Equations And Dynamical Systems - Proceedings Of The Workshop (Needs '91) M. Boiti, Luigi Martina, F.

Pempinelli, 1992-08-26 The Workshop NEEDS 91 brought together from all over the world scientists engaged in research on nonlinear systems either their underlying mathematical properties or their physical applications. Accordingly many talks were devoted to present methods of solution like spectral transform and to the investigation of structural geometrical and/or algebraic properties of continuous and discrete nonlinear evolution equations. Peculiar nonlinear systems such as cellular automata were also discussed. Applications to various fields of physics namely quantum field theory, fluid dynamics, general relativity and plasma physics were considered. *Nonlinear Evolution Equations and Dynamical Systems* V. International Workshop (Needs '92) Vladimir G. Makhankov, O. K. Pashaev, I. Puzynin, 1993-08-13 NEEDS 92 was held in Dubna

Russia in July 1992. This set of proceedings compiles the lectures and short contributions on the soliton theory and its applications presented during the conference. The topics covered included the most recent results on relevant problems of nonlinear evolution systems such as Multidimensional Integrable Systems, Geometric and Algebraic Methods, Painlevé Property, Lie Backlund Symmetries, Spectral Methods, Solitons and Coherent Structures, Computational Methods, Quantum Field and String Theories, Nonlinear Optics and Hydrodynamics, Condensed Matter, etc. The extent of coverage for these important topics makes this book useful, informative and insightful for the mathematics and theoretical physics community, both the senior researchers and those just entering the field. *High-Tc Superconductivity* Aleksandr S. Davydov, Vadim M.

Loktev, 2012-12-06 High T<sub>c</sub> Superconductivity is based on a meeting held in Kiev and contains contributions discussing the most recent achievements in this field. The book includes reviews and original papers covering theoretical and experimental aspects of the subject. Keywords: electronic and magnetic properties, metallization processes, emission and optic spectra, lattice pinning, frustration and fluctuations, thin films. Nuclear Data for Science and Technology Syed M.

Qaim, 2012-12-06 This book describes the Proceedings of the International Conference on Nuclear Data for Science and

Technology held at Jilich in May 1991. The conference was in a series of application-oriented nuclear data conferences organized in the past under the auspices of the Nuclear Energy Agency Nuclear Data Committee NEANDC and with the support of the Nuclear Energy Agency Committee on Reactor Physics NEACRP. It was the first international conference on nuclear data held in Germany with the scientific responsibility entrusted to the Institute of Nuclear Chemistry of the Research Centre Jilich. The scientific programme was established by the International Programme Committee in consultation

with the International Advisers and the NEA and IAEA cooperated in the organization A total of 328 persons from 37 countries and five international organizations participated The scope of these Proceedings extends to a wide range of interdisciplinary topics dealing with measurement calculation evaluation and application of nuclear data with a major emphasis on numerical data Both energy and non energy related applications are considered and due attention is given to some fundamental aspects relevant to the understanding of nuclear data

**Nuclear Physics at the Borderlines** Jose M. Arias, Maria I. Gallardo, Manuel Lozano, 2012-12-06 This volume contains the lectures presented by invited speakers at the IV La Rlibida International Summer School on Nuclear Physics This was the IV edition of a summer school organized by our group every three years on topics related to nuclear physics This Summer School was aimed mainly at young nuclear physicists both theoreticians and experimentalists engaged in research work at predoctoral or recent postdoctoral level The topics treated in the three previous editions of the School were Heavy Ion Collisions Theory of Nuclear Structure and Reactions and Nuclear Astrophysics This year's School was entitled Nuclear Physics at the Borderlines Special emphasis was placed on those topics along which nuclear physics is expected to develop in the next few years The aim of the School was to provide the attendants with an opportunity to get into close contact with experienced researchers and listen to their account of the present state of the art in nuclear physics and the main future lines of development

