Watson, 2020-10-07 This volume contains invited papers presented at the 15th Dundee Biennial Conference on Numerical Analysis held at the University of Dundee in June of 1993 The Dundee Conferences are important events in the numerical analysis calendar and the papers published here represent accounts of recent research work by leading numerical analysts covering a wide range of fields of interest The book is a valuable guide to the direction of current research in many areas of numerical analysis It will be of particular interest to graduate students and research workers concerned with the theory and application of numerical methods for solving ordinary and partial differential equations

Cont Markov Chains Borkar, 1991-04-30 Provides a novel treatment of many problems in controlled Markov chains based on occupation measures and convex analysis Includes a rederivation of many classical results a general treatment of the ergodic control problems and an extensive study of the asymptotic behavior of the self tuning adaptive controller and its variant the Kumar Becker Lin scheme Also includes a novel treatment of some multiobjective control problems inaccessible to traditional methods Annotation copyrighted by Book News Inc Portland OR

Non-Classical Elastic Solids Michele Ciarletta, D. Iesan, 2020-11-26 Problems concerning non classical elastic solids continue to attract the attention of mathematicians scientists and engineers Research in this area addresses problems concerning many substances such as crystals polymers composites ceramics and blood This comprehensive accessible work brings together recent research in this field and will be of great interest to mathematicians physicists and other specialists working in this area

Models of Hysteresis Augusto Visintin, 1993-06-05 Hysteresis effects appear in several physical phenomena such as ferromagnetism ferroelectricity and plasticity They also appear in many fields of engineering This state of the art volume provides a unique insight into this relatively new but rapidly developing topic of applied mathematics

A Survey of Preconditioned Iterative Methods Are Magnus Bruaset, 2018-12-13 The problem of solving large sparse linear systems of algebraic equations is vital in scientific computing even for applications originating from quite different fields A Survey of Preconditioned Iterative Methods presents an up to date overview of iterative methods for numerical solution of such systems

Typically the methods considered are w

Localization and Sheaves Jara Pascual, Conchi Vidal, A Verschoren, 1995-11-30 This book completely solves the problem of representing rings and modules over them which are locally noetherian over subsets of their prime spectrum by structure sheaves over this subset In order to realise this one has to develop the necessary localization theory as well as to study local equivalents of familiar concepts like the Artin Rees property Ore sets and the second layer condition The first part of the book is introductory and self contained and might serve as a starting course at graduate level on localization theory within Grothendieck categories The second part is more specialised and provides the basic machinery needed to effectively these structure sheaves as well as to study their functorial behaviour In this way the book should be viewed as a first introduction to what should be called relative noncommutative algebraic geometry

Harmonic Maps Into Homogeneous Spaces Malcolm Black, 2018-05-04 Harmonic maps and the related theory of minimal surfaces are variational problems of long standing in differential geometry Many important advances have been made in understanding harmonic maps of Riemann surfaces into symmetric spaces In particular twistor methods construct some and in certain cases all such mappings from holomorphic data These notes develop techniques applicable to more general homogeneous manifolds in particular a very general twistor result is proved When applied to flag manifolds this wider viewpoint allows many of the previously unrelated twistor results for symmetric spaces to be brought into a unified framework These methods also enable a classification of harmonic maps into full flag manifolds to be established and new examples are constructed The techniques used are mostly a blend of the theory of compact Lie groups and complex differential geometry This book should be of interest to mathematicians with experience in differential geometry and to theoretical physicists

The Theory of Quantaloids K I Rosenthal, 2014-07-22 This book presents a detailed account of the theory of quantaloids a natural generalization of quantales The basic theory examples and construction are given and particular emphasis is placed on the free quantaloid construction as well as on the perspective provided by enriched categories

Quantum Mechanics D. A. Dubin, Mark A. Hennings, 1990-08-20 These notes present a rigorous mathematical formulation of quantum mechanics based on the algebraic framework of observables and states The underlying mathematics is that of topological algebras locally convex spaces and distribution theory

