Nonlinear Physics With Maple For Scientists And Engineers:

Nonlinear Physics with Maple for Scientists and Engineers Richard Enns, George McGuire, 2013-11-27 Philosophy of the Text This text has been designed to be an introductory survey of the basic concepts and applied mathematical methods of nonlinear science Students in engineering physics chemistry mathematics computing science and biology should be able to successfully use this text In an effort to provide the students with a cutting edge approach to one of the most dynamic often subtle complex and still rapidly evolving areas of modern research nonlinear physics we have made extensive use of the symbolic numeric and plotting capabilities of Maple V Release 4 applied to examples from these disciplines No prior knowledge of Maple or computer programming is assumed the reader being gently introduced to Maple as an auxiliary tool as the concepts of nonlinear science are developed The diskette which accompanies the text gives a wide variety of illustrative nonlinear examples solved with Maple An accompanying laboratory manual of experimental activities keyed to the text allows the student the option of hands on experience in exploring nonlinear phenomena in the REAL world Although the experiments are easy to perform they give rise to experimental and theoretical complexities which are not to be underestimated The Level of the Text The essential prerequisites for the first eight chapters of this text would normally be one semester of ordinary differential equations and an intermediate course in classical mechanics Nonlinear Physics with Maple for Scientists and Engineers Richard H Enns, George C McGuire, 2000-05-11

Nonlinear Physics with Maple for Scientists and Engineers / Experimental Activities in Nonlinear Physics Richard Enns, George McGuire, 1997-03-20

Laboratory Manual for Nonlinear Physics with Maple for Scientists and Engineers Richard H. Enns, George McGuire, 2012-12-06 Science demands that all theory must be checked by experiment Richard Feynman Nobel Laureate in physics 1965 reminds us in a wonderful quote that The test of all knowledge is experiment Experiment is the sole judge of scientific truth 1 It is because nonlinear physics can be so profoundly counter intuitive that these laboratory investigations are so important This manual is designed to be used with the text Nonlinear Physics with Maple for Scientists and Engineers Understanding is enhanced when experiments are used to check so please attempt as many of the activities as you can As you perform theory these activities we hope that you will be amazed and startled by strange behavior intrigued and terrorized by new ideas and be able to amaze your friends as you relate your strange sightings Remember that imagination is just as important as knowledge so exercise yours whenever possible But please be careful as nonlinear activities can be addicting can provide fond memories and can awaken an interest that lasts a lifetime Although it has been said that a rose by any other name is still a rose with apologies to Shakespeare the authors of this laboratory manual have in an endeavor to encourage the use of these nonlinear investigations called them experimental activities rather than experiments A number of design innovations have been introduced A *Nonlinear Physics with Mathematica for Scientists and Engineers* Richard H. Enns, George C. McGuire, 2012-12-06 Nonlinear physics continues to be an area of dynamic modern research with

applications to physics engineering chemistry mathematics computer science biology medicine and economics In this text extensive use is made of the Mathematica computer algebra system No prior knowledge of Mathematica or programming is assumed This book includes 33 experimental activities that are designed to deepen and broaden the reader's understanding of nonlinear physics These activities are correlated with Part I the theoretical framework of the text Chaos and Nonlinear Dynamics Robert C. Hilborn, 2000 This book introduces readers to the full range of current and background activity in the rapidly growing field of nonlinear dynamics It uses a step by step introduction to dynamics and geometry in state space to help in understanding nonlinear dynamics and includes a thorough treatment of both differential equation models and iterated map models as well as a derivation of the famous Feigenbaum numbers It is the only introductory book available that includes the important field of pattern formation and a survey of the controversial questions of quantum chaos This second edition has been restructured for easier use and the extensive annotated references are updated through January 2000 and include many web sites for a number of the major nonlinear dynamics research centers With over 200 figures and diagrams analytic and computer exercises this book is a necessity for both the classroom and the lab **Maple V by Example** Martha L. Abell, James P. Braselton, 1999 Accompanying CD ROM includes all Maple V input that appears in the book

Mathematical Methods for Physics J. R. Claycomb, 2018-04-19 No detailed description available for Mathematical Methods for Physics *Computer Algebra Recipes for Mathematical Physics* Richard H. Enns, 2006-03-20 Over two hundred novel and innovative computer algebra worksheets or recipes will enable readers in engineering physics and mathematics to easily and rapidly solve and explore most problems they encounter in their mathematical physics studies While the aim of this text is to illustrate applications a brief synopsis of the fundamentals for each topic is presented the topics being organized to correlate with those found in traditional mathematical physics texts The recipes are presented in the form of stories and anecdotes a pedagogical approach that makes a mathematically challenging subject easier and more fun to learn This is a self contained and standalone text using MAPLE that may be used in the classroom for self study as a reference or as a text for an online course *Differential Equations with Maple* Jon Davis, 2012-12-06 Differential equations is a subject of wide applicability and knowledge of differential equations is a subject of wide applicability and knowledge of differential equations equations topics permeates permeates all areas of study in engineering engineering and applied mathematics Some differential equations are susceptible to analytic means of solution while others require the generation of numerical solution trajectories to see the behavior of the system under study For both situations the software package Maple can be used to advantage To the student Making effective use of differential equations requires facility

