Non Radiometric Assays Technology App:

Non-radiometric Assays Barry D. Albertson, 1988 **Endocrine Methods** Bozzano G Luisa, 1996-03-11 Endocrine Methods contains descriptions of contemporary and cutting edge methodologies in various areas of endocrinology including receptor theory and immunologic techniques for endocrine research The book presents step by step procedures easily available to study the endocrine system and includes experts in their respective fields as contributors The book presents step by step procedures for many important areas of endocrine target organs Endocrine Methods serves as a valuable methodological resource for investigators using endocrine methods Includes comprehensive yet rapid methodical procedures Offers a wide spectrum of assays including both in vivo and in vitro systems important to the several areas of hormone research Describes several techniques for studying receptors examining osteoblast activity and measuring parathyroid hormones Encompasses a host of important research tools that can be utilized by the toxicologist and other biomedical scientists *Biotechnology: Bridging Research and Applications* Daphne Kamely, A.M. Chakrabarty, Steven E. Kornguth, 2012-12-06 Biotechnology is advancing at a rapid pace with numerous applications in medicine industry agriculture and environmental remediation Recognizing this government industrial and academic research and development investment in biotechnology has expanded rapidly The past decade has seen the emergence of applications of this technology with a dual use potential Military applications focus on four major areas biomedical technology such as vaccine development and medical diagnostics detection of toxins chemicals and pathogens material biotechnology and biological decontamination including biodegradation and bioremediation This conference emphasizes the non medical applications of biotechnology The first two sessions focus on the synthesis and properties of molecules that may be used in detectors The traditional approach to detection of chemical and biological agents relied on the development of specific assays or analyses for known agents Advances in molecular biology have made possible the production of large quantities of toxins which were previously available in minute quantities and the molecular engineering of toxins and pathogens with specific pharmacologic and physical chemical properties In addition to the traditional approaches to detection of specific known compounds biotechnology now offers generic approaches to detection Physiological targets known as receptors are primary targets for many drugs and toxins Similarly pathogens rely on receptors to gain access to cells These receptors function as sensitive detectors generating signals which are transduced and amplified **Conservation Technology** Serge A. Wich, Alex K. Piel, 2021-08-31 The global loss of biodiversity is occurring at an unprecedented pace Despite the considerable effort devoted to conservation science and management we still lack even the most basic data on the distribution and density of the majority of plant and animal species which in turn hampers our efforts to study changes over time In addition we often lack behavioural data from the very animals most influenced by environmental changes this is largely due to the financial and logistical limitations associated with gathering scientific data on species that are cryptic widely distributed range over large

areas or negatively influenced by human presence To overcome these limitations conservationists are increasingly employing technology to facilitate such data collection Innovative solutions have been driven by dramatic advances in the conservation technology interface The use of camera traps acoustic sensors satellite data drones and computer algorithms to analyse the large datasets collected are all becoming increasingly widespread Although specialist books are available on some of these individual technologies this is the first comprehensive text to describe the breadth of available technology for conservation and to evaluate its varied applications bringing together a team of international experts using a diverse range of approaches Conservation Technology is suitable for graduate level students professional researchers practitioners and field managers in the fields of ecology and conservation biology
