Hormones and the Heart in Health and Disease Leonard Share, 1999-06-01 The maintenance of arterial blood pressure and the distribution of blood flow to the various organs of the body depends on the control of the pumping action of the heart and of the resistance of the vascular beds in the individual organs in accordance with their metabolic needs These controls are achieved through the integrated actions of circulating hormones humoral factors that are synthesized and released in the heart and blood vessels and the autonomic nervous system The heart however is not only the target for the direct and indirect actions of a number of hormones and humoral factors it is also an endocrine organ in the traditional sense synthesizing and secreting into the circulation chemical factors that act at distant sites In this treatise *Hormones and the Heart in Health and Disease* we interpret endocrinology broadly and consider traditional hormones as well as autocoids that are secreted by the heart or that act on it In this overview the relevant chapters are indicated in parentheses The discovery of atrial natriuretic peptide ANP atrial natriuretic factor ANF in the 1980s indicated that the heart does indeed function as an endocrine organ in the classic sense ANP Chapter I is synthesized in the heart and secreted into the circulation for actions on the kidney where it is a potent natriuretic agent and on the vasculature where it causes vasodilation ANP can also affect myocardial contractility

practitioners worldwide **Public Health Reports** ,1965 **Drugs in the Management of Heart Disease** A. Breckenridge, 2012-12-06 In any textbook basic scientific knowledge and the art of clinical practice should be brought together in a rational manner and this volume on cardiovascular therapy attempts to achieve this aim It deals with five selected areas hypertension angina and coronary artery disease heart failure and anticoagulant therapy Clearly not all branches of cardiovascular therapeutics could be included a separate section on anti arrhythmic drugs is noticeably absent but it is proposed that this omission will be rectified in other volumes in the series In general textbooks on therapeutics tend to be ephemeral as new discoveries are made and evaluated medical practice changes This volume then summarizes current opinion up to mid 1984 and gives we believe a reasoned account of present views The contributors are all clinical pharmacologists with a wealth of clinical experience The therapeutic advice given is well founded and the underlying scientific basis is clearly explained The book is aimed at postgraduates but should the undergraduate care to dip into it we hope he will be informed and thereby educated A Breckenridge vii Series Editor s Note The last few decades have seen an explosion in our knowledge of cardiovascular disease as a result of research in many disciplines The tempo of research is ever increasing so that it is becoming more and more difficult for one person to encompass the whole spectrum of the advances taking place on many fronts **Physiology of the Heart** Arnold M.
