Technical Artefacts: Creations of Mind and Matter Peter Kroes,2012-05-24 This book presents an attempt to understand the nature of technical artefacts and the way they come into being Its primary focus is the kind of technical artefacts designed and produced by modern engineering In spite of their pervasive influence on human thinking and doing and therefore on the modern human condition a philosophical analysis of technical artefacts and engineering design is lacking Among the questions addressed are How do technical artefacts fit into the furniture of the universe In what sense are they different from objects from the natural world or from the social world What kind of activity is engineering design and what does it mean to say that technical artefacts are the embodiment of a design Does it make sense to consider technical artefacts to be morally good or bad by themselves because of the way they influence human life The book advances the thesis that technical artefacts conceived of as physical constructions with a technical function have a dual nature they are hybrid objects combining physical and intentional features It proposes a theory of technical functions and technical artefact kinds that does justice to this dual nature analyses engineering design from the dual nature point of view and argues that technical artefacts because of their dual nature have inherent moral significance

Linguistics Hermann Moisl, 2015-02-24 The standard scientific methodology in linguistics is empirical testing of falsifiable hypotheses As such the process of hypothesis generation is central and involves formulation of a research question about a domain of interest and statement of a hypothesis relative to it In corpus linguistics the domain is text and generation involves abstraction of data from text data analysis and formulation of a hypothesis based on inference from the results Traditionally this process has been paper based but the advent of electronic text has increasingly rendered it obsolete both because the size of digital corpora is now at or beyond the limit of what can efficiently be used in the traditional way and because the complexity of data abstracted from them can be impenetrable to understanding Linguists are increasingly turning to mathematical and statistical computational methods for help and cluster analysis is such a method It is used across the sciences for hypothesis generation by identification of structure in data which are too large or complex or both to be

interpretable by direct inspection This book aims to show how cluster analysis can be used for hypothesis generation in corpus linguistics thereby contributing to a quantitative empirical methodology for the discipline
