Nonlinear Diffusion Research Notes In Mathematics Ser No 14:

Shock Waves and Reaction—Diffusion Equations Joel Smoller, 2012-12-06 the progress of physics will to a large extent depend on the progress of nonlinear mathematics of methods to solve nonlinear equations and therefore we can learn by comparing different nonlinear problems WERNER HEISENBERG I undertook to write this book for two reasons First I wanted to make easily available the basics of both the theory of hyperbolic conservation laws and the theory of systems of reaction diffusion equations including the generalized Morse theory as developed by C Conley These important subjects seem difficult to learn since the results are scattered throughout the research journals 1 Second I feel that there is a need to present the modern methods and ideas in these fields to a wider audience than just mathematicians Thus the book has some rather sophisticated aspects to it as well as certain textbook aspects The latter serve to explain somewhat the reason that a book with the title Shock Waves and Reaction Diffusion Equations has the first nine chapters devoted to linear partial differential equations More precisely I have found from my classroom experience that it is far easier to grasp the subtleties of nonlinear partial differential equations after one has an understanding of the basic notions in the linear theory This book is divided into four main parts linear theory reaction diffusion equations shock wave theory and the Conley index in that order Thus the text begins with a discussion of ill posed problems *Nonlinear PDEs* Guido Schneider, Hannes Uecker, 2017-10-26 This is an introductory textbook about nonlinear dynamics of PDEs with a focus on problems over unbounded domains and modulation equations The presentation is example oriented and new mathematical tools are developed step by step giving insight into some important classes of nonlinear PDEs and nonlinear dynamics phenomena which may occur in PDEs The book consists of four parts Parts I and II are introductions to finite and infinite dimensional dynamics defined by ODEs and by PDEs over bounded domains respectively including the basics of bifurcation and attractor theory Part III introduces PDEs on the real line including the Korteweg de Vries equation the Nonlinear Schrödinger equation and the Ginzburg Landau equation These examples often occur as simplest possible models namely as amplitude or modulation equations for some real world phenomena such as nonlinear waves and pattern formation Part IV explores in more detail the connections between such complicated physical systems and the reduced models For many models a mathematically rigorous justification by approximation results is given The parts of the book are kept as self contained as possible The book is suitable for self study and there are various possibilities to build one or two semester courses from the book Problems in Nonlinear Diffusion Antonio Fasano, Mario Primicerio, 2006-11-14 **Bulletin of the American Mathematical Society**, 1983 **Differential Equations And Applications To Biology And To Industry - Proceedings Of The Claremont International Conference Dedicated To The Memory Of Stavros Busenberg (1941 - 1993)** Kenneth Cooke, Ellis Cumberbatch, Mario Martelli, Betty Tang, Horst Thieme, 1995-12-08 This volume is dedicated to the memory of Professor Stavros Busenberg of Harvey Mudd College who contributed so greatly to this field during 25 years prior to his untimely death It contains about 60

invited papers by leading researchers in the areas of dynamical systems mathematical studies in ecology epidemics and physiology and industrial mathematics Anyone interested in these areas will find much of value in these contributions

Current Research in Nonlinear Analysis Themistocles M. Rassias, 2018-06-18 Current research and applications in nonlinear analysis influenced by Haim Brezis and Louis Nirenberg are presented in this book by leading mathematicians Each contribution aims to broaden reader's understanding of theories methods and techniques utilized to solve significant problems Topics include Sobolev Spaces Maximal monotone operators A theorem of Brezis Nirenberg Operator norm convergence of the Trotter product formula Elliptic operators with infinitely many variables Pseudo and quasiconvexities for nonsmooth function Anisotropic surface measures Eulerian and Lagrangian variables Multiple periodic solutions of Lagrangian systems Porous medium equation Nondiscrete Lasso Revalski principle Graduate students and researchers in mathematics physics engineering and economics will find this book a useful reference for new techniques and research areas Haim Brezis and Louis Nirenberg's fundamental research in nonlinear functional analysis and nonlinear partial differential equations along with their years of teaching and training students have had a notable impact in the field

El-Tantawy, 2024-08-13 Nonlinear problems originating from applied science that is closely related to practices contain rich and extensive content It makes the corresponding nonlinear models also complex and diverse Due to the intricacy and contingency of nonlinear problems unified mathematical methods still remain far and few between In this regard the comprehensive use of symmetric methods along with other mathematical methods becomes an effective option to solve nonlinear problems *Journal of Research of the National Bureau of Standards*, 1971 **Differential and Integral Equations**, 1996

Geometric and Functional Inequalities and Recent Topics in Nonlinear PDEs Emanuel Indrei, Diego Marcon, Levon Nurbekyan, 2023-01-09 This volume contains the proceedings of the virtual conference on Geometric and Functional Inequalities and Recent Topics in Nonlinear PDEs held from February 28 March 1 2021 and hosted by Purdue University West Lafayette IN The mathematical content of this volume is at the intersection of viscosity theory Fourier analysis mass transport theory fractional elliptic theory and geometric analysis The reader will encounter among others the following topics the principal agent problem Maxwell's equations Liouville type theorems for fully nonlinear elliptic equations a doubly monotone flow for constant width bodies and the edge dislocations problem for crystals that describes the equilibrium configurations by a nonlocal fractional Laplacian equation
