Nonlinear Parabolic Equations and Hyperbolic-Parabolic Coupled Systems Songmu Zheng,2020-05-05 This monograph is devoted to the global existence uniqueness and asymptotic behaviour of smooth solutions to both initial value problems and initial boundary value problems for nonlinear parabolic equations and hyperbolic parabolic coupled systems Most of the material is based on recent research carried out by the author and his collaborators The book can be divided into two parts In the first part the results on decay of solutions to nonlinear parabolic equations and hyperbolic parabolic coupled systems are obtained and a chapter is devoted to the global existence of small smooth solutions to fully nonlinear parabolic equations and quasilinear hyperbolic parabolic coupled systems Applications of the results to nonlinear thermoelasticity and fluid dynamics are also shown Some nonlinear parabolic equations and coupled systems arising from the study of phase transitions are investigated in the second part of the book The global existence uniqueness and asymptotic behaviour of smooth solutions with arbitrary initial data are obtained The final chapter is further devoted to related topics multiplicity of equilibria and the existence of a global attractor inertial manifold and inertial set A knowledge of partial differential equations and Sobolev spaces is assumed As an aid to the reader the related concepts and results are collected and the relevant references given in the first chapter The work will be of interest to researchers and graduate students in pure and applied mathematics mathematical physics and applied sciences

Recent Advances in Nonlinear Elliptic and Parabolic Problems Philippe B nilan,1989 This volume collects most of the lectures and communications presented to the International Conference which took place in Nancy in March 1988 The main issues addressed were nonlinear elliptic equations and systems parabolic equations time dependent systems and the calculus of variations

Regularity Estimates for Nonlinear Elliptic and Parabolic Problems John Lewis,2012-03-02 The issue of regularity has played a central role in the theory of Partial Differential Equations almost since its inception and despite the tremendous advances made it still remains a very fruitful research field In particular considerable strides have been made in regularity estimates for degenerate and singular elliptic and parabolic equations over the last several years and in many unexpected and challenging directions Because of all these recent results it seemed high time to create an overview that would highlight emerging trends and issues in this fascinating research topic in a proper and effective way The course aimed to show the deep connections between these topics and to

open new research directions through the contributions of leading experts in all of these fields *Differential Equations* O.A. Oleinik, 2019-08-16 Part II of the Selected Works of Ivan Georgievich Petrowsky contains his major papers on second order Partial differential equations systems of ordinary Differential equations the theory of Probability the theory of functions and the calculus of variations Many of the articles contained in this book have Profoundly influenced the development of modern mathematics Of exceptional value is the article on the equation of diffusion with growing quantity of the substance This work has found extensive application in biology genetics economics and other branches of natural science Also of great importance is Petrowsky s work on a Problem which still remains unsolved that of the number of limit cycles for ordinary differential equations with rational right hand sides **Regularity Theory for Generalized Navier-Stokes Equations** Cholmin Sin, Evgenii S. Baranovskii, 2025-03-17 This book delves into the recent findings and research methods in the existence and regularity theory for Non Newtonian Fluids with Variable Power Law The aim of this book is not only to introduce recent results and research methods in the existence and regularity theory such as higher integrability higher differentiability and Holder continuity for flows of non Newtonian fluids with variable power laws but also to summarize much of the existing literature concerning these topics While this book mainly focuses on steady state flows of non Newtonian fluids the methods and ideas presented in this book can be applied to unsteady flows as discussed in Chapter 7 and other related problems such as complex non Newtonian fluids plasticity elasticity $p \times$ Laplacian type systems and so on The book is intended for researchers and graduate students in the field of mathematical fluid mechanics and partial differential equations with variable exponents It is expected to contribute to the advancement of mathematics and its applications **Handbook of Differential Equations: Stationary Partial Differential Equations** Michel Chipot, Pavol Quittner, 2006-08-08 This handbook is volume III in a series devoted to stationary partial differential equations Similarly as volumes I and II it is a collection of self contained state of the art surveys written by well known experts in the field The topics covered by this handbook include singular and higher order equations problems near critically problems with anisotropic nonlinearities dam problem T convergence and Schauder type estimates These surveys will be useful for both beginners and experts and speed up the progress of corresponding rapidly developing and fascinating areas of mathematics Key features Written by well known experts in the field Self contained volume in series covering one of the most rapid developing topics in mathematics Written by well known experts in the field Self contained volume in series covering one of the most rapid developing topics in mathematics **Nonlinear Partial Differential Equations in Engineering** W. Ladyzhenskaya, 1989 **A Stability Technique for Evolution Partial Differential Equations** Victor A. Galaktionov, Juan Luis Vázquez, 2012-12-06 common feature is that these evolution problems can be formulated as asymptotically small perturbations of certain dynamical systems with better known behaviour Now it usually happens that the

perturbation is small in a very weak sense hence the difficulty or impossibility of applying more classical techniques Though the method originated with the analysis of critical behaviour for evolution PDEs in its abstract formulation it deals with a nonautonomous abstract differential equation $U_t = A u + C u$ where u has values in a Banach space like an LP space A is an autonomous time independent operator and C is an asymptotically small perturbation so that $C u \rightarrow 0$ along orbits $u(t)$ of the evolution in a sense to be made precise which in practice can be quite weak We work in a situation in which the autonomous limit differential equation $U_t = A u$ has a well known asymptotic behaviour and we want to prove that for large times the orbits of the original evolution problem converge to a certain class of limits of the autonomous equation More precisely we want to prove that the orbits of NDE are attracted by a certain limit set of ADE which may consist of equilibria of the autonomous equation or it can be a more complicated object

Sobolev and Viscosity Solutions for Fully Nonlinear Elliptic and Parabolic Equations N. V. Krylov, 2018-09-07 This book concentrates on first boundary value problems for fully nonlinear second order uniformly elliptic and parabolic equations with discontinuous coefficients We look for solutions in Sobolev classes local or global or for viscosity solutions Most of the auxiliary results such as Aleksandrov's elliptic and parabolic estimates the Krylov Safonov and the Evans Krylov theorems are taken from old sources and the main results were obtained in the last few years Presentation of these results is based on a generalization of the Fefferman Stein theorem on Fang Hua Lin's like estimates and on the so called ersatz existence theorems saying that one can slightly modify any equation and get a cut off equation that has solutions with bounded derivatives These theorems allow us to prove the solvability in Sobolev classes for equations that are quite far from the ones which are convex or concave with respect to the Hessians of the unknown functions In studying viscosity solutions these theorems also allow us to deal with classical approximating solutions thus avoiding sometimes heavy constructions from the usual theory of viscosity solutions