**Electron-Electron Correlation Effects in Low-Dimensional Conductors and Superconductors** Alexandr A. Ovchinnikov, Ivan I. Ukrainskii, 2012-12-06 Advances in the physics and chemistry of low dimensional systems have been really magnificent in the last few decades Hundreds of quasi one dimensional and quasi two dimensional systems have been synthesized and studied The most popular representatives of quasi one dimensional materials are polyacetylenes CH<sub>1</sub> and conducting donor acceptor molecular crystals TTF z TCNQ Examples of quasi two dimensional systems are high temperature superconductors HTSC based on copper oxides La<sub>2</sub>CuO<sub>4</sub> YBa<sub>2</sub>Cu<sub>3</sub>O<sub>6-y</sub> and organic superconductors based on BEDT TTF molecules The properties of such one and two dimensional materials are not yet fully understood On the one hand the equations of motion of one dimensional systems are rather simple which facilitates rigorous solutions of model problems On the other hand manifestations of various interactions in one dimensional systems are rather peculiar This refers in particular to electron electron and electron phonon interactions Even within the limit of a weak coupling constant electron electron correlations produce an energy gap in the spectrum of one dimensional metals implying a Mott transition from metal to semiconductor state In all these cases perturbation theory is inapplicable Which is one of the main difficulties on the way towards a comprehensive theory of quasi one dimensional systems This meeting held at the Institute for Theoretical Physics in Kiev May 15 18 1990 was devoted to related problems The papers selected for this volume are grouped into three sections

**Solitons and Chaos** Ioannis Antoniou, Franklin J. Lambert, 2012-12-06 Solitons and Chaos is a response to the growing interest in systems exhibiting these two complementary

manifestations of nonlinearity The papers cover a wide range of topics but share common mathematical notions and investigation techniques An introductory note on eight concepts of integrability has been added as a guide for the uninitiated reader Both specialists and graduate students will find this update on the state of the art useful Key points chaos vs integrability solitons theory and applications dissipative systems Hamiltonian systems maps and cascades direct vs inverse methods higher dimensions Lie groups Painleve analysis numerical algorithms perturbation methods      **Signal**

**Transduction in Photoreceptor Cells** Paul A. Hargrave, Klaus P. Hofmann, U. Benjamin Kaupp, 2013-04-09 This book deals with the mechanism of signal transduction in vertebrate and invertebrate photoreceptors It contains contributions on the structure and function of rhodopsin or other G coupled receptors on the regulation of second messengers by enzyme cascade the role of  $Ca^{2+}$  in light adaptation control of ionic channels in photoreceptor cells      **Jack, Hall-Littlewood and**

**Macdonald Polynomials** Vadim B. Kuznetsov, Siddhartha Sahi, 2006 The subject of symmetric functions began with the work of Jacobi Schur Weyl Young and others on the Schur polynomials In the 1950 s and 60 s far reaching generalizations of Schur polynomials were obtained by Hall and Littlewood independently and in a different direction by Jack In the 1980 s Macdonald unified these developments by introducing a family of polynomials associated with arbitrary root systems The last twenty years have witnessed considerable progress in this area revealing new and profound connections with representation theory algebraic geometry combinatorics special functions classical analysis and mathematical physics All these fields and more are represented in this volume which contains the proceedings of a conference on Jack Hall Littlewood and Macdonald polynomials held at ICMS Edinburgh during September 23-26 2003 of historical material including brief biographies of Hall Littlewood Jack and Macdonald the original papers of Littlewood and Jack notes on Hall's work by Macdonald and a recently discovered unpublished manuscript by Jack annotated by Macdonald The book will be invaluable to students and researchers who wish to learn about this beautiful and exciting subject      **Nonlinear Evolution Equations and Dynamical Systems**

Sandra Carillo, Orlando Ragnisco, 2012-12-06 Nonlinear Evolution Equations and Dynamical Systems NEEDS provides a presentation of the state of the art Except for a few review papers the 40 contributions are intentionally brief to give only the gist of the methods proofs etc including references to the relevant literature This gives a handy overview of current research activities Hence the book should be equally useful to the senior researcher as well as the colleague just entering the field Key points treated are i integrable systems in multidimensions and associated phenomenology ii criteria and tests of integrability e g Painlevé test iii new developments related to the scattering transform iv algebraic approaches to integrable systems and Hamiltonian theory e g connections with Young Baxter equations and Kac-Moody algebras v new developments in mappings and cellular automata vi applications to general relativity condensed matter physics and oceanography
