Distributed Constraint Logic Programming Ho-Fung Leung,1993 This book presents the first attempt to combine concurrent logic programming and constraint logic programming It is divided into three parts In the first part a novel computation model called the multi Pandora model which is designed on the basis of the Pandora model is presented In the second part the distributed implementation schemes for Parlog Pandora and multi Pandora are presented Finally the author presents the distributed constraint solvers for finite domain constraints as well as the distributed constraint solvers in the domains of real numbers and Boolean rings which can be incorporated into the schemes presented in the second part to handle the ask and tell constraints

forth **Mathematical Logic for Computer Science** Zhongwan Lu,1998 Mathematical logic is essentially related to computer science This book describes the aspects of mathematical logic that are closely related to each other including classical logic constructive logic and modal logic This book is intended to attend to both the peculiarities of logical systems and the requirements of computer science In this edition the revisions essentially involve rewriting the proofs increasing the explanations and adopting new terms and notations Mathematical Logic For Computer Science (2nd Edition) Zhongwan Lu,1998-08-22 Mathematical logic is essentially related to computer science This book describes the aspects of mathematical logic that are closely related to each other including classical logic constructive logic and modal logic This book is intended to attend to both the peculiarities of logical systems and the requirements of computer science In this edition the revisions essentially involve rewriting the proofs increasing the explanations and adopting new terms and notations **RLISP '88: An Evolutionary Approach To Program Design And Reuse** J Marti,1993-09-21 The RLISP 88 programming system introduces an evolutionary approach to software development that enables small groups of programmers to advance the state of the art over a period of many years Each new system is built on top of the old yet like an Irishman s hammer little remains of the original program code This book presents a style of durable programming for domain specialists and computer scientists alike Exercises at the end of each chapter encourage its use as a textbook **Stochastic Complexity In Statistical Inquiry** Jorma Rissanen,1998-10-07 This book describes how model selection and statistical inference can be founded on the shortest code length for the observed data called the stochastic complexity This generalization of the algorithmic complexity not only offers an objective view of statistics where no prejudiced assumptions of true data generating distributions are needed but it also in one stroke leads to calculable expressions in a range of situations of practical interest and links very closely with mainstream statistical theory The search for the smallest stochastic complexity extends the classical maximum likelihood technique to a new global one in which models can be compared regardless of their numbers of parameters The result is a natural and far reaching extension of the traditional theory of estimation where the Fisher information is replaced by the stochastic complexity and the Cramer Rao inequality by an extension of the Shannon Kullback inequality Ideas are illustrated with applications from parametric and non parametric regression density and spectrum estimation time series hypothesis testing contingency tables and data compression *Cooperation in Industrial Multi-agent Systems* Nick Jennings,1994 Assuming no prior knowledge of Distributed Artificial Intelligence DAI this book deals with the complete development lifecycle of multi agent systems for industrial applications New Approaches to Knowledge Acquisition Ruqian Lu,1994 It is well recognized that knowledge acquisition is the critical bottleneck of knowledge engineering This book presents three major approaches of current research in this field namely the psychological approach the artificial intelligence approach and the software engineering approach Special attention is paid to the most recent advances in knowledge acquisition research especially those made by Chinese computer scientists A special chapter is

devoted to its applications in other fields e g language analysis software engineering computer aided instruction etc which were done in China

**Cooperation In Industrial Multi-agent Systems** Nicholas R Jennings,1994-03-07 Distributed Artificial Intelligence DAI is a vibrant sub field of Artificial Intelligence concerned with coordinating the knowledge and actions of multiple interacting agents Although DAI has the potential to overcome many of the problems currently associated with constructing software systems which are large complex and knowledge rich there have as yet been relatively few attempts to apply it to real world applications To help pave the way for such future developments this book recounts the insights gained and the breakthroughs made whilst building multiple agent systems in the domains of electricity transportation management and control of a particle accelerator These experiences cover the complete development lifecycle of multi agent systems for industrial applications ranging from the initial design through the implementation to the testing and evaluation phases The book s other main features are that it provides a thorough and up to date explanation of the foundation concepts of DAI describes a new paradigm for building multi agent systems which uses the concept of reusable cooperation knowledge and develops a new model of cooperation based on the notion of joint intentions

**Conclog: A Methodological Approach to Concurrent Logic Programming** Jean-Marie Jacquet, 1991-11-27 This book presents a new concurrent logic programming language called Conclog and a methodology for programming in it Conclog was designed by taking the ideal features of logic programming as reference rather than by concentrating directly on operational tricks to ensure efficiency This leads to quite easy declarative programming Concern for soundness and completeness ensures that multi directional and multi solution correct procedures can be coded quite straightforwardly Assuming suitable hypotheses on their uses they can be transformed into very efficient versions thanks to the introduction of appropriate control information Correctness preserving properties are given for that purpose The design of Conclog involves

three steps First a sound and complete parallel execution model of Horn clause programs is proposed which reduces subgoals of conjunctions independently and uses a calculus for reconciling inconsistent bindings Second this is extended to handle negation as completely as possible Third a minimal and reasonably complete set of extra logical features are defined for optimization and practical purposes The second part of the book presents a methodology for constructing Conclog in a rigorous way This covers the entire programming process from informal specifications via logic descriptions to efficient programs The methodology can be adapted to other languages
