Analysis in Banach Spaces Tuomas Hytönen, Jan van Neerven, Mark Veraar, Lutz Weis, 2016-11-26 The present volume develops the theory of integration in Banach spaces martingales and UMD

spaces and culminates in a treatment of the Hilbert transform Littlewood Paley theory and the vector valued Mihlin multiplier theorem Over the past fifteen years motivated by regularity problems in evolution equations there has been tremendous progress in the analysis of Banach space valued functions and processes The contents of this extensive and powerful toolbox have been mostly scattered around in research papers and lecture notes Collecting this diverse body of material into a unified and accessible presentation fills a gap in the existing literature The principal audience that we have in mind consists of researchers who need and use Analysis in Banach Spaces as a tool for studying problems in partial differential equations harmonic analysis and stochastic analysis Self contained and offering complete proofs this work is accessible to graduate students and researchers with a background in functional analysis or related areas

Elliptic Carleman Estimates and Applications to Stabilization and Controllability, Volume I Jérôme Le Rousseau, Gilles Lebeau, Luc Robbiano, 2022-03-28 This monograph explores applications of Carleman estimates in the study of stabilization and controllability properties of partial differential equations including the stabilization property of the damped wave equation and the null controllability of the heat equation All analysis is performed in the case of open sets in the Euclidean space a second volume will extend this treatment to Riemannian manifolds The first three chapters illustrate the derivation of Carleman estimates using pseudo differential calculus with a large parameter Continuation issues are then addressed followed by a proof of the logarithmic stabilization of the damped wave equation by

means of two alternative proofs of the resolvent estimate for the generator of a damped wave semigroup The authors then discuss null controllability of the heat equation its equivalence with observability and how the spectral inequality allows one to either construct a control function or prove the observability inequality The final part of the book is devoted to the exposition of some necessary background material the theory of distributions invariance under change of variables elliptic operators with Dirichlet data and associated semigroup and some elements from functional analysis and semigroup theory
