Nonlinear Semigroups, Partial Differential Equations and Attractors Tepper L. Gill,Woodford W. Zachary,2014-01-15 *Nonlinear Semigroups, Partial Differential Equations and Attractors* T.L. Gill,Woodford W. Zachary,2006-11-15 The original idea of the organizers of the Washington Symposium was to span a fairly narrow range of topics on some recent techniques developed for the investigation of nonlinear partial differential equations and discuss these in a forum of experts It soon became clear however that the dynamical systems approach interfaced significantly with many important branches of applied mathematics As a consequence the scope of this resulting proceedings volume is an enlarged one with coverage of a wider range of research topics **Nonlinear Semigroups, Partial Differential Equations and Attractors** T. Zachary, HOWARD UNIV WASHINGTON D C.,1987 This conference will focus on nonlinear partial and integrodifferential equations by considering them as infinite dimensional dynamical systems One day will be devoted to new classes of equations that arise via mathematical modelling of large flexible space structures Some of the topics which will be represented are Nonlinear Semigroups Dynamical Systems Attractors Reduction to Finite Dimensional Systems Inertial Manifolds Bifurcation Theory Control Theory Compensated Compactness Nonlinear Evolution Equations Reaction Diffusion Equationsl and Stability Analysis of PDE s **Nonlinear Dispersive Partial Differential Equations and Inverse Scattering** Peter D. A. Perry,Jean-Claude Saut,Catherine Sulem,2019-11-14 This volume contains lectures and invited papers from the Focus Program on Nonlinear Dispersive Partial Differential Equations and Inverse Scattering held at the Fields Institute from July 31 August 18 2017 The conference brought together researchers in completely integrable systems and PDE with the goal of advancing the understanding of qualitative and long time behavior in dispersive nonlinear equations The program included Percy Deift s Coxeter lectures which appear in this volume together with tutorial lectures given during the first week of the focus program The research papers collected here include new results on the focusing nonlinear Schrödinger NLS equation the massive Thirring model and the Benjamin Bona Mahoney equation as dispersive PDE in one space dimension as well as the Kadomtsev Petviashvili II equation the Zakharov Kuznetsov equation and the Gross Pitaevskii equation as dispersive PDE in two space dimensions The Focus Program coincided with the fiftieth anniversary of the discovery by Gardner Greene Kruskal and Miura that the Korteweg de Vries KdV equation could be integrated by exploiting a remarkable connection between KdV and the spectral theory of Schrödinger s equation in one space dimension This led to the discovery of a number of completely integrable models of dispersive wave propagation including the cubic NLS equation and the derivative NLS equation in one space dimension and the Davey Stewartson Kadomtsev Petviashvili and Novikov Veselov equations in two space dimensions These models have been extensively studied and in some cases the inverse scattering theory has been put on rigorous footing It has been used as a powerful analytical tool to study global well posedness and elucidate asymptotic behavior of the solutions including dispersion soliton resolution and semiclassical limits

[Dimensions, Embeddings, and Attractors](#) James C. Robinson,2010-12-16 This accessible research monograph investigates how finite dimensional sets can be embedded into finite dimensional Euclidean spaces The first part brings together a number of abstract embedding results and provides a unified treatment of four definitions of dimension that arise in disparate fields Lebesgue covering dimension from classical dimension theory Hausdorff dimension from geometric measure theory upper box counting dimension from dynamical systems and Assouad dimension from the theory of metric spaces These abstract embedding results are applied in the second part of the book to the finite dimensional global attractors that arise in certain infinite dimensional dynamical systems deducing practical consequences from the existence of such attractors a version of the Takens time delay embedding theorem valid in spatially extended systems and a result on parametrisation by point values This book will appeal to all researchers with an interest in dimension theory particularly those working in dynamical systems

Dispersive Partial Differential Equations M. Burak Erdoğan,Nikolaos Tzirakis,2016-05-03 The area of nonlinear dispersive partial differential equations PDEs is a fast developing field which has become exceedingly technical in recent years With this book the authors provide a self contained and accessible introduction for graduate or advanced undergraduate students in mathematics engineering and the physical sciences Both classical and modern methods used in the field are described in detail concentrating on the model cases that simplify the presentation without compromising the deep technical aspects of the

theory thus allowing students to learn the material in a short period of time This book is appropriate both for self study by students with a background in analysis and for teaching a semester long introductory graduate course in nonlinear dispersive PDEs Copious exercises are included and applications of the theory are also presented to connect dispersive PDEs with the more general areas of dynamical systems and mathematical physics [Control Methods in PDE-Dynamical Systems](#) Fabio Ancona,2007 While rooted in controlled PDE systems this 2005 AMS IMS SIAM Summer Research Conference sought to reach out to a rather distinct yet scientifically related research community in mathematics interested in PDE based dynamical systems Indeed this community is also involved in the study of dynamical properties and asymptotic long time behavior in particular stability of PDE mixed problems It was the editors conviction that the time had become ripe and the circumstances propitious for these two mathematical communities that of PDE control and optimization theorists and that of dynamical specialists to come together in order to share recent advances and breakthroughs in their respective disciplines This conviction was further buttressed by recent discoveries that certain energy methods initially devised for control theoretic a priori estimates once combined with dynamical systems techniques yield wholly new asymptotic results on well established nonlinear PDE systems particularly hyperb These expectations are now particularly well reflected in the contributions to this volume which involve nonlinear parabolic as well as hyperbolic equations and their attractors aero elasticity elastic systems Euler Korteweg models thin film equations Schrodinger equations beam equations etc in addition the static topics of Helmholtz and Morrey potentials are also prominently featured A special component of the present volume focuses on hyperbolic conservation laws to take advantage of recent theoretical advances with significant implications also on applied problems in all these areas the reader will find state of the art accounts as stimulating starting points for further research [Properties of Global Attractors of Partial Differential Equations](#) Anatolii Vladimirovich Babin,M. Georgiev, Tohru Ozawa, 2019-05-07 This book features a collection of papers devoted to recent results in nonlinear partial differential equations and applications. It presents an excellent source of information on the state of the art new methods and trends in this topic and related areas. Most of the contributors presented their work during the sessions Recent progress in evolution equations and Nonlinear PDEs at the 12th ISAAC congress held in 2017 in Växjö Sweden. Even if inspired by this event this book is not merely a collection of proceedings but a stand alone project gathering original contributions from active researchers on the latest trends in nonlinear evolution PDEs.

Attractors for infinite-dimensional non-autonomous dynamical systems

Alexandre Carvalho, José A. Langa, James Robinson, 2012-09-26 The book treats the theory of attractors for non autonomous dynamical systems. The aim of the book is to give a coherent account of the current state of the theory using the framework of processes to impose the minimum of restrictions on the nature of the non autonomous dependence. The book is intended as an up to date summary of the field but much of it will be accessible to beginning graduate students. Clear indications will be given as to which material is fundamental and which is more advanced so that those new to the area can quickly obtain an overview while those already involved can pursue the topics we cover more deeply.
