Nonlinear Models Of Interacting Populati:

Nonlinear Models of Interacting Populations N Goel,2012-12-02 On the Volterra and Other Nonlinear Models of Interacting Populations explores the various models brought upon to investigate the different assemblies known to man Assemblies include populations of various biological species countries and political parties among others Because there are numerous assemblies to be measured and evaluated it has been decided that a standard model be used to ascertain a detailed investigation One of the models that have been brought forward is introduced by Volterra which started as a basis for ecological processes The book begins by establishing that Volterra s model is one of the simplest nonlinear competition models It explores the model through the study of the population growth of a species It also covers other theories and concepts relating to the Volterra model in the context of the study These include equilibrium theory diversity and stability in ecological systems and time lags in population among others The book is a helpful reference for students researchers scientists policymakers and other parties in search of model s that fully investigate different assemblies *On the Volterra and Other Nonlinear Models of Interacting Populations Nonlinear Models in Interacting Populations* N. Stochastic Models in Biology Narendra S. Goel,Nira Richter-Dyn,2013-10-22 Stochastic Models in Biology describes the usefulness of the theory of stochastic process in studying biological phenomena The book describes analysis of biological systems and experiments though probabilistic models rather than deterministic methods The text reviews the mathematical analyses for modeling different biological systems such as the random processes continuous in time and discrete in state space The book also discusses population growth and extinction through Malthus law and the work of MacArthur and Wilson The text then explains the dynamics of a population of interacting species The book also addresses population genetics under systematic evolutionary pressures known as deterministic equations and genetic changes in a finite population known as stochastic equations The text then turns to stochastic modeling of biological systems at the molecular level particularly the kinetics of biochemical reactions The book also presents various useful equations such as the differential equation for generating functions for birth and death processes The text can prove valuable for biochemists cellular biologists and researchers in the medical and chemical field who are tasked to perform data analysis **Network Models in Population Biology** E. R. Lewis,2012-12-06 This book is an outgrowth of one phase of an upper division course on quantitative ecology given each year for the past eight at Berkeley I am most grateful to the students in that course and to many graduate students in the Berkeley Department of Zoology and Colleges of Engineering and Natural Resources whose spirited

discussions inspired much of the book's content I also am deeply grateful to those faculty colleagues with whom at one time or another I have shared courses or seminars in ecology or population biology D M Auslander L Demetrius G Oster O H Paris F A Pitelka A M Schultz Y Takahashi D B Tyler and P Vogelhut all of whom contributed substantially to the development of my thinking in those fields to my Departmental colleagues E Polak and A J Thomasian who guided me into the literature on numerical methods and stochastic processes and to the graduate students who at one time or another have worked with me on population biology projects L M Brodnax S P Chan A Elterman G C Ferrell D Green C Hayashi K L Lee W F Martin Jr D May J Stamnes G E Swanson and I Weeks who together undoubtedly provided me with the greatest inspiration I am indebted to the copy editing and production staff of Springer Verlag especially to Ms M Muzeniek for their diligence and skill and to Mrs Alice Peters biomathematics editor for her patience

Perspectives of Nonlinear Dynamics: Volume 1 E. Atlee Jackson, 1989 The dynamics of physical chemical biological or fluid systems generally must be described by nonlinear models whose detailed mathematical solutions are not obtainable To understand some aspects of such dynamics various complementary methods and viewpoints are of crucial importance In this book the perspectives generated by analytical topological and computational methods and interplays between them are developed in a variety of contexts This book is a comprehensive introduction to this field suited to a broad readership and reflecting a wide range of applications Some of the concepts considered are topological equivalence embeddings dimensions and fractals Poincaré maps and map dynamics empirical computational sciences vis vis mathematics Ulam's synergetics Turing's instability and dissipative structures chaos dynamic entropies Lorenz and Rossler models predator prey and replicator models FPU and KAM phenomena solitons and nonsolitons coupled maps and pattern dynamics cellular automata

