Nonlinear Difference Equations Theory With Applications To Social Science Models:

Nonlinear Difference Equations H. Sedaghat,2003-01-31 This book presents a rare mix of the latest mathematical theory and procedures in the area of nonlinear difference equations and discrete dynamical systems together with applications of this theory to models in economics and other social sciences The theoretical results include not only familiar topics on chaos bifurcation stability and instability of cycles and equilibria but also some recently published and some as yet unpublished results on these and related topics e g the theory of semiconjugates In addition to rigorous mathematical analysis the book discusses several social science models and analyzes some of them in substantial detail This book is of potential interest to professionals and graduate students in mathematics and applied mathematics as well as researchers in social sciences with an interest in the latest theoretical results pertaining to discrete deterministic dynamical systems

Nonlinear Difference Equations H. Sedaghat,2013-03-14 It is generally acknowledged that deterministic formulations of dy namical phenomena in the social sciences need to be treated differently from similar formulations in the natural sciences Social science phe nomena typically defy precise measurements or data collection that are comparable in accuracy and detail to those in the natural sciences Con sequently a deterministic model is rarely expected to yield a precise description of the actual phenomenon being modelled Nevertheless as may be inferred from a study of the models discussed in this book the qualitative analysis of deterministic models has an important role to play in understanding the fundamental mechanisms behind social sci ence phenomena The reach of such analysis extends far beyond tech nical clarifications of classical theories that were generally expressed in imprecise literary prose The inherent lack of precise knowledge in the social sciences is a fun damental trait that must be distinguished from uncertainty For in stance in mathematically modelling the stock market uncertainty is a prime and indispensable component of a model Indeed in the stock market the rules are specifically designed to make prediction impossible or at least very difficult On the other hand understanding concepts such as the business cycle involves economic and social mechanisms that are very different from the rules of the stock market Here far from seeking unpredictability the intention of the modeller is a scientific one i e **Nonlinear Difference Equations** H. Sedaghat,2014-01-15 *Geometric Theory of Discrete Nonautonomous Dynamical Systems* Christian Pötzsche,2010-08-24 Nonautonomous dynamical systems provide a mathematical framework for temporally changing phenomena where the law of evolution varies in time due to seasonal modulation controlling or even random effects Our goal is to provide an approach to the corresponding geometric theory of nonautonomous discrete dynamical systems in infinite dimensional spaces by virtue of 2 parameter semigroups processes These dynamical systems are generated by implicit difference equations which explicitly depend on time Compactness and dissipativity conditions are provided for such problems in order to have attractors using the natural concept of pullback convergence Concerning a necessary linear theory our hyperbolicity concept is based on exponential dichotomies and splittings This concept is in turn used to construct nonautonomous invariant manifolds so called

fiber bundles and deduce linearization theorems The results are illustrated using temporal and full discretizations of evolutionary differential equations   *Dynamics of Third-Order Rational Difference Equations with Open Problems and Conjectures* Elias Camouzis,G. Periodicities in Nonlinear Difference Equations E.A. Grove,G. Ladas,2004-12-16 Sharkovsky s Theorem Li and Yorke s period three implies chaos result and the 3x 1 conjecture are beautiful and deep results that demonstrate the rich periodic character of first order nonlinear difference equations To date however we still know surprisingly little about higher order nonlinear difference equations During the last ten years the authors of this book have been fascinated with discovering periodicities in equations of higher order which for certain values of their parameters have one of the following characteristics 1 Every solution of the equation is periodic with the same period 2 Every solution of the equation is eventually periodic with a prescribed period 3 Every solution of the equation converges to a periodic solution with the same period This monograph presents their findings along with some thought provoking questions and many open problems and conjectures worthy of investigation The authors also propose investigation of the global character of solutions of these equations for other values of their parameters and working toward a more complete picture of the global behavior of their solutions With the results and discussions it presents Periodicities in Nonlinear Difference Equations places a few more stones in the foundation of the basic theory of nonlinear difference equations Researchers and graduate students working in difference equations and discrete dynamical systems will find much to intrigue them and inspire further work in this area Economic and Financial Challenges for Eastern Europe Nicos Sykianakis,Persefoni Polychronidou,Anastasios Karasavvoglou,2019-07-11 The papers in this proceedings volume were presented at the 9th international conference The Economies of the Balkan and Eastern European Countries in the Changing World EBEEC held in Athens Greece in April 2017 They include the scientific results of research on current issues relevant for the wider area of Eastern Europe Authors from 30 different countries develop new ideas covering topics such as international economies European integration the economic crisis macroeconomics banking stock markets education energy innovation and marketing The contributions also examine the role of the economies of the Balkan and Eastern European countries in a pan European context *Proceedings of the Sixth International Conference on Difference Equations Augsburg, Germany 2001* Bernd Aulbach,Saber N. research experience the majority of examples involve equations in finite dimensional Euclidean spaces The book first introduces difference equations on groups building a foundation for later chapters and illustrating the wide variety of possible formulations and interpretations of difference equations that occur in concrete contexts The author then proposes a systematic method of decomposition for recursive difference equations that uses a semiconjugate relation between maps Focusing on large classes of difference equations he shows how to find the semiconjugate relations and accompanying factorizations of two difference equations with strictly lower orders The final chapter goes beyond semiconjugacy by extending the fundamental ideas based on form symmetries to nonrecursive difference equations With numerous examples and exercises this book is an ideal introduction to an exciting new domain in the area of difference equations It takes a fresh and all inclusive look at difference equations and develops a systematic procedure for examining how these equations are constructed and solved *An Introduction to Difference Equations* Saber Elaydi,2005-03-29 A must read for mathematicians scientists and engineers who want to understand difference equations and discrete dynamics Contains the most complete and comprehenive analysis of the stability of one dimensional maps or first order difference equations Has an extensive number of applications in a variety of fields from neural network to host parasitoid systems Includes chapters on continued fractions orthogonal polynomials and asymptotics Lucid and transparent writing style **Advances in Discrete Dynamical Systems, Difference Equations and Applications** Saber Elaydi,Mustafa R.