facility in recognizing and solving standard tractable problems as well as having the background in the subject to make use of tools for dealing with situations that are not amenable to simple analytic approaches *Dynamical Systems with Applications using MAPLE* Stephen Lynch, 2013-11-11 This book provides an introduction to the theory of dynamical systems with the aid of the Maple algebraic manipulation package. It is written for both senior undergraduates and first year graduate students. The first half of the book deals with continuous systems using ordinary differential equations. Chapters 1-12 and the second half is devoted to the study of discrete dynamical systems. Chapters 13-20. The author has gone for breadth of coverage rather than fine detail and theorems with proof are kept at a minimum. The material is not clouded by functional analytic and group theoretical definitions and so is intelligible to readers with a general mathematical background. Some of the topics covered are scarcely covered elsewhere. Most of the material in Chapters 9-12, 16-17, 19 and 20 is at postgraduate level and has been influenced by the author's own research interests. It has been found that these chapters are especially useful as reference material for senior undergraduate project work. The book has a very hands-on approach and takes the reader from the basic theory right through to recently published research material. Computer Algebra Recipes Richard Enns, George C. McGuire, 2013-03-07 Computer algebra systems have the potential to revolutionize the teaching of and learning of science. Not only can students work thorough mathematical models much more efficiently and with fewer errors than with pencil and paper, they can also work with much more complex and computationally intensive models. Thus for example in studying the flight of a golf ball, students can begin with the simple parabolic trajectory but then add the effects of lift and drag of winds and of spin. Not only can the program provide analytic solutions in some cases, it can also produce numerical solutions and graphic displays. Aimed at undergraduates in their second or third year, this book is filled with examples from a wide variety of disciplines including biology, economics, medicine, engineering, game theory, physics, chemistry. The text is organized along a spiral, revisiting general topics such as graphics, symbolic computation and numerical simulation in greater detail and more depth at each turn of the spiral. The heart of the text is a large number of computer algebra recipes. These have been designed not only to provide tools for problem solving but also to stimulate the reader's imagination. Associated with each recipe is a scientific model or method and a story that leads the reader through steps of the recipe. Each section of recipes is followed by a set of problems that readers can use to check their understanding or to develop the topic further. **Computer Algebra Recipes for Classical Mechanics** Richard H. Enns, George C. McGuire, 2012-12-06 Hundreds of novel and innovative computer algebra recipes will enable readers starting at the second year undergraduate level to easily and rapidly solve and explore most problems they encounter in their classical mechanics studies. Using the powerful computer algebra system MAPLE Release 8, no prior knowledge of MAPLE is presumed; the relevant command structures are explained on a need-to-know basis.

as the recipes are developed This new problem solving guide can serve in the classroom or for self study for reference or as a text for an on line course

Differential Equation Solutions with MATLAB® Dingyü Xue,2020-04-06 This book focuses the solutions of differential equations with MATLAB Analytical solutions of differential equations are explored first followed by the numerical solutions of different types of ordinary differential equations ODEs as well as the universal block diagram based schemes for ODEs Boundary value ODEs fractional order ODEs and partial differential equations are also discussed

Computer Algebra Recipes Richard H. Enns,George C. McGuire,2007-12-31 This book presents a large number of computer algebra worksheets or recipes that have been designed using MAPLE to provide tools for problem solving and to stimulate critical thinking No prior knowledge of MAPLE is necessary All relevant commands are introduced on a need to know basis and are indexed for easy reference Each recipe features a scientific model or method and an interesting or amusing story designed to both entertain and enhance concept comprehension and retention

It's a Nonlinear World Richard H. Enns,2010-10-14 Drawing examples from mathematics physics chemistry biology engineering economics medicine politics and sports this book illustrates how nonlinear dynamics plays a vital role in our world Examples cover a wide range from the spread and possible control of communicable diseases to the lack of predictability in long range weather forecasting to competition between political groups and nations After an introductory chapter that explores what it means to be nonlinear the book covers the mathematical concepts such as limit cycles fractals chaos bifurcations and solitons that will be applied throughout the book Numerous computer simulations and exercises allow students to explore topics in greater depth using the Maple computer algebra system The mathematical level of the text assumes prior exposure to ordinary differential equations and familiarity with the wave and diffusion equations No prior knowledge of Maple is assumed The book may be used at the undergraduate or graduate level to prepare science and engineering students for problems in the real world or for self study by practicing scientists and engineers

System Simulation Techniques with MATLAB and Simulink Dingyü Xue,Yang Chen,2013-09-16 System Simulation Techniques with MATLAB and Simulink comprehensively explains how to use MATLAB and Simulink to perform dynamic systems simulation tasks for engineering and non engineering applications This book begins with covering the fundamentals of MATLAB programming and applications and the solutions to different mathematical problems in simulation The fundamentals of Simulink modelling and simulation are then presented followed by coverage of intermediate level modelling skills and more advanced techniques in Simulink modelling and applications Finally the modelling and simulation of engineering and non engineering systems are presented The areas covered include electrical electronic systems mechanical systems pharmacokinetic systems video and image processing systems and discrete event systems Hardware in the loop simulation and real time application are also discussed Key features Progressive building of simulation skills using Simulink from basics through to advanced levels with illustrations and examples Wide coverage of simulation topics of applications from engineering to non engineering systems Dedicated chapter on hardware in the loop