The Kowalevski Property Vadim B. Kuznetsov, This book is a collection of survey articles on several topics related to the general notion of integrability It stems from a workshop on Mathematical Methods of Regular Dynamics dedicated to Sophie Kowalevski Leading experts introduce corresponding areas in depth The book provides a broad overview of research from the pioneering work of the nineteenth century to the developments of the 1970s through the present The book begins with two historical papers by R L Cooke on Kowalevski's life and work Following are 15 research surveys on integrability issues in differential and algebraic geometry classical complex analysis discrete mathematics spinning tops Painlevé equations global analysis on manifolds special functions etc It concludes with Kowalevski's famous paper published in Acta Mathematica in 1889 Sur le problème de la rotation d'un corps solide autour d'un point fixe The book is suitable for graduate students in pure and applied mathematics the general mathematical audience studying integrability and research mathematicians interested in differential and algebraic geometry analysis and special functions

New Trends in the Applications of Differential Equations in Sciences Angela Slavova, 2025-06-16 This volume compiles selected papers focusing on the applications of differential equations across various scientific domains presented at the International Conference New Trends in the Applications of Differential Equations

in Sciences NTADES which took place in Saints Constantine and Helena Bulgaria in July 2024 The book is organized around several key themes including applications in mathematical physics mathematical biology financial mathematics fractional analysis numerical methods and neuroscience The covered applications encompass diverse topics such as mechanics neural networks in insurance credit portfolios predator prey systems with fractional derivatives recent findings regarding COVID 19 epidemic waves memristive cellular nonlinear networks and more By promoting fundamental research in mathematics this book aims to develop new methods and techniques that can effectively address real life challenges through the application of differential equations

An Introduction to Mathematical Modeling Edward A. Bender, 2012-05-23 Employing a practical learn by doing approach this first rate text fosters the development of the skills beyond the pure mathematics needed to set up and manipulate mathematical models The author draws on a diversity of fields including science engineering and operations research to provide over 100 reality based examples Students learn from the examples by applying mathematical methods to formulate analyze and criticize models Extensive documentation consisting of over 150 references supplements the models encouraging further research on models of particular interest The lively and accessible text requires only minimal scientific background Designed for senior college or beginning graduate level students it assumes only elementary calculus and basic probability theory for the first part and ordinary differential equations and continuous probability for the second section All problems require students to study and create models encouraging their active participation rather than a mechanical approach Beyond the classroom this volume will prove interesting and rewarding to anyone concerned with the development of mathematical models or the application of modeling to problem solving in a wide array of applications

mathematical population dynamics Ovide Arino, 2020-12-18 This book is an outcome of the Second International Conference on Mathematical Population Dynamics It is intended for mathematicians statisticians biologists and medical researchers who are interested in recent advances in analyzing changes in populations of genes cells and tumors

Matrices and Graphs Stability Problems in Mathematical Ecology D. Logofet, 2018-02-01 Intuitive ideas of stability in dynamics of a biological population community or ecosystem can be formalized in the framework of corresponding mathematical models These are often represented by systems of ordinary differential equations or difference equations Matrices and Graphs covers achievements in the field using concepts from matrix theory and graph theory The book effectively surveys applications of mathematical results pertinent to issues of theoretical and applied ecology The only mathematical prerequisite for using Matrices and Graphs is a working knowledge of linear algebra and matrices The book is ideal for biomathematicians ecologists and applied mathematicians doing research on dynamic behavior of model populations and communities consisting of multi component systems It will also be valuable as a text for a graduate level topics course in applied math or mathematical ecology

Management and Analysis of Biological Populations B.-S. Goh, 2012-12-02 Management and Analysis of Biological Populations demonstrates the usefulness of optimal control theory in the

management of biological populations and the Liapunov function in simulating an ecosystem model under large perturbations of its initial state and continual disturbances on its dynamics The first chapter of the book introduces the topic by presenting the different models in ecology and discussing the stability concepts the ecological engineering and various relevant functions in ecosystem modeling The next chapter contains a brief survey of static optimization techniques and optimal control theory for systems which are modeled by differential and difference equations Another chapter covers methods that use Liapunov and Liapunov like functions to establish that a given population model is stable relative to finite perturbations of its initial state and that it is non vulnerable relative to large continual disturbances The book also covers fisheries and logistic modeling including a discussion of a few management problems Moreover this reference considers stability in an ecosystem model with complexities due to species richness nonlinearities time delays and spatial heterogeneity Finally it explains how to manage pests and greenhouse crops The book is an excellent reference source for students and professionals in ecology and environmental engineering Research professionals and extended workers in agriculture and agronomy will also find this book invaluable

Energy Conservation Measures J. D.
