for evaluation Thus it seemed appropriate to integrate two of the most relevant communities i e to combine the 2nd International Auralization Symposium with the 5th International Symposium on Ambisonics and Spherical Acoustics The Symposia on Ambisonics initiated in 2009 by the Institute of Electronic Music and Acoustics of the University of Music and Performing Arts in Graz were traditionally dedicated to problems of spherical sound field analysis and re synthesis strategies

for the exchange of ambisonics encoded audio material and more than other conferences in this area the artistic application of spatial audio systems This publication contains the official conference proceedings It includes 29 manuscripts which have passed a 3 stage peer review with a board of about 70 international reviewers involved in the process Each contribution has already been published individually with a unique DOI on the DepositOnce digital repository of TU Berlin Some conference contributions have been recommended for resubmission to Acta Acustica united with Acustica to possibly appear in a Special Issue on Virtual Acoustics in late 2014 These are not published in this collection

Asset Condition, Information Systems and Decision Models Joe E.

Amadi-Echendu, Kerry Brown, Roger Willett, Joseph Mathew, 2012-11-05 Asset Condition Information Systems and Decision Models is the second volume of the Engineering Asset Management Review Series The manuscripts provide examples of implementations of asset information systems as well as some practical applications of condition data for diagnostics and prognostics The increasing trend is towards prognostics rather than diagnostics hence the need for assessment and decision models that promote the conversion of condition data into prognostic information to improve life cycle planning for engineered assets The research papers included here serve to support the on going development of Condition Monitoring standards This volume comprises selected papers from the 1st 2nd and 3rd World Congresses on Engineering Asset

Management which were convened under the auspices of ISEAM in collaboration with a number of organisations including CIEAM Australia Asset Management Council Australia BINDT UK and Chinese Academy of Sciences Beijing University of Chemical Technology China Asset Condition Information Systems and Decision Models will be of particular interest to finance maintenance and operations personnel whose roles directly affect the capability value of engineering asset base as well as asset managers in both industry and government

Urban Sound Environment Jian Kang, 2006-09-13 Over the past two decades there have been many major new developments in the field of urban sound environment Jian Kang introduces and examines these key developments including the development of prediction methods for urban sound propagation establishment and application of noise mapping software new noise control measures and design methods Also

Aeroacoustic Measurements Thomas J. Mueller, 2013-11-27 During the past three decades there has been a growing concern over the increase in noise pollution that comes as a direct result of the increased volume of automobile traffic high speed trains and larger aircraft Additional sources of noise are commonly found in air handling equipment such as fans and propellers and a variety of machinery used in construction and manufacturing A vast majority of these noise sources are the result of a given system's aeroacoustic response or sound generated by the interaction of a flow field with the given structure While barriers are commonly used to shield communities from highway and train noise and absorption materials are used to shield machinery noise there is no way to shield communities near major airports from the noise generated by low flying aircraft Tens of millions of people worldwide are affected by this airport noise problem In densely populated Europe up to 15 % of the total population is strongly influenced by airport noise Since the volume of air traffic will continue to grow so too will the problem and the number of people involved It is not surprising that many countries and communities have taken legal action to preserve the quality of life in these areas As a result the airlines airports manufacturers and governments are working together to set new standards for aircraft noise reduction In order to establish realistic goals the generation and propagation of acoustic sources must be better understood