Semigroups of Operators and Spectral Theory S Kantorovitz, 1995-06-19 This book presents some aspects of the theory of semigroups of operators mostly from the point of view of its interaction with spectral theory In order to make it self contained a concise description of the basic theory of semigroups with complete proofs is included in Part I Some of the author's recent results such as the construction of the Hille Yosida space for general operators the semi simplicity manifold and a Taylor formula for semigroups as functions of their generator are also included in Part I Part II describes recent generalizations most of them in bookform for the first time including pre semigroups semi simplicity manifolds in situations more general than that considered in Part I semigroups of unbounded symmetric operators and an analogous result on local cosine families and semi analytic vectors It is hoped that

this book will inspire more research in this field This book will be of particular interest to graduate students and researchers working operator theory and its applications

Recent Developments in Theoretical Fluid Mechanics G P Galdi,J. Necas,2023-07-21 Including previously unpublished original research material this comprehensive book analyses topics of fundamental importance in theoretical fluid mechanics The five papers appearing in this volume are centred around the mathematical theory of the Navier Stokes equations incompressible and compressible and certain selected non Newtonian modifications

Mathematical Topics in Fluid Mechanics Jose Francisco Rodrigues,Adelia Sequeira,2020-10-02 This Research Note presents several contributions and mathematical studies in fluid mechanics namely in non Newtonian and viscoelastic fluids and on the Navier Stokes equations in unbounded domains It includes review of the mathematical analysis of incompressible and compressible flows and results in magnetohydrodynamic and electrohydrodynamic stability and thermoconvective flow of Boussinesq Stefan type These studies along with brief communications on a variety of related topics comprise the proceedings of a summer course held in Lisbon Portugal in 1991 Together they provide a set of comprehensive survey and advanced introduction to problems in fluid mechanics and partial differential equations

Computational Methods for Fluid-Structure Interaction Jean-Marie Crolet,Roger Ohayon,1994-04-05 Fluid structure interaction is a new theme of investigation in computational methods covering many applications in both engineering and medical sciences This book deals with various examples of interaction between a fluid and a structure and each author presents for the different problems involved the method which is considered to be the most appropriate

Dynamical Systems Rafael Labarca,R Bamon,L Lewowicz,J Palis,1993-02-22 In at least five countries in Latin America high level research in the field in taking place To stimulate this development both at home and abroad Chilean mathematicians have been promoting international meetings like the III International School of Dynamical Systems which took place at the Universidad de Santiago de Chile Santiago in 1990 A number of distinguished mathematicians were present at the meeting side by side with younger people interested in the subject Several of the participants submitted original contributions to these proceedings of the school The topics of the papers are central to dynamics ergodic theory real and complex foliations fractal dimensions polynomial vector fields hyperbolicity and expansive maps Notes on the ergodic theory of plane billiards are also included This book will be of particular interest to researchers and graduate students working in mathematics particularly in ordinary differential equations bifurcation theory and dynamical systems Also those working in mathematical physics and physics

Rings and Radicals R. Wiegandt,J.W. Gardner,Shao-Xue Liu,1996-04-18 First published in 1996 Routledge is an imprint of Taylor Francis an informa company

Multigrid Methods James H Bramble,2019-01-22 Multigrid methods are among the most efficient iterative methods for the solution of linear systems which arise in many large scale scientific calculations Every researcher working with the numerical solution of partial differential equations should at least be familiar with this powerful technique This invaluable book presents results concerning the rates of convergence of multigrid iterations

Topological

Circle Planes and Topological Quadrangles Andreas E Schroth, 1995-11-03 This research note presents a complete treatment of the connection between topological circle planes and topological generalized quadrangles The author uses this connection to provide a better understanding of the relationships between different types of circle planes and to solve a topological version of the problem of Apollonius Topological Circle Planes and Topological Quadrangles begins with a foundation in classical circle planes and the real symmetric generalized quadrangle and the connection between them This provides a solid base from which the author offers a more generalized exploration of the topological case He also compares this treatment to the finite case Subsequent chapters examine Laguerre M bius and Minkowski planes and their respective relationships to antiregular quadrangles The author addresses the Lie geometry of each and discuss the relationships of circle planes the sisters of M bius Laguerre and Minkowski planes and concludes by solving a topological version of the problem of Apollonius in Laguerre M bius and Minkowski planes The treatment offered in this volume offers complete coverage of the topic The first part of the text is accessible to anyone with a background in analytic geometry while the second part requires basic knowledge in general and algebraic topology Researchers interested in geometry particularly in topological geometry will find this volume intriguing and informative Most of the results presented are new and can be applied to various problems in the field of topological circle planes Features
